

Focus... on Storage

The Original .. It's Back!

A Full Featured Internal Storage Solution for the Apple II

Data Storage: Simple & Quick!

Data storage the way it was meant to be: out of sight and out of mind. No more external boxes on your desktop. 'Out of sight' means it goes completely inside your Apple IIe or IIgs computer. 'Out of mind' means no cables to attach and worry about knocking out, no more figuring out where to put it. Introducing Focus Drive. It's transportable! Just remove it from the computer, place it in its original packaging or something similar, and carry it with you to a meeting or friend's computer to exchange data.

Quick and Simple Installation

DOS 3.3 Support

FDOS (FocusDOS) is included on the drive. Just run the installation program and select the amount of 143K Volumes you want and create the partition. When you run FDOS it automatically boots into a DOS 3.3 environment. Most DOS 3.3 software is not specifically hard disk compatible. Some experimentation may be required with software.

16 Bit IDE Interface

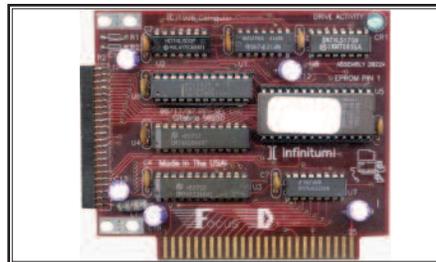

Starting at \$99 for the Focus Card. The Focus Controller card uses 16-bit Enhanced IDE technology for even faster throughput, especially when used with a IIgs & System 6. The Focus Drive is 100% ProDOS compatible and performs very well with all popular applications and other peripheral cards. Conflicts with SCSI cards and accelerators are non-existent. Focus gives the RAMFast a run for it's money! Solid State storage support means even more speed and less worry. No moving parts means nothing mechanical to break down. Bad blocks are nearly a thing of the past.

Easy installation

Installation is a snap. Just pop the lid on your computer system, locate an available slot, line up the edge connector on the Focus card with one of the empty slots (usually slot 7), and gently insert the card. Replace the lid, and you're done. You will probably spend more time getting to your computer than the actual installation itself. Less than five minutes is all you will need to install the card.

A Networking Alternative!

While cable-connected networks are nice, if you need to move files to and from your Apple II, you don't have too many options. With the Focus, you can place your CF card into a card reader on a Windows PC and together with CiderPress 3.0 you'll be able to transfer files to and from the

For Any slotted Apple II or Compatible.

CF card. CiderPress can also make an image and restore that to another CF card or you can clone your Apple II partition and move it to an emulator.

GS/OS Driver & Smartport Compatible

A GS/OS Native Mode device driver is included with the Focus Drive. With this driver installed, drive read time is more than tripled and now rivals the Apple High Speed SCSI card, *without* the use of DMA Technology. A Control Panel is also included for controlling the power saving feature of most 2.5" IDE hard disk drives. Our drive is also 100% Extended Smartport compatible, meaning ProDOS 8 2.0 and higher can see up to 14 partitions online at one time without any modifications or patches.

Great with AppleWorks

Order Today!

A complete Focus Card package is just \$129.00 + shipping. This includes a preformatted CF Card with Apple IIgs System Software 6.0.1 installed along with a variety of other software titles, and ProSEL 16. Or ProSEL 8 and ProDOS 2.0.3 for Apple IIe or compatibles. To receive more information, visit <http://16sector.com/> or email tdiaz@16sector.com
