Sun Remarketing Catalog

New Sun 20 Hard Drive Released for Lisa/XL

This fast new drive opens up a whole new way of life for the Lisa. Run Macintosh software for a fraction of the price of a Mac+ and a hard drive of similar size. See page 3.

HFS - Now Available for the Lisa and MacXL!!!

This, more than anything else, has been on our customer's want list for the Lisa and MacXL. It's here...it really works and it is not just a kluge. Read about it on page 8.

Rec'd 4-22-87

Over 200 Apple /// Products in Stock and Ready to Ship.

There is no company in this whole country that has more products for your Apple /// than Sun. A partial catalog with descriptions can be found beginning on page 4.

Sun Makes a Clean Sweep of Warehouse!

We went and cleaned out of the corners and cubby holes of our warehouses and found some spectacular limited quantity and one-of-a-kind buys. See details page 9.

personal notes

From The Desk of Bob Cook...

We hope you notice and appreciate our new look. Many of our customers have asked that we provide more of a catalog with descriptions of the products we offer. We hope that this will help you in your search and selection of items for your Apple computer.

We also get lots of letters and even more customers on the phone that tell us how much they appreciate our efforts to find and support obsolete Apple products. And, in the future, our plans are to do even more than we are now.

In this issue of Sun Times you'll notice how excited we are about the new Sun 20 Hard Drive for the Lisa and HFS, offering a new dimension to added mass storage capabilities never before available. (see articles next page and page 8.)

There are also some fantastic stock reduction sale values we're offering so that we can make room for anticipated new items to our product line.

Because we appreciate your business and your comments, we hope you will continue to let us know how we can best serve you. To place your order, simply use our handy order form or call our toll-free orderline. For service, support or questions please call our service line. We look forward to hearing from you!

**Bob Cook, President
Sun Remarketing**

here's what's new...

New Sun 20 Breaks Barriers for Lisa and MacXL Owners...

For those of you who have waited patiently for development of additional hard disk storage capacity for your Lisa/Mac XL, your wait is now over. We are now shipping the new Sun 20.

This new drive is designed to fit in either the Lisa 2.0 or the Macintosh XL. It can act as a direct replacement of the Apple Widget 10mb drive and has features that make it the best hard disk system available for your Lisa.

At the heart of this new system is a completely redesigned controller card. The single Sun controller card replaces the five boards used to control the Widget. It not only transfers data much quicker, it is also quieter and requires a whole lot less power.

The installation is quite simple but slightly different for the Lisa and Mac XL. For that reason, when you order, we must know which machine it will be installed in. Just pop off the computer's front cover, remove the drive cage, connect the cables as shown in the documentation provided, tighten down the new drive cage, put the front cover back on and boot up your new system.

You'll find that your new hard disk is ready within seconds and will patiently wait for the diagnostics routine to run its course before opening up to the Macintosh Finder. (We pre-

install MacWorks and our new HFS Startup Disk on new Sun 20 drive we ship.) From there you'll discover a rather remarkable difference in speed.

Built in to the Sun 20 is a buffer which allows information to be sent to the drive immediately and do its waiting there instead of in your computer's memory. Now you can get back to the work at hand much quicker.

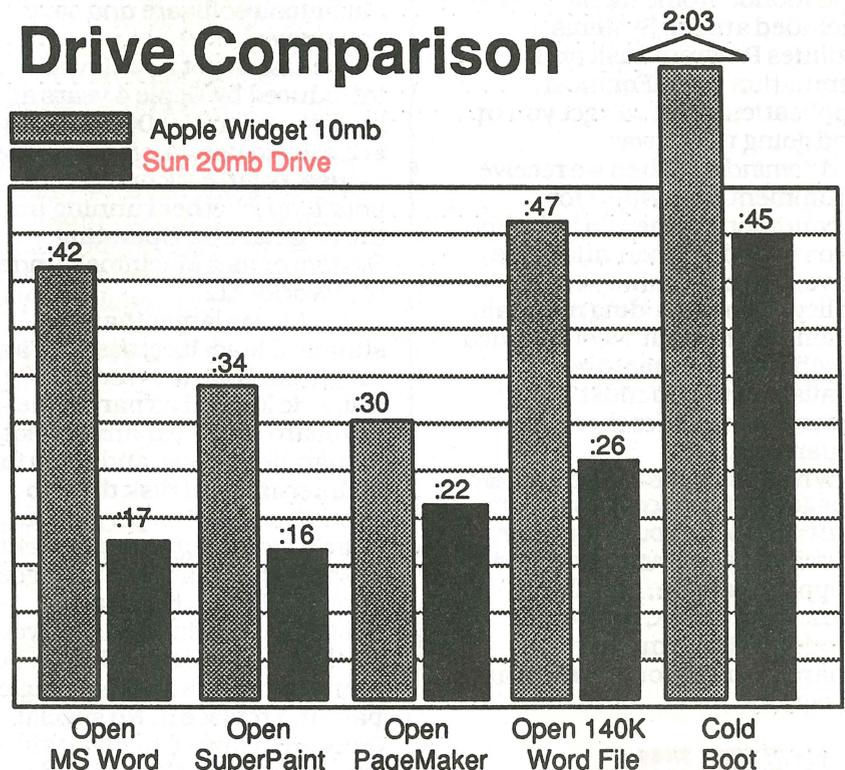

How quick? We did a simple benchmark test to see how the Sun 20 compared with the Widget. The figure on this page illustrates the difference by initiating a cold boot and opening popular applications. Each hard disk had identical files installed on them.

This new hard drive also has some future potential as well. It is capable of handling even larger than 20mb drives if operating under HFS. It also has SCSI capabilities, when such a port becomes available.

All in all, we're pretty happy with our newest support item for the Lisa. The Sun 20 will be available as complete systems or as an upgrade item to your present computer. Please refer to our price list for price list or just give us a call and let us brag!

**SEE OUR RELATED ARTICLE
ON HFS FOR THE LISA AND
MAC XL ON PAGE 8!**

Drive Comparison

The new Sun 20 Hard Drive for the Lisa and Macintosh XL not only provides for larger storage capabilities than ever before but registers a significant increase in efficiency and speed.

computers

Apple ///. Here is a computer that is at home in any business. In fact, some of our best customers are accountants that *would not trade their Apple /// system for anything else!*

It is available beginning with 128K of memory. Our best selling configuration though, is 256K. Many of the software programs that run on the /// require at least that much and it gives you a lot more flexibility.

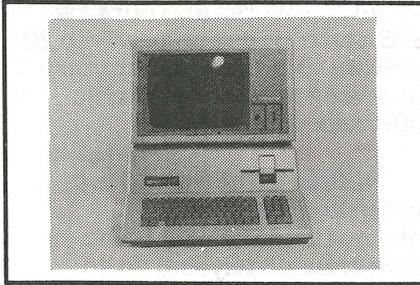

When buying a computer you should first decide what tasks you wish to accomplish with it. You then find software that will do that and *then* match it to the computer. You'll find that for most basic business tasks *the Apple /// can still keep up with the best at a fraction of what others would cost.* In fact, when the Apple /// was first introduced it sold for over \$2200!

Our Apple /// systems come complete with the computer (CPU), an internal disk drive and monochrome monitor. Also included are the Systems Utilities Program Disk and][+ Emulation Disk. For most applications that will get you up and going right away.

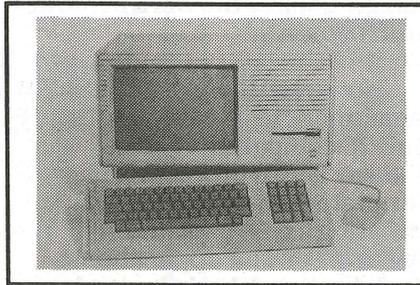

A reminder: When we receive equipment from Apple for reconditioning they do not come to us with documentation. We have, therefore, always had a policy of not including manuals when we price out reconditioned machines. Manuals are available but you must remember to order them separately.

When you order, here are some suggestions of *accessory items that will make you enjoy your purchase even more:* a second floppy disk drive, ProFile or Quark hard disk, printer, modem, Titan emulation boards, and of course, software programs.

Apple /// 128K \$549
Apple /// 256K \$599
Apple /// - ProFile \$999
Apple /// - Titan \$749

Apple ///...the rock of Gibraltar of computers

Run Macintosh software for less...

Lisa Professional. Here is your opportunity to show them all...a computer that is not a no-name clone that will run Macintosh software *and* save you money!

The Lisa is not new. It was introduced by Apple 4 years ago for just under \$10,000. And boy is it easy to use. *Just pick up the mouse, point, click and your on your way* whether running under the original Lisa Operating System or as a Macintosh under MacWorks XL.

The Lisa is larger than the standard Mac. It comes with a 12" rather than a 9" screen a numeric keypad as part of the keyboard, three expansion slots for parallel devices and room for an internal hard disk drive to boot. *It was built to perform as a sturdy piece of office equipment.*

When the Lisa boots up it goes through its own internal diagnostic routine and tells you on the screen where it hurts. You then simply pull out that single part and replace it. No special tools are required to maintain the Lisa either. *All you need is two fingers in order to remove any of its modular components - from disk drive to memory*

boards or power supply.

There are two things you ought to be warned about though, although minor. Not all Mac software is compatible. Of the ones we have tested almost all of the major software programs will run just fine. We do find problems where developers have not stuck to the Mac toolbox and tried to take some programming shortcuts. This is prevelant mostly in games. If you have a question about a specific piece of software, give our service line a call and we'll let you know if it is on our tested list.

Also, the pixels on a Mac screen are square and on the Lisa rectangular. This affects what is called the aspect ratio. A true circle on the Lisa looks like an oval on the screen. This can be corrected with the installation of a Screen Fix Kit when you order. Or, just use the rulers and shift commands available in most draw programs to get around it.

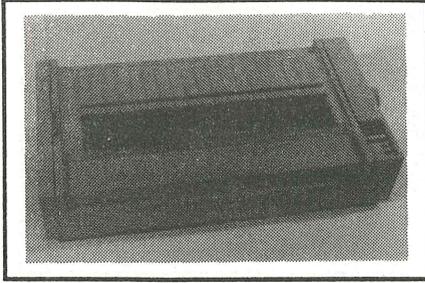

Support...what about future support? A good question. We have been in the support business for the Apple /// for the last 5 years. *We are now offering that same commitment to the Lisa.* Also, up until now, the Lisa would not accept a larger than 10mb hard disk. We have independently spent over \$100,000 just in development costs of a new controller board that removes that inconvenience. And, there are other improvements we're working on right now for release in the future.

So, if you're into desktop publishing, word processing, spreadsheeting or whatever, the Lisa Professional will allow you to *see a whole lot more screen for a whole lot less money.* And for most applications its quite a reasonable alternative.

Lisa Pro - 400K \$799
Lisa Pro - 5mb ProFile \$999
Lisa Pro - 10mb HD \$1495
Lisa Pro - 20mb HD w/HFS \$1995

See HFS article on page 8.

printers

Best Selling Printer

Imagewriter I Printer. Now here is a real printer! With the Imagewriter you can create a paper copy of almost anything you can create on the screen. This is the original Imagewriter printer that quickly became the number one selling printer in the world.

It's actually more than a printer. Inside it contains its own microprocessor, allowing it to work on its own with the data it receives from your computer. It can store tabulating commands and fill out forms, printing both backwards and forwards while moving the paper both up and down. It can print foreign language characters from its built-in fonts, and even reproduce alphabets of special symbols you have designed. It can underline your text or print it in boldface, with a wide range of character and line spacing options. Finally, it can print drawings: graphs, pictures and diagrams, for example.

Team up the Imagewriter with your computer and you'll have a whole new kit of tools.

Accessory kits are available for most Apple computers or use a regular serial and modem eliminator cable combination to hook up to any RS232 port. Cables are sold separately.

Imagewriter I 15" carriage \$445

QMS-PS 800 Laser Printer.

Nothing completes your system better than the addition of a Laser Printer. Here is a printer that is every bit as good as any on the market but priced a little bit less.

The PS 800 is completely compatible with systems using AppleTalk™ and utilizes the full power of the PostScript™ language to produce high quality output. The print engine is the industry standard Canon with 300 dots per inch (dpi) resolution and a maximum printing speed of 8 pages per minute.

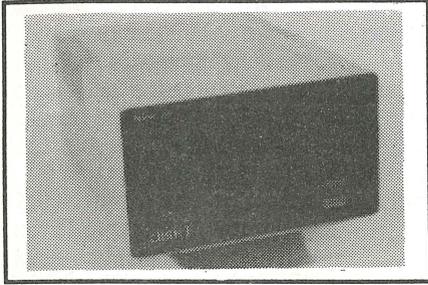

Now you can get the advantages of high quality output of type and graphics on your computer right onto standard copier paper. This makes a perfect companion to the Lisa Professional for outstanding proposals, newsletters, graphics, etc.

You can connect your computer through an AppleTalk network connector or direct. It will also emulate popular letter quality printers. The PS 800 has a built-in emulator for the Diablo 630 printer.

Again, cables are not included and can be purchased separately to satisfy your particular needs. The manual to the QMS printer is quite complete and even includes two books on the PostScript language.

QMS-PS 800 \$3995
PS 800 with plus kit 4495

disk drives

Disk II 5 1/4" Drive

Disk II. The one way to best increase the capability of your Apple II is by expanding its memory capacity. The Disk II is a 5 1/4" floppy disk drive that plugs directly into a disk controller card in the Apple II, II+ or IIe. It will also work on the IIc or IIgs smartport with the addition of a DB-19 adapter cable. Or, you can use the Universal Disk Controller Card (UDC) on the IIgs and IIe as well.

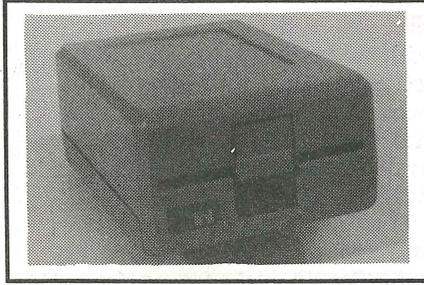

The Disk II comes with an attached cable that interfaces with the standard disk controller card (sold separately). You can fit 2 disk drives to each controller card and up to 3 controller cards into one computer.

Its memory capacity for a single sided diskette is 140K. These drives are reconditioned and are in short supply so, please call first to insure availability.

Disk II \$99
Disk II with interface \$149
Disk II with UDC \$189

Disk ///. This is the most standard way to increase your system's available storage capacity on the Apple ///.

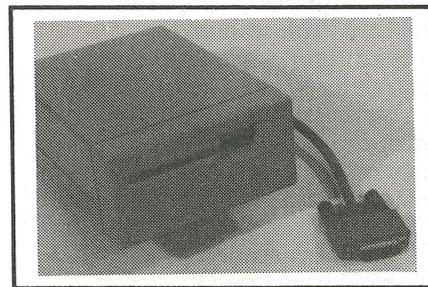

As your storage requirements increase, expand your system's capacity with the Disk /// - a reliable 5 1/4" floppy disk drive. The Apple /// can accommodate up to three Disk ///'s in addition to its one built-in drive, for a total on-line storage capacity of 560,000 bytes. With the attached cable simply plug your Disk /// into the appropriate port on the back of your Apple ///. (The ///+

Disk /// 5 1/4" Drive

requires an adapter, sold separately.) You can then daisy-chain an additional two drives for a total of 4 disk drives on your system.

Disk /// \$190
///+ Adapter \$20

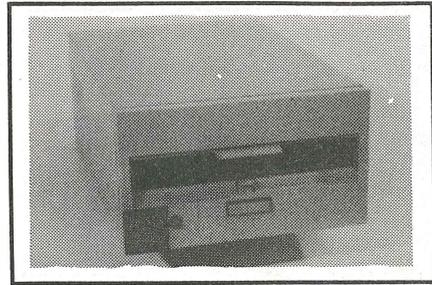

Apple 3 1/2" 400K Drive

Apple 400K External. This is one of the most reliable disk drives on the market. It was made by Sony and comes complete with attached cable for instant hookup.

We were able to buy these drives from a company, who was trading in for double-sided drives, at a great price and are passing along the savings to you. They are completely reconditioned in our service department and come with a 90 day warranty.

Although this drive was intended for the Macintosh it will work on the II, II+, IIe and IIgs with the use of a Universal Disk Controller Card (UDC).

Mac 400K Drive \$79
400K Drive with UDC \$189

MicroSci Double-Sided Drive for Apple ///

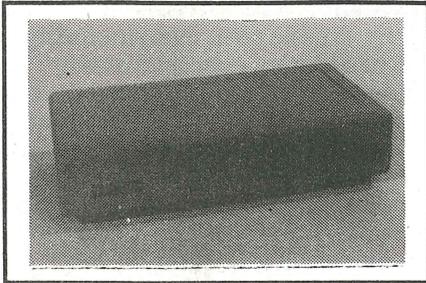

MicroSci A143. Here's a way to add the capacity of 4 disk drives in the form of only one. The A143 is a 140 track, double-sided (96 tracks per inch) drive with a useable storage capacity of 573,440 bytes. It provides faster access time and a much greater disk capacity.

It connects directly to the Apple /// through its built-in disk controller port and does not use one of the four expansion slots. It offers read/write compatibility with the standard Apple /// disk. In other words, you can format and use a regular 140K Disk /// disk in the A143 but you cannot use a disk formatted for the dual-sided format in the Disk ///.

An attached cable and appropriate driver is included. You can daisy-chain the MicroSci drive from a Disk /// as long as the A143 is the final drive in that chain.

MicroSci A143 \$275

hard drives

ProFile Hard Disks - In Stock

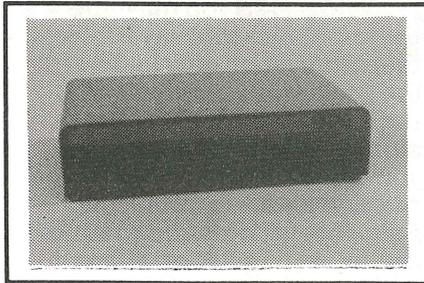

ProFile Hard Disk. For those of you who need even more storage, there's the ProFile™, Apple's 5 and 10-megabyte hard disk mass storage systems. Just to illustrate, the 5Mb ProFile will handle as much information as 35 floppy disk drives. It can store the equivalent of 1,200 pages of single-spaced, typed text.

The ProFile is fast, quiet and fits neatly on top of the Apple /// between the CPU and the monitor. It can also be used on the Apple II, II+ and IIe. When ordering let us know which computer you will be using it with so we can provide the proper accessory kit (included in price). The kit includes the appropriate interface card, cable and software driver, if applicable.

The ProFile has a proven track record and each one shipped from Sun has to perform up to certain levels throughout a 48 hour testing cycle. It requires the use of one of the expansion slots. More than one ProFile can be hooked up to your computer by inserting an interface card for each and addressing them by unique names.

The 5mb model is in good supply but the 10mb is not. So, please call before you order to insure availability. Some additional items you should consider when purchasing your ProFile for an Apple /// would be: Backup /// Utility, Catalyst Program Selector or Habadex.

ProFile 5mb \$595
ProFile 10mb \$999

Versatile Quark Drives - 10 and 20 mb

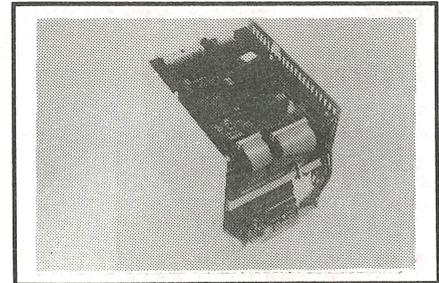

Quark Hard Drives. From the people who brought you Catalyst, the best seller among hard disk program selectors for the Apple, comes a line of hard disks that are really quite versatile.

Take your choice of the QC10 (10mb) and QC20 (20mb) hard disks. These are as hard working as they are reliable. By just activating a switch on the back of the drive you can offer the power of mass storage to an Apple IIe, Apple IIc, Apple /// or Macintosh (even without the SCSI port). The Quark drives hook up directly to the external floppy port and do not require additional interface cards.

These are completely new drives and come with a 90 day warranty. They sold originally for \$1295 and \$1795 respectfully, but now at Sun you can save hundreds.

When ordering please let us know what computer you will be using them on so we can include the proper cable and software.

Quark QC10 \$795
Quark QC20 \$895

A Faster and Larger Lisa/XI Alternative

Sun 20 Hard Drive System. One of the Lisa's shortcomings used to be that you were limited to only 10mb of internal disk storage. Well, no longer. After being asked by Apple to take over support of the Lisa (MacXL) we started work on developing a solution, and along with ProApp and Apple came up with a completely redesigned hard disk controller card...the Sun 20.

This new card not only solved the amount of storage challenge but also sped up the transfer of data remarkably (as much as three times in some cases). A built-in buffer allows information to be sent to the drive which allows you to get right back to work instead of "hurry up and wait". In fact, the Sun 20 drive is ready to work for you long before the system's self-test has finished. It also operates on a great deal less power.

The Sun 20 is made to fit into the Lisa 2.0 or the MacXL with just the use of two fingers. Simply pull out your current drive cage and slip in our new one. We include at no extra cost our Sun Hard Disk Startup which allows the use of HFS. (see article page 8)

Please let us know upon ordering which machine it is to be installed in so we can ship the appropriate hardware for hookup. We pre-load MacWorks, the System and Finder on each disk after testing at the factory. The Sun 20...a great way to upgrade your Lisa or MacXL.

Sun 20 Hard Drive System \$1195
Widget Trade-in \$200

See HFS article on page 8.

When You Wish Upon a Star It Makes a Difference, Just Where in the HFS Are You?

Since assuming support for the Lisa (Macintosh XL), users have called us with their wish list of things they would like to see available for their computers. Right at the top of the list was more storage capabilities and HFS.

Since the new Sun 20 Hard Disk Drive satisfied the first, our new Sun HFS Hard Disk Startup Disk satisfies the second. And, boy is it satisfying.

For those of you that aren't familiar with HFS let us give you a short primer of its abilities and features. HFS (Hierarchical Filing System) is the replacement of the original MFS (Macintosh Filing System). The treatment of files as compared to the file cabinet analogy is carried out to its maximum in that HFS is a much more efficient way of handling files as well as having the capability of keeping track of many more files than MFS ever thought of tracking.

Here is an easy-to-understand example as explained by one of our service technicians: Any folder under HFS acts much like the branch on a tree. For example, you may have 300 files on your hard disk. Under MFS (the only system currently available to Lisa users) the computer must keep track of all 300 files whenever you go to the finder. That is why it takes so long to quit a program. It must rebuilt that complete file structure before building the desktop.

Under HFS you may put those 300 files into say 8 folders, then the system only looks at the 8 folders as files instead of the 300 individual files. By storing a folder within a folder you can store a lot of files on a huge disk with no problems. Even files with identical names can be saved withing different folders and manipulated independently without contaminating one another. Under MFS the total number of files on a disk has been somewhat limited.

Another problem that HFS under MacWorks XL has solved is that now you may write more that 16 megs of information onto a single drive, such as our new Sun 20 internal hard disk for the Lisa. And lastly, it also allows the Lisa to keep up with the newer programs by taking full advantage of their use of the Hierarchical Filing System.

A warning though: This program is not an "officially" released piece of software and does not purport to be fully tested. We are making it

available to users at a reasonable cost, even including it at no extra charge, already installed on our new hard disk drives, and with documentation that will give you some good hints on how to take advantage of its capabilities. But, so far, in our in-house testing it has performed admirably.

It is installed quite easily and is shipped on a disk that contains a special system file as well as a self-installtion program. Just follow the prompts and you're up and running under HFS in no time at all. It's installation does require the initialization of your hard disk so, you must back up your data prior to installation. The installation disk then becomes your boot disk. Upon boot, the system will ask for the startup disk before loading your hard disk. It's very similar to using a key disk with a copy protected program.

This is a product that you can genuinely get excited about! See our price list for pricing details.

Data Base and Records Mgmt.

/// E-Z Pieces. See description under Integrate Software.

Mail List Manager.

Maintains and generates mailing lists. Stores up to 960 entries on one floppy disk; any number of disks may be combined to create a larger mailing list. Fast sorting routines allow user to sort an entire disk of mailin labels in less than two minutes. **Apple Computer.**

Mail List Manager \$75

Quick File ///. Here is an easy-to-use filing system for managing small to medium-size collections of information. With **QuickFile ///**, a doctor, small business owner, homemaker, or scientist can quickly turn receipts, notes, lists and schedules into coherent files and reports. It allows simple arrangement of records in alphabetic, numeric, date or time order. It can selectively search, display and summarize records as well as calculate totals and subtotals of numeric information. In addition, it incorporates both tabular and record presentation, complete sorting and selection, calculated columns and group totals, and flexible report generation. Output format is compatible with AppleWriter /// and ///E-Z Pieces. **Apple Computer.**

Quick File /// \$75

Apple File ///. Lets user store, arrange, and reveiw records, and print reports with data summarized in totals, averages, and counts. Handles large files. Maximum file size of 16 megabytes with up to 80 fields per record. For a 100-character record with three record keys, allows 20,000 to 30,000 records per ProFile hard disk system. Features such as password and entry rules ensure data integrity and security. Requires hard disk. **Apple Computer.**

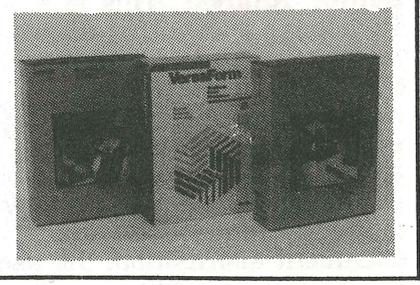

Apple File /// \$50

PFS: File. File allows the user to set up a data base with variable field sizes, and allows storage and retrieval of upto 32,000 entries. A form-oriented information management system, it lets you arrange information in user-defined "forms" and even allows chages to the original form without having to redo the information it contains. Includes a report generator. **PFS.**

PFS:File \$89

Keystroke Data Base and Report Generator. Relational data base and report generator. Exchanges data with VisiCalc, merges data for Apple Writer and Word Juggler; converts Quick File and PFS:File data into keystroke. Features computed and default fields, field formatting, scratch pad, flexible report design and report previewing and highlighting. **Brock Software Products.**

Keystroke Data Base \$150
Keystroke Report Gen. \$50

Financial Modeling & Analysis

VersaForm. VersaForm incorporates a powerful and flexible set of user friendly procedures which allows a non-programmer to set up business forms, store them as files and generate analyses and management reports from their data. A rich set of automatic-filing, data-entry-checking and calculation options may be chosen to enhance accuracy and speed input. A data-base reporting system produces detailed summaries of any data items contained within a file of forms. The program can format a printed output to match a preprinted form as though it were manually typewritten. Common applications of VersaForm include invoicing/accounts receivable; purchase order generation/operations management; professional time and billing; estimation/job costing and personnel records/benefit accrual reporting. The hard-disk version allows file sizes of up to 4 megabytes. Data disks may be inter changed between Apple // and Apple /// systems. **Applied Software Technology.**

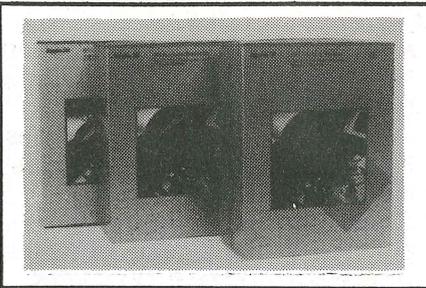

VersaForm \$99

Senior Analyst. This is a modeling package that allows you to create a financial model of virtually unlimited size. It was designed and written to be used by managers and professionals in a corporate environment. Because it's easy to analyze, consolidate and document information, the user can perform complex calculations easily and quickly using the software's more than 20 built-in functions. They include Net Present Value, Compound Growth Rate, three kinds of depreciation, sum, minimum, maximum, linear regression forecast, and more. Sales reports, budgets, and other management information can be merged into one report. In addition, data can be pulled from existing reports to be consolidated into new reports. This financial database feature gives managers tremendous flexibility in creating reports or in viewing and analyzing data. It also features a "spooling" capability, which means that even a long model can begin to print as you continue to do other work on your computer. **Apple Computer.**

Senior Analyst \$75

VisiCalc ///. ViciCalc /// is a powerful "electronic worksheet" version of the well-known VisiCalc software, designed especially for use with the Apple ///. It virtually eliminates calculator, paper, and pencil in developing plans and analyzing results. Its extensive, built-in-library of financial, statistical, scientific and modeling functions take advantage of the Apple ///'s memory. You can quickly and accurately solve just about any problem that can be put in a row- and column format. You don't have to be a programmer to use this as the commands are simple, straightforward and powerful.

VisiCalc /// \$75
VisiCalc Prod. Training Pack \$19

Word Processing & Spell Checking

Script ///. This program is a text formatter for files created by the Pascal Editor. It adds style to printed Pascal text files because it allows the user to format programs, documents - any text using the Apple /// Pascal Editor - with greater ease and flexibility than before. Script /// allows the user to embed commands in an Apple /// Pascal text file and get layout-perfect printouts every time. With it the user can designate line spacing, margins, and page breaks; paginate using headers or footers; and underline, center-, left- and right-justify text. **Apple Computer.**

Script /// \$75

AppleWriter. This is a sophisticated program that turns your system into a sophisticated word processor that allows you to create, edit, format, and print documents. It includes full text-editing capabilities such as find-and-replace, move text, change case, duplicate text, and underline. Print commands can be embedded in the body of the document to provide powerful control and great flexibility in the look and format of final printed text. It also includes the powerful Word Processing Language (WPL) as an added tool for creating and archiving special commands and subroutines. Included in the package is a keyboard template allowing ready reference to

single keystrokes you define for frequently used commands. **APPLE SPELLER** can be run as a menu option of Apple Writer, allowing the user to verify and correct document spelling and return directly to word processing without booting or re-booting either program. The 2.0 version also comes complete with a two-disk training system for new users. Version 1.1 is much the same but will not support the Speller and comes with a little less in the way of documentation. **Apple Computer.**

unique keyboard template. Word Juggler can handle documents up to 254 columns wide. Special printer filters allow the user to take advantage of bold printing, underlining, superscripts and subscripts, and microspace justification can be done with most letter-quality printers. Form letters can also be created with an exclusive "fill-in-the-blank" feature.

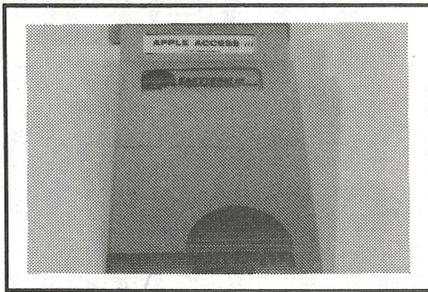

LEXICHECK: A spelling checker included as part of Word Juggler. Lexicheck allows the user to eliminate almost all typographical errors and common misspellings. It can be accessed from Word Juggler with a single keystroke. Long documents are scanned for misspellings as fast as 14,000 words per minute. When you check a document, it will highlight, in context, the first occurrence of each word it doesn't recognize. If the word is actually correct, as in the case of abbreviations or jargon, you can simply add the word to a personal dictionary. If the word is misspelled you can easily correct it. Lexicheck comes with a 50,000 word dictionary. **Quark.**

Word Juggler/Lexicheck \$99
Legal Dictionary \$55

Communications

EasyTerm ///. This is a terminal program that gives the user the ability to send an ASCII file from disk, as well as to receive a file from almost any other computer through a modem. It is much easier to use than most other communications programs. There is a minimum of commands to remember. Uploading and Downloading are as easy as Control-Up-Arrow and Control-Down-Arrow. A direct terminal mode is also supported with speeds of up to 9600 baud. **Sun Remarketing.**

EasyTerm /// \$75

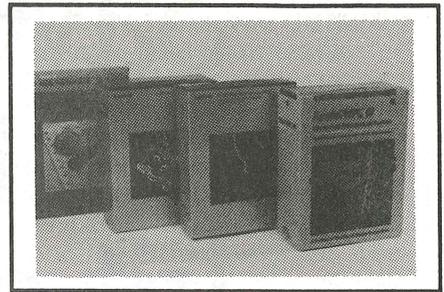

Access ///. This is a popular program that provides you with Digital VT100 and VT52 terminal emulation. It transforms the Apple /// into a conversational terminal that can communicate with a variety of computers and timesharing system. By connection a modem to the Apple /// it allows communication at 110, 300, 1200, 2400, 4800 or 9600 baud. Includes recording to disk and file transmission. You can work with this program off-line, significantly cutting timesharing charges and computer costs. **Apple Computer.**

Access /// \$75

MicroCourier. This communications program for the Apple /// allows you to transmit and receive messages, reports, correspondence - any information - to and from other Apple computers, minicomputers and timesharing systems. It can handle your communications automatically (unassisted) day or night over standard telephone lines. **Apple Computer.**

MicroCourier \$75

Infonet. Infonet is an electronic bulletin board system that allows the user to set up and maintain accounts (mailboxes) with different priority levels for mail or general reading. Different levels are controlled by the system operator through the use of user passwords. Customers can phone in to read what's new. Sales people can

move files from home to work or vice versa. The same system could work quite well for a customer's business, user groups or OEM's. Infonet comes with utilities and file maintenance programs and requires a ProFile Hard Disk or equivalent. **Sun Remarketing.**

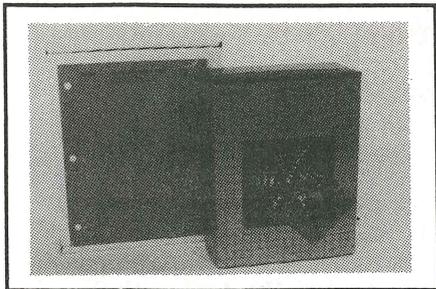

Infonet \$175

Languages

Business BASIC. Business BASIC for the Apple /// is a powerful BASIC language program that is especially adapted for writing programs for a business environment. It incorporates a number of powerful extensions and special features that make it versatile and easy to use. It is the one of the most popular languages found on many minicomputers. It includes easy-to-use graphics and program structures. All BASICs have their own peculiarities, and attempting to get a program to run without understanding the peculiarities of Business BASIC can be frustrating. The program manual is good but, the McGraw-Hill Guide to the Apple /// (available separately) has 6 excellent sections on the language and will ease the new user into it and help the seasoned programmer pick up on this version very easily. **Apple Computer.**

Business BASIC \$75
McGraw-Hill Guide to /// \$14.95

apple /// software

Pascal ///. A general-purpose high-level language, Pascal /// was the first to implement IEEE floating point standard. It offers compiled language which enables programs to execute quickly in minimal space. Its variety of data types, control function, and powerful utility routines can dramatically improve a programmer's productivity on large products. Apple /// Pascal provides the programmer with a high level of portability because it's based on UCSD Pascal, the microcomputer industry standard. Users can access large existing libraries of Pascal programs, and can run Apple /// Pascal programs with minimum conversion on most computer systems offering Pascal. The source program is also compatible with routines written in Apple II pascal, so programs can be easily transported without being redeveloped. **Apple Computer.**

Pascal /// \$65

other upgrades and Pascal items available - see price list page

NPL ///. A valuable tool for sorting and selecting the essential information in datafiles. NPL is a "Fourth Generation Language", a system for application development without conventional programming. For novice and programmers alike. Simpler to use than BASIC or COBOL. **Apple Computer.**

NPL /// \$75

COBOL for the Apple ///.

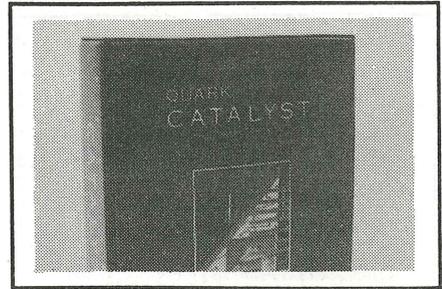

The Apple /// version of COBOL is certified at a higher level than is available for most other minicomputers. Its features take advantage of the larger memory, advanced input/output and the other capabilities of the Apple ///'s Sophisticated Operating System (SOS). It features Animator, a powerful, screen-oriented, source-level debugger. Animator provides an "animated" view of actual program execution, and allows the programmer to run a program one statement at time or continuously while watching its execution. The program can be stopped and the value of any data item checked and changed before continuing. This not only allows programmers to debug an application efficiently, it also makes Apple /// COBOL a good teaching system because the student can actually see his or her code executed. It features FORMS-2, a COBOL source-code generator which lets the programmer begin with a blank screen and end with a fully-operational program. FORMS-2 interactively creates data entry screens and generates COBOL source for use in a program. **Apple Computer.**

COBOL /// \$69

Utilities

Backup ///. This is a backup utility for the ProFile. It has the ability to back up either the entire hard disk or only those files which have been modified since the previous backup. Does not ship automatically with ProFiles shipped from Sun. Must be purchased separately. **Apple Computer.**

Backup /// \$30

Catalyst. This program selector eliminates the need to swap disks when changing applications by permitting the user to boot from the ProFile hard-disk system. Switching from one application to another requires only one keystroke. Many applications can be self-loaded. This is the latest version 2.1. It comes with Discourse Spooler.

DISCOURSE SPOOLER: This is a software print spooler that lets the user take advantage of the Apple ///'s interrupt capability through SOS, send a file to be printed and continue working on another file on the Apple ///. **Quark.**

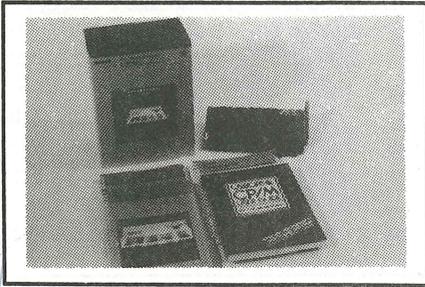

Catalyst /// \$99

RPS ///. RPS - Record Processing Services provides file management service for programs handling large quantities of data. The multkey (up to 8 fields or field segments per key) file access method allows files to be readily interchanged among programs build on RPS. RPS saves software development time and provides compatibility with different applications (such as Apple File and others) and their data files since data is not locked up in any one program. It is a Pascal-based program. Permits both random and sequential access to files.

- Maximum file size - 16 megabytes
- Six access modes
- B+ tree index structure. **Apple Computer.**

RPS /// \$75

apple /// accesories

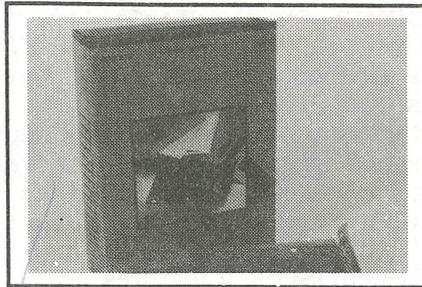

SoftCard ///. The Apple SoftCard // System is a complete hardware and software package that lets you access the many business, science and education applications based on the widely-used CP/M operating system and the Z80 microprocessor. Thanks to the flexible design of the Apple /// and to the Apple ///'s powerful Sophisticated Operating System (SOS), you can now run these CP/M programs AND take advantage of all the benefits offered by Apple's ProFile hard disk mass storage system, as well as the easy configurability of the Apple /// itself.

It will also provide a number of useful utilities, including an 8080 assembler, debugger, editor, and programs for formatting and copying disks. The SoftCard /// lets you use the versatile Microsoft BASIC programming language.

We have upgraded each original package with the latest 2.21 CP/M update.

SoftCard /// CP/M \$79.00

Universal Parallel Interface Card UPIC. The Apple /// Universal Parallel Interface Card is a simple yet powerful extension to your Apple ///. Using nothing other than the UPIC, a supplied cable and the proper driver, you can set up your Apple /// to do eight-bit parallel data transfers either to a printer, or both to and from a terminal or another computer.

The UPIC card installs in one of the expansion slots in the back of your /// (preferably slot 1). It does a great job of supporting graphics commands. Apple ran out of these and the demand was so high that we went to Taiwan and had a new batch manufactured.

UPIC Card and Cable \$75.00

Serial Card ///. If you need to give your Apple /// an additional RS-232C port, this is the way to do it. Apple's Serial Card /// will allow you to connect an additional modem, printer, plotter or other accessory that requires a serial interface. It features an on-board switch that lets it operate as either a printer or modem port.

It installs in one of the Apple ///'s expansion slots.

Serial Card /// \$79.00

Titan ///+II. You've probably notice by now that your standard Apple II emulation disk is quite limiting with many of the most popular programs for the Apple II. Well, you can do better by adding a Titan /// +II card. It brings you up from Apple II emulation at 48K up to 64K. And, with the optional upgrade you can boost the useable emulated memory up to 128K.

**Titan ///+II \$79.00
128K upgrade \$59.00**

Titan ///+IIE. If the above emulation fix is not enough then consider the Titan ///+IIE. Now you can have the ability to emulate and Apple IIE up to 128K on your Apple ///. A nice way to enjoy the best of both worlds.

The system is made up of two interface boards that install in slots two and three in your Apple ///. It included emulation software that supports a full 80-column display, including uppercase and lowercase letters. A serial printer using the Apple ///'s built-in serial port as well as the ProFile hard disk is also supported. You can access the Apple /// clock/calendar, if one is installed from ProDOS.

A speedy ProDOS RAM disk used the Apple ///'s RAM and is automatically available in IIE emulation. And, a fast 128K SOS RAM disk that uses the /// plus IIE's RAM is available in Apple /// operation.

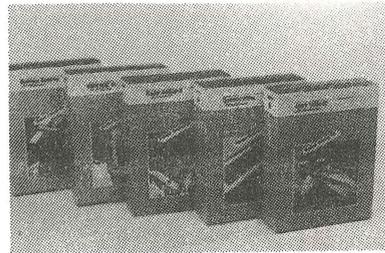

The Titan ///+ IIE works with either a color composite or black and white composite monitor. RGB monitors are not supported. When your not using the IIE emulation, your Apple /// will work as usual.

A great enhancement product that enables you to enjoy almost all Apple III business, educational, and recreational software on your Apple ///, including programs for the Apple II, II+, IIE, and IIC.

Titan ///+IIE \$199.00

MacWorks XL. This is the program that allows you to run Macintosh software on a Lisa. It is included at no additional cost when you purchase any Lisa Professional system from Sun. With MacWorks, you can use your Lisa just as you would a Macintosh.

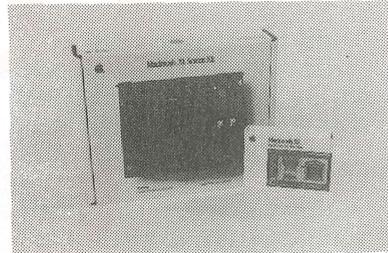

The MacWorks program is used as a boot disk to get you into the Macintosh emulation function. It can be loaded onto a hard disk for automatic startup.

There are some limitations with this program...it is not 100% Macintosh compatible. Most of the popular programs from major developers work just fine. We see problems when developers have taken shortcuts or not stuck strictly to the Mac toolbox. Also games, because of the absence of a four-voice sound generator on the Lisa, can sometimes not work correctly if the developer has not addressed that variable.

Because of the difference between the Macintosh and Lisa screen pixels, everything will appear to be a little bit taller when displayed on the Lisa. Don't worry, though; when you print a document on your Lisa, it will look exactly the way it would of a Macintosh. Also, an optional Screen Modification Kit can correct that problem as well. But, the Lisa screen size is definitely a blessing.

This is a great life extender to the Lisa and well worth the money! A Diskette and manual is provided.

MacWorks XL 3.0 \$125.00

Screen Modification Kit.

This is an optional kit for the Lisa or Macintosh XL that will square up the pixels on the screen to more closely resemble the output when operating under the Macintosh System. In other words, squares look square and circles look round on the screen as well as the printed output.

The installation of this kit **MUST** be done by a qualified technician. We will install it in our service center or you must sign a legal release of liability before we ship the product as it can be very dangerous when working around the video portion of your computer.

The only documentation included is strictly software related, Apple taking for granted that only qualified personnel would handle field installation.

It does require that your hard disk be dedicated strictly to MacWorks. All 7/7 files should be removed. Included are new ROM's, software and a transformer.

This a valuable fix for those using paint, draw or desktop publishing programs such as Pagemaker.

Screen Mod. Kit \$79.00

Lisa 7/7 Office System. This is one of the first really user friendly software systems. There are still lots of people that will use nothing else. Seven integrated programs are combined to complete this package with the most valuable applications wanted in most offices.

The applications included are: LisaCalc, LisaTerminal, LisaDraw, LisaGraph, LisaList, LisaProject and LisaWrite. Taken individually, each is a powerful professional office tool. Taken together, they allow you to do things that simply weren't possible before.

To take full advantage of Lisa 7/7 you'll need a Lisa 2 with 1 megabyte of main memory and a hard disk. The hard disk, under usual circumstances can be partitioned to run both the Lisa system and MacWorks.

Lisa 7/7 Office System \$295.00

AST RAMSTAK. Ever run out of memory on you Lisa/MacXL? here is the solution. Add an additional 1 1/2 megabytes for up to 2 full mb of RAM and take advantage of such programs as OverVue, Omnis 3, Ewcell, Jazz, Switcher, PageMaker and more.

This is a single-slot memory expansion board that is fully compatible with Apple's 512K memory board. Fully populated this board will take you to new heights in productivity on your Lisa. AST is a company with great pride and experience. Each board comes with a 2-year limited warranty.

AST 1 1/2 Mb RAMSTAK \$699

Sun HFS Hard Disk

Startup. For those of you who want better compatibility with the Macintosh System this is the simplest most complete solution on the market! And, it's about time.

Using this program as your boot or startup diskette you can install the Hierarchical File System (HFS) on a ProFile, Widget or new Sun 20. It makes file management much more efficient and dramatically affects the speed of quitting to the finder. It also allows for a greater amount of files on any disk.

The program is almost self-installing. You must, however, back up all your files first as you must reinitialize your disk and install the new directory. Simply follow the screen prompts and you'll soon see that tiny little HFS pixel in the left portion of the title bar.

Package includes program with latest finder and special XL HFS System, backup diskette and manual with HFS hints and tips.

Sun HFS Startup \$30.00

ORDERING GUIDELINES

- PHONE ORDERS:** We maintain a toll-free line for the convenience of customers placing orders only. Please call **1-800-821-3221**.
- QUESTIONS OR SERVICE:** For questions, order inquiries or service please call our Customer Service Line at **1-801-752-7631**. For Return Authorizations please call **801-752-7631**
- TERMS:** Prepaid, C.O.D., Credit Card. Purchase Orders accepted only from previously approved and rated companies, municipalities and schools, F.O.B. Logan, Utah.
- C.O.D.:** Acceptable by telephone or mail. Payment from customer must be by cash money order, cashiers check or company check. We cannot accept personal checks as payment on C.O.D. parcels.
- CREDIT CARDS:** MasterCard, VISA and American Express are accepted by mail or telephone. Complete order form with card number, name, signature and expiration date. If phoning order please have information accessible.
- DELIVERY:** Orders are normally shipped within 48 hours after receipt of customer's order. Same day shipment requests are subject to an additional service charge. Please allow 7 to 10 working days after your order is placed for normal delivery.
- SHIPPING:** Our normal shipping method is via UPS. Priority Service Shipments (air freight, overnight delivery, Blue Label, etc) are available, upon request, to most areas. Priority Service requests are subject to additional charges. Please contact us for further information.
- HOURS:** Our phone lines are manned 7:30 am to 5:30 pm MST Monday through Friday.
- PRICES:** Prices are subject to change without prior notice.
- AVAILABILITY:** All items are subject to availability and previous sale.
- MINIMUM ORDER:** For service parts we maintain a minimum order limit of \$15.00. For software orders that limit is \$10.00. Any amount under that will automatically be charged the minimum amount plus shipping charges.
- SALES TAX:** Sales tax must be charged to all orders delivered in Utah.
- RETURNED CHECKS:** All checks returned for any reason will be subject to a \$10.00 fee.
- RETURNED MATERIAL:** All returned merchandise must be accompanied by an authorization number. Our Return Merchandise Authorization Department can be reached by calling 801-752-7631. When calling please have a copy of your invoice/packing list available for necessary information. A Return Form accompanies each order. The customer is responsible for the cost of shipping the product to Sun will only pay the return of exchanged or warranted items. We will not accept C.O.D. returns.
- DEFECTIVE MATERIAL-** Claims must be made within 30 days of receipt.
- INCORRECT MATERIAL-** Claims must be made within 10 days of receipt.

special apple /// conference

Apple /// Conference is Scheduled for Later This Year

The Phase /// Conference and Exposition is the first major gathering designed explicitly for the business and professional user of Apple Computers. The seminars have been planned to provide the business/profession user (and developer) with tools and skills to increase productivity and profitability.

Full registration includes 3 days of seminars and workshops, a keynote reception the first evening, a gala banquet the second evening which will feature a major speaker and honor several pacesetters and the pioneers of hardware and software for the Apple family. The first 200 persons registering will also receive invitations to the /// Forever Luncheon which

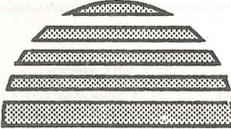

will honor the people that have made major contributions to the continuing value of the Apple ///.

The conference will address issues relevant to business use of all models of Apple computers. Seminars and workshops will be presented on three simultaneous tracks and will include topics ranging from introductory product tutorials, head to head comparisons of competing products, and accounting issues, to advanced classes on specific products. A consistent goal of the conference will be to augment attendees' return on their Apple system investment.

In addition, all attendees will receive full admission to the Phase /// Exhibition. Representatives of a variety of hardware, software, and service providers will be present to suggest solutions to your business problems. Many vendors will be offering special Phase /// discounts.

Conference Dates:
Friday Oct. 2 - Sun. Oct. 4,
1987
Hyatt Regency Woodfield
Schaumburg, Illinois
