

Books

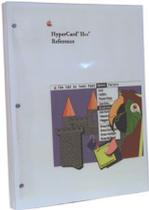

Getting Started with HyperCard IIgs (APDA-48)

Apple Computer

An introductory guide to the HyperCard IIgs hypermedia software from Apple Computer. Learn the basics of this powerful and useful productivity package. Or is it developer software? Who can tell? It's great for both!

\$15.00

HyperCard IIgs Reference (APDA-49)

Apple Computer

This book is the official reference guide to Apple's HyperCard IIgs hypermedia software; it is included with the full HyperCard IIgs package, model number APDA-52.

\$25.00

HyperTalk Beginner's Guide (APDA-50)

Apple Computer

The HyperTalk Beginner's Guide is the official guide to writing programs in HyperTalk, the programming language of HyperCard IIgs. It is included with the complete HyperCard IIgs package, item number APDA-52.

\$15.00

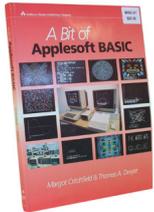

ORCA/Disassembler Manual (BWGS-10)

The Byte Works

Now that ORCA/Disassembler has been reclassified as freeware, you can get the software as a free download. But what about documentation? There are lots of neat features to ORCA/Disassembler that are hard to "get" if you don't have the manual. Syndicomm is the exclusive distributor of the remaining original print run ORCA/Disassembler manuals, published by The Byte Works. Download a copy of the software, then buy the manual from us!

\$7.50

A Bit of Applesoft BASIC (MISC-01)

Syndicomm

A fun and handy guide to learning and using Applesoft BASIC.

\$20.00

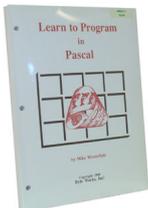

Learn to Program in C (BWGS-19)

The Byte Works

Learn to Program in C is a great book for first-time programmers. It was written specifically for ORCA/C running on an Apple IIGS. It doesn't assume you know anything at all about programming. In fact, it is based on the APS computer science curriculum, a guideline developed by universities for introductory programming courses!

\$35.00

Learn to Program in Pascal (BWGS-17)

The Byte Works

Learn to Program in Pascal is specially-designed for first-time programmers. It was written specifically for ORCA/Pascal running on an Apple IIGS. It doesn't assume you know anything at all about programming. In fact, it is based on the APS computer science curriculum, a guideline developed by universities for introductory programming courses!

\$35.00

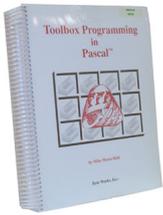

Toolbox Programming in C (BWGS-20)

The Byte Works

Toolbox Programming in C is ready to take you into the exciting and fun world of toolbox programming on the Apple IIGS. You will learn to write desktop applications, handle sound files, print pictures, and much more. This course has been designed with you in mind, whether you're an intermediate program or an advanced Apple IIGS programmer who's just looking for some good examples to follow.

\$50.00

Toolbox Programming in Pascal (BWGS-18)

The Byte Works

Toolbox Programming in Pascal is ready to take you into the exciting and fun world of toolbox programming on the Apple IIGS. You will learn to write desktop applications, handle sound files, print pictures, and much more. This course has been designed with you in mind, whether you're an intermediate programmer with no Toolbox experience or an Apple IIGS expert who wants a handy set of sample programs for reference.

\$50.00

Apple IIGS Firmware Reference (APDA-57)

Apple Computer

The official guide to the firmware of the Apple IIGS computer, this book includes information on the Monitor, SmartPort calls, softswitches, ROM addresses, vectors, and much more.

\$30.00

Apple IIGS GS/OS Reference (APDA-56)

Apple Computer

The official guide to developing software using the GS/OS operating system. Covers GS/OS calls, the System Linker, and the OMF object file format used by relocatable Apple IIGS program files.

\$30.00

Apple IIGS Hardware Reference (APDA-58)

Apple Computer

The official guide to the internals of the Apple IIGS hardware. This book includes details about the video and sound hardware, the Apple Desktop Bus, and details on the slots and ports inside the machine. A must-have guide for serious Apple II programmers, as well as for anyone developing peripherals for the Apple II.

\$30.00

Apple IIGS Toolbox Reference Volume 1 (APDA-53)

Apple Computer

The first volume of the Apple IIGS Toolbox Reference manual. This is your complete source for information about the Apple IIGS Toolbox.

\$45.00

Apple IIGS Toolbox Reference Volume 2 (APDA-54)

Apple Computer

The second volume of the Apple IIGS Toolbox Reference manual. This is your complete source for information about the Apple IIGS Toolbox.

\$45.00

Apple IIGS Toolbox Reference Volume 3 (APDA-55)

Apple Computer

The third volume of the Apple IIGS Toolbox Reference manual. This is your complete source for information about the Apple IIGS Toolbox.

\$55.00

Learn to Program in GSoft BASIC (BWGS-27)

The Byte Works

Haven't you dreamed of writing your own programs? The problem is finding a place to start. Lots of people will sell you a language, and any bookstore has rafts of books that tell you they will teach you to program. Unfortunately, all of them are designed for other computers, or for no computer at all. Many assume you already know a lot about programming, and just want to learn a new language.

\$35.00

Programmer's Reference for 6.0 and 6.0.1 (BWGS-16)

The Byte Works

This is the official reference for Apple IIgs programmers for the new Toolbox and GS/OS functions provided by System 6.0 and 6.0.1. Consider it a fourth volume of the Apple IIgs Toolbox Reference, as well as an addendum to the Apple IIgs GS/OS Reference.

\$35.00

Apple II Appleshare Programmer's Guide (APDA-12)

Apple Computer

This guide describes the Appleshare environment and explains how you can create applications that make use of AppleShare's file server capabilities on an AppleTalk network. You should have a working knowledge of the Apple II family of computers, ProDOS 8 and GS/OS (the Apple II operating systems), AppleTalk protocols, and the LocalTalk cable system to use the ideas presented in this guide. For the Apple II family of computers, the Appleshare environment supports only ProDOS 8 (v 1.5 or later) and GS/OS.

\$30.00

Apple II File Type Notes (APDA-40)

Apple Computer

Apple has turned the complete set of Apple II Technical Notes over to us for distribution. You can buy them all or you can get just the File Type Notes section.

\$20.00

Apple II High-Speed SCSI Card Reference (APDA-10)

Apple Computer

This reference guide to the Apple II SCSI Card offers programmers, peripheral designers, and computer enthusiasts a functional overview of the hardware and software operation of the card.

\$15.00

Apple II Memory Card (Slinky) Reference (APDA-09)

Apple Computer

This beta manual provides a technical description of the Apple II Memory Expansion Card, which can add as much as 1 MB of memory, in 256K increments, to your Apple II computer. If you're a professional programmer or technical enthusiast who wants to use the expanded memory features of the card, you'll appreciate this manual.

\$15.00

Apple IIc Memory Card Reference (APDA-08)

Apple Computer

This reference contains technical data for the Apple IIc Memory Expansion Card. It's written for technical enthusiasts that want to take advantage of the card's expanded memory features.

\$15.00

Apple IIc Technical Reference, 2nd Ed. (APDA-07)

Apple Computer

This is the definitive reference guide to all computers in the Apple IIc family, including the IIc Plus. This edition presents essential details on hardware, memory organization, I/O capabilities, interrupt handling, and Apple IIc Plus microprocessor cacheing techniques. If you're developing software that is to run on all Apple IIc models, this is the book for you!

\$30.00

Apple IIgs Firmware Reference 3.0 Update (APDA-26)

Apple Computer

Since the firmware of the 1 MB Apple IIGS is somewhat different from the firmware of the original Apple IIGS, this update reference fills the gap. It describes all the new features including the System Monitor and Mini-Debugger commands as well as the changes made to the SmartPort firmware and the keyboard interface. A complete description of all firmware features is found in Apple IIGS Firmware Reference.

\$12.00

Apple IIgs Technical Notes (APDA-42)

Apple Computer

Apple has turned the complete set of Apple II Technical Notes over to us for distribution. You can buy them all or you can get just the Apple IIGS Notes.

\$30.00

Classic Apple II Technical Notes (APDA-41)

Apple Computer

Apple has turned the complete set of Apple II Technical Notes over to us for distribution. You can buy them all or you can get just the Classic Apple Notes section.

\$20.00

Complete Set of Apple II Technical Notes (APDA-46)

Apple Computer

This is the complete set of Apple II Technical Notes and File Type Notes.

\$55.00

DOS 3.3 Programmer's Manual (APDA-23)

Apple Computer

Syndicomm is licensed to distribute photocopies of this out-of-print manual. This manual describes the DOS environment, text files, programming DOS commands in Applesoft, and more. The Apple II, II Plus, and IIe computers are covered.

\$20.00

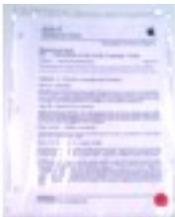

GS/OS Device Driver Reference (APDA-27)

Apple Computer

This reference describes the GS/OS application interface to device drivers, all device-specific calls and how to interact with the following GS/OS drivers: the SCSI driver, the AppleDisk 3.5 driver, the UniDisk 3.5 driver, the AppleDisk 5.25 driver, AppleTalk drivers, and GS/OS generated drivers. It also shows how to design and write drivers for hardware devices you can use with the Apple IIGS. This reference replaces the beta draft of GS/OS Reference, Volume 2. If you own that interim draft, you also should buy this reference to get the latest technical information.

\$22.00

HyperCard IIGS Technical Notes (APDA-45)

Apple Computer

Apple has turned the complete set of Apple II Technical Notes over to us for distribution. The three HyperCard IIGS Notes are available separately or with the complete set of notes.

\$3.00

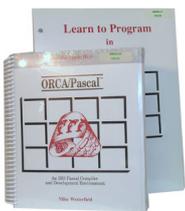

Learn to Program in C Bundle (BWBD-04)

The Byte Works

Get ORCA/C and Learn to Program in C for one low price!

\$70.00

Learn to Program in Pascal Bundle (BWBD-02)

The Byte Works

Get ORCA/Pascal and Learn to Program in Pascal at one low price!

\$70.00

Miscellaneous Technical Notes (APDA-43)

Apple Computer

Apple has turned the complete set of Apple II Technical Notes over to us for distribution. You can buy them all or you can get just the Miscellaneous Notes section.

\$10.00

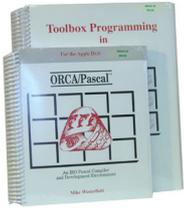

Toolbox Programming in C Bundle (BWBD-05)

The Byte Works

Get ORCA/C and Toolbox Programming in C for one low, low price!

\$85.00

Toolbox Programming in Pascal Bundle (BWBD-03)

The Byte Works

Get ORCA/Pascal and Toolbox Programming in Pascal for one low price!

\$85.00

Video Overlay Card Developers Kit (APDA-11)

Apple Computer

This kit provides basic design information about the Apple II Video Overlay Card as well as a disk containing sample programs, utilities, and header files.

\$19.00

Periodicals

---> Periodicals

Softdisk G-S (3.5" Disk) (SDGS-01)

Softdisk, LLC

Softdisk G-S magazine ran for several years, publishing a monthly disk filled with fascinating and useful articles and great software. For a complete list of the issues, read our complete list of issues online at <http://www.syndicomm.com/softdisk/g.html>.

\$5.00

Softdisk Magazine (5.25-inch disk) (SDII-99)

Softdisk, LLC

Softdisk magazine on 5.25-inch diskettes, for \$5 per issue. Be sure to specify the issue(s) you want when ordering.

\$5.00

Juiced.GS 2003 Back Issue Set (JGSB-03)

Syndicomm

Juiced.GS is the only remaining print publication for Apple II users. Our quarterly magazine is chock full of fantastic how-tos, reviews, and other must-read information for all Apple II users and enthusiasts.

\$18.00

Juiced.GS 2004 Subscription - International (JGSI-04)

Syndicomm

Juiced.GS is the only remaining print publication for Apple II users. Our quarterly magazine is chock full of fantastic how-tos, reviews, and other must-read information for all Apple II users and enthusiasts.

\$26.00

September-October 1993.

\$10.00

Friends II (MISC-06)

Syndicomm

The previous CD, released at KansasFest 2000, receives a one-year update and addendum in the form of this disc. Friends II compiles all the shareware and freeware files made available through Juiced.GS since the publication of the first FFL disc. Jones has also placed on this CD material that couldn't fit on the shareware floppies, such as Kim Howe's Shipwrecked!, a game written as a HyperCard stack; Bret Victor's Opening Line boot utility and Operation Lambda game; and much more. The Juiced.GS archive is also updated with JPEG image scans of every page of each issue of the quarterly newsletter, Volumes 5 and 6 (six issues total). The disc includes the Bernie emulator and several mountable images of the disc's main features.

\$15.00

Friends For Life (MISC-05)

Syndicomm

Friends for Life collects the Shareware Spotlight quarterly disks produced by Juiced.GS. Almost all software released from 1995 to mid-2000 is included on this CD. Also included on the CD are GIF images of each page of every Juiced.GS issue prior to the release of the CD.

\$30.00

Hardware

Mac DB-9 to DB-25 Modem Cable (CABL-09)

Computer Renaissance

This 6' male DB-9 to male DB-25 cable can be used to connect a Mac with a 9-pin serial port (such as the original Mac 128) to a standard external modem.

\$5.00

ADB Keyboard Cable (CABL-06)

Computer Renaissance

This 6' ADB cable will connect an ADB keyboard to an ADB-equipped Macintosh or Apple IIgs computer.

\$5.00

Mac-ImageWriter I (DB-9 to DB-25) Cable (CABL-05)

Computer Renaissance

This 6' DB-9 male to DB-25 male cable is designed to connect an older Macintosh to an ImageWriter I printer.

\$5.00

9-pin Mac to ImageWriter II Cable (CABL-02)

Computer Renaissance

This cable will connect a Mac with a 9-pin serial port, such as the original Mac 128, to an ImageWriter II printer. It has a male Mini-DIN 8 connector on one end and a male DB-9 port on the other end.

\$5.00

Apple II 25-pin to HP Printer 8-pin Cable (CABL-01)

Computer Renaissance

This cable can be used to connect a 25-pin Apple II serial port to an 8-pin Hewlett Packard printer port.

\$5.00

Mac/GS Data Transfer Switch (CABL-10)

Belkin

This 2-way serial switch box allows two Apple IIgs or Macintosh computers with 8-pin serial ports share one serial device, or two serial devices be shared on one 8-pin serial port. Has a shielded metal case, durable rotary switch, and does not need external power. Comes with a lifetime warranty. Includes one 6' 8-pin pass-through serial cable.

\$10.00

ComputerEyes GS (MISC-07)

Digital Vision

Syndicomm is selling new in box, still shrinkwrapped, Digital Vision ComputerEyes GS cards, complete with manual and software. With this card, and the software that comes with it, you can plug a VCR, DVD player, laserdisc player, or other NTSC video source into your Apple IIGS and grab still images from the video feed, then manipulate the images and save them to disk in a variety of formats including super high resolution and Print Shop graphics.

~~\$15.00~~ \$5.00

Software

Software ---> Compilations

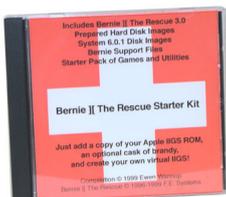

Softdisk Overdose (SYND-17)

Softdisk, LLC

Softdisk Overdose bundles together Softdisk Supreme, containing the complete collection of all 166 issues of Softdisk magazine with Simply Softdisk G-S, which contains the complete set of Softdisk G-S magazines. Each of these packages sells separately for \$50.

\$100.00

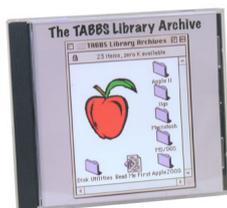

Bernie][The Rescue Starter Kit (EWEN-02)

Ewen Wannop

Bernie][The Rescue is a software-based emulator that will allow you to run Apple II and IIGS software on your Power Macintosh. The Bernie][The Rescue Starter Kit CD-ROM has been set up and designed to make it as easy as possible for people to set up and run Bernie. The Starter Kit CD-ROM includes the very latest version of Bernie and all of Bernie's documentation and support files. The CD-ROM includes the latest 3.0 preview version of Bernie, as well as several previous versions that run on a wide array of Power Macintosh computers.

\$20.00

The TABBS CD-ROM (EWEN-01)

Ewen Wannop

For almost 18 years, Ewen Wannop (the author of the popular Spectrum telecommunications software for the Apple IIGS) operated TABBS -- The Apple BBS -- a Bulletin Board System located in the United Kingdom. During that time, Ewen was also involved with several Apple II user groups, and TABBS was operated to benefit members of the two largest Apple II user groups in the United Kingdom -- the Apple 2000 User Group and the British Apple IIGS Club.

\$20.00

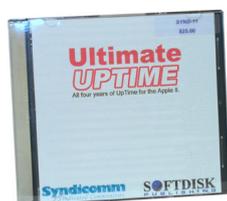

Totally SheppyWare (Upgrade) (SYND-15)

Syndicomm

This product is for current owners of the Totally SheppyWare/Complete Guide to SheppyWare package only. You must have purchased the product directly from Eric Shepherd or from Syndicomm to qualify for this upgrade price.

\$15.00

Ultimate UpTime (SYND-11)

Softdisk, LLC

Ultimate UpTime is a complete compilation of all four years of UpTime magazine on one CD-ROM. UpTime was a disk-based magazine that delivered a two-sided 5.25-inch disk each month. The CD-ROM includes all of the issues in DSK and ShrinkIt disk archive formats. The insert in the CD case includes a list of all the programs on each issue.

\$25.00

DV-ROMulan A2 (MISC-10)

Apple2.org

This DVD video disc contains all kinds of fascinating Apple II video footage, including footage from Quality Computers' Apple II Review from 1993, Apple commercials and demo videos, speeches by Apple executives, and more. A must-have addition to the collection of any Apple history buff!

\$30.00

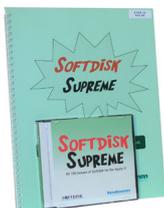

A2-ROMulan Volume 1 (MISC-11)

Apple2.org

A2-ROMulan is a CD-ROM compilation of a wide and at times esoteric collection of Apple II and Apple IIgs software. Included is source code for products such as DigitalSession, the never-quite-finished sound recording and editing utility developed by ECON Technologies to go with the SoundMeister card. There's lots of unusual stuff on this CD, and it's a great addition to any collection.

\$30.00

Softdisk Supreme (SYND-12)

Syndicomm

All 166 issues (plus the elusive prototype issue #0) of the 8-bit version of Softdisk magazine, all on one CD-ROM. Each issue's two or four 140K disk sides are on the CD-ROM in DSK and ShrinkIt disk archive format. Also included on the CD-ROM are ASCII text and PDF indices of the programs on each issue's disks. And to top it all off, we include a printed book listing each issue's programs.

\$50.00

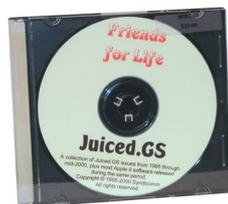

Friends II (MISC-06)

Syndicomm

The previous CD, released at KansasFest 2000, receives a one-year update and addendum in the form of this disc. Friends II compiles all the shareware and freeware files made available through Juiced.GS since the publication of the first FFL disc. Jones has also placed on this CD material that couldn't fit on the shareware floppies, such as Kim Howe's Shipwrecked!, a game written as a HyperCard stack; Bret Victor's Opening Line boot utility and Operation Lambda game; and much more. The Juiced.GS archive is also updated with JPEG image scans of every page of each issue of the quarterly newsletter, Volumes 5 and 6 (six issues total). The disc includes the Bernie emulator and several mountable images of the disc's main features.

\$15.00

Friends For Life (MISC-05)

Syndicomm

Friends for Life collects the Shareware Spotlight quarterly disks produced by Juiced.GS. Almost all software released from 1995 to mid-2000 is included on this CD. Also included on the CD are GIF images of each page of every Juiced.GS issue prior to the release of the CD.

\$30.00

Time In A Bottle (SYND-10)

Syndicomm

Time In A Bottle is a two-disc CD-ROM compilation containing the entire contents of the file library from the immensely popular but now-defunct GENie Apple II RoundTable. This compilation of over a gigabyte of Apple II software, graphics, sounds, and more is a veritable treasure-trove of information and timeless Apple II shareware, public domain, and freeware software.

\$50.00

Simply Softdisk G-S (SYND-09)

Softdisk, LLC

Simply Softdisk G-S is a complete collection of all 82 issues of Softdisk G-S, the popular disk-based magazine for Apple IIs users. With articles and original software on every disk, the Softdisk G-S library is a must-have addition to any Apple IIs user's library.

\$50.00

Opus II: The Software (OPUS-01)

The Byte Works

Here's the complete collection of Byte Works software! You get all of the ORCA products, both 8 bit and 16 bit. You get all of the Quick Click products. You get our educational programs, our learn to program courses, our toolbox programming courses... everything!

\$95.00

Opus II: The Source (OPUS-02)

The Byte Works

Here's the source code for all of the programs on Opus II The Software that were developed at the Byte Works! Whether you've always wanted to tinker with our programs, need to learn how programs like ours are written, or are just plain curious, this is certainly the largest, most comprehensive set of commercial source code ever seen for the Apple IIGS. It's a must-have for any programmer!

\$150.00

Totally SheppyWare (SYND-01)

Syndicomm

The Totally SheppyWare/Complete Guide to SheppyWare bundle provides all of Eric "Sheppy" Shepherd's software for Apple II, Macintosh, and BeOS systems, all on one CD-ROM. Also included is a printed book, spiral bound, documenting all 50+ products included on the CD!

\$50.00

Opus II: The Works (OPUS-03)

The Byte Works

Opus II: The Works, which consists of both the Opus II: The Software CD and the Opus II: The Source CD, is the ultimate Byte Works product. Get every single Byte Works product ever released for the Apple II (as well as one or two that were never released), as well as the source code for them all!

\$195.00

ORCA/C Compiler 2.1 Upgrade (BWGS-28)

The Byte Works

This product is for current owners of ORCA/C 1.x only, and includes new disks as well as a replacement for your original manual.

\$30.00

ORCA/M Assembler 2.0 Upgrade (BWGS-29)

The Byte Works

This item may only be purchased if you are a current owner of ORCA/M 1.x, and includes replacement disks and a new manual.

\$25.00

Marinetti 3.0b1: TCP/IP Developers' Kit (MISC-09)

Richard Bennett

Marinetti is a tool that supplies TCP/IP for the Apple IIGS. Like all tools, Marinetti doesn't do anything on its own. Instead, Marinetti is typically used by application programs like web browsers that need to communicate using the Internet. This documentation is modeled after Apple's toolbox documentation, and serves the same purpose for Marinetti that the Apple IIGS Toolbox Reference serves for Apple's tools. The disk includes the executable files for Marinetti, as well as interface files for ORCA/M, ORCA/C, ORCA/Pascal, GSoft BASIC and Merlin.

\$25.00

APW and MPW Interfaces for 6.0.1 (APDA-37)

Apple Computer

Interface files for the APW and MPW languages from Apple, including MPW IIGs C, APW C, MPW IIGs Assembler, APW Assembler, and MPW IIGs Pascal, for System 6.0.1.

\$20.00

Complete C Bundle (BWBD-07)

The Byte Works

Get ORCA/C, Learn to Program in C, and the Toolbox Programming in C package all for one incredibly low price!

\$105.00

Complete Pascal Bundle (BWBD-06)

The Byte Works

Get ORCA/Pascal, Learn to Program in Pascal, and Toolbox Programming in Pascal all for one incredible price!

\$105.00

GSoft BASIC (BWGS-25)

The Byte Works

GSoft BASIC is a powerful interpreted BASIC for the Apple IIgs with complete support for developing Toolbox programs! With powerful features including WHILE/WEND loops and super high resolution graphics support, as well as support for records and structures, GSoft BASIC is the logical next step in the evolution of BASIC programming on the Apple IIgs.

\$40.00

Merlin To ORCA (BWGS-14)

The Byte Works

This utility converts Merlin assembly language source code into ORCA/M format. This is a great tool if you're switching from the Merlin assembler to the ORCA/M assembler, or if a Merlin user sends you their code and you need to import it into ORCA/M.

\$10.00

Opus II: The Software (OPUS-01)

The Byte Works

Here's the complete collection of Byte Works software! You get all of the ORCA products, both 8 bit and 16 bit. You get all of the Quick Click products. You get our educational programs, our learn to program courses, our toolbox programming courses... everything!

\$95.00

Opus II: The Source (OPUS-02)

The Byte Works

Here's the source code for all of the programs on Opus II The Software that were developed at the Byte Works! Whether you've always wanted to tinker with our programs, need to learn how programs like ours are written, or are just plain curious, this is certainly the largest, most comprehensive set of commercial source code ever seen for the Apple IIGS. It's a must-have for any programmer!

\$150.00

ORCA/Integer BASIC (BWGS-08)

The Byte Works

The ORCA/Integer BASIC compiler implements the classic version of BASIC from the olden days of the Apple II. But on top of that, the complete source code is included, along with a manual that explains how it all works! This is a great introduction to designing compilers for the Apple IIgs computer.

\$25.00

ORCA/M Assembler (BWGS-04)

The Byte Works

ORCA/M is a complete development environment for assembly language programming on the Apple IIGS. It includes an assembler with the most powerful macro language ever implemented on an Apple II computer, a link editor, a scriptable command processor, several utilities, and a full screen text editor. You also get Apple's GSBug debugger, Rez compiler, and many programmer utilities - a \$30 value - absolutely free!

\$40.00

ORCA/Pascal (BWGS-05)

The Byte Works

ORCA/Pascal is a complete Pascal language development system for the Apple IIGS computer. You get all the software you need to write top quality programs in Pascal. ORCA/Pascal includes an ISO compliant Pascal compiler with many extensions, including Apple's Object Pascal language extensions. You also get a linker, libraries, samples, and both a desktop development environment and a UNIX-like text development environment. You even get Rez, Apple's resource compiler, absolutely free!

\$50.00

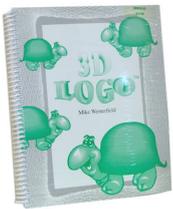

Utility Pack #1 (BWGS-15)

The Byte Works

An assortment of handy ORCA shell utility programs for the Apple IIGS.

\$10.00

3D Logo (BWGS-02)

The Byte Works

3D Logo is an Apple IIGS Logo programming environment with a twist... you can draw in 3D, and with the included 3D glasses, the shapes you draw look like they're hovering in mid-air! Logo is a classic language that's easy to learn, even for young children, and the simple turtle graphics (where the child gives a turtle commands to move around and draw) make it fun to use.

\$35.00

3D Logo and HyperLogo (BWBD-01)

The Byte Works

Get both 3D Logo and HyperLogo for one low price!

\$55.00

Apple II High-Speed SCSI Card Utilities (APDA-21)

Apple Computer

These utilities let users perform backups, format, and partition their SCSI devices, and allow developers to develop applications that make use of the various SCSI drivers Apple Computer provides (hard disk, CD-ROM, scanner, tape backup). This package is for developers who want to license the SCSI software and for those who want to develop applications that use the High-Speed SCSI card or the SCSI drivers. Additionally, it is provided for APDA customers who own the previous SCSI card and want to use this new software.

\$19.00

Apple IIGS Source Code Sampler (APDA-20)

Apple Computer

The Apple IIGS Source Code Sampler includes three disks full of sample programs for the Apple IIGS, written by Apple's own Developer Technical Support department.

\$10.00

GSBug and Debugging Tools (APDA-15)

Apple Computer

This is a beta version of Apple Computer's machine-language debugger. It works on any Apple IIGS with System Software 4.0 or later. Use GSBug to step through your code, save a trace history to a file on disk, define breakpoint and insert them into your code, define and use memory protection windows, and view the debugger's master display. Other debugging utilities are also included, along with a printed manual.

\$30.00

HyperCard IIGS Developer's Kit (APDA-34)

Apple Computer

New from Apple, the HyperCard IIGS Developer's Kit consists of two 800K disks. You get the complete developer documentation for HyperCard 1.1, including the hooks to X commands and functions and notes on the Media Control Stack, in both ASCII and Word 4.0 formats. You also get APW and MPW interfaces, RMOVER 1.1d1 for moving resources, and source code samples for eight XCMDs.

\$10.00

HyperLogo (BWGS-03)

The Byte Works

HyperLogo is a 3D-capable implementation of the Logo programming language, designed to work within the HyperStudio multimedia environment. Logo is a wonderful programming language that can be easily learned by even very young children, who love the fun and easy-to-use turtle graphics environment. Give them an hour with HyperLogo and the included 3D glasses, and watch your child have fun!

\$35.00

HyperMover (APDA-30)

Apple Computer

HyperMover is what you need to move HyperCard stacks between the IIGS and the Macintosh or back. The package includes one GS/OS and one Mac disk. HyperMover requires HyperCard IIGS and HyperCard for Macintosh. It does not translate X commands, but all other parts of your stacks will be transferred from one machine to the other.

\$10.00

Learn to Program in C Bundle (BWBD-04)

The Byte Works

Get ORCA/C and Learn to Program in C for one low price!

\$70.00

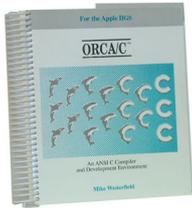

Learn to Program in Pascal Bundle (BWBD-02)

The Byte Works

Get ORCA/Pascal and Learn to Program in Pascal at one low price!

\$70.00

ORCA/C Compiler (BWGS-06)

The Byte Works

ORCA/C is a complete C language development system for the Apple IIGS computer. You get all the software you need to write top quality programs in C. ORCA/C includes an ANSI compliant C compiler, most ANSI C libraries and several UNIX and Apple-specific libraries. You also get a linker, samples, and both a desktop development environment and a UNIX-like text development environment. You even get Rez, Apple's resource compiler, absolutely free!

\$50.00

ORCA/Debugger (BWGS-07)

The Byte Works

It's happened to all of us. Your program crashes, hangs, or just doesn't quite do what you expected. You know it's a problem, but what is the problem? That's what a debugger is for. It helps you find out what the problem is by letting you watch your program execute. ORCA/Debugger is the most advanced debugger ever for Apple IIGS C, Pascal, Modula-2, Integer BASIC and GSoft BASIC, with a list of valuable features that let you find bugs quickly. There's even a few that let you bypass bugs while the program runs, so you can step a little further to look for other bugs!

\$25.00

ORCA/Sublib Source (BWGS-13)

The Byte Works

ORCA/M, ORCA/Pascal and ORCA/C all contain libraries of subroutines that do various things for you. For example, ORCA/M's MUL2 macro calls a subroutine to multiply two integer numbers, ORCA/Pascal's NEW command calls a memory management module, and ORCA/C's printf() command calls a subroutine to print formatted text. ORCA/Sublib source contains the complete source code for all of the libraries in all three languages.

\$15.00

System 6 Release Notes (APDA-31)

Apple Computer

This single 3.5" disk describes changes made from previous systems for System 6, but does not include programming or user documentation.

\$4.00

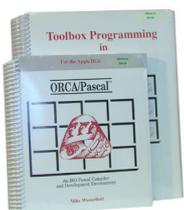

Toolbox Programming in C Bundle (BWBD-05)

The Byte Works

Get ORCA/C and Toolbox Programming in C for one low, low price!

\$85.00

Toolbox Programming in Pascal Bundle (BWBD-03)

The Byte Works

Get ORCA/Pascal and Toolbox Programming in Pascal for one low price!

\$85.00

Opus][: The Works (OPUS-03)

The Byte Works

Opus][: The Works, which consists of both the Opus][: The Software CD and the Opus][: The Source CD, is the ultimate Byte Works product. Get every single Byte Works product ever released for the Apple II (as well as one or two that were never released), as well as the source code for them all!

\$195.00

Byte Paint (BWII-02)

The Byte Works

Byte Paint is a package of ampersand (&) commands for Applesoft BASIC programmers to use to create double-hires graphics. Also included is a simple paint program, written in Applesoft BASIC using those ampersand commands.

\$10.00

Opus II: The Software (OPUS-01)

The Byte Works

Here's the complete collection of Byte Works software! You get all of the ORCA products, both 8 bit and 16 bit. You get all of the Quick Click products. You get our educational programs, our learn to program courses, our toolbox programming courses... everything!

\$95.00

Apple Filecard Toolkit (APDA-01)

Apple Computer

This prototype software from Apple, which was never declared final, contains a variety of user interface utilities for the Apple II software developer. These utilities provide the programmer the ability to create powerful text screen based user interfaces.

\$19.00

Apple II Pascal Desktop Toolkit (APDA-03)

Apple Computer

This is a library of routines that support MouseText and/or double high resolution graphics for the Apple II family of computers. The library provides management of a desktop environment, complete with pull-down menus, windows, cursors, and event handling. The MouseText Toolkit manual and disks manage these activities in text mode while the MouseGraphics Toolkit manual and disk provide equivalent functions in graphics mode.

\$25.00

Apple II ProDOS Desktop Toolkit (APDA-25)

Apple Computer

This is a library of routines that support MouseText and/or double Hi-Res graphics for the Apple II family of computers. The library also manages the desktop environment, including pull-down menus, window, cursors, and event handling. The MouseText Toolkit manual and disks manage these activities in text mode, and the Mouse Graphics Toolkit manual and disks provide equivalent functions in graphics mode.

\$25.00

Apple II SuperPILOT (APDA-04)

Apple Computer

This package includes the fully-documented SuperPILOT system for experimenting with and designing programs in the easy-to-use PILOT programming language, Apple II SuperPilot Special Edition 1.0, and the Special Edition document which describes the difference between this edition and SuperPILOT.

\$59.00

Apple Pascal 1.3 (APDA-24)

Apple Computer

This is Apple Computer's implementation of the University of California San Diego (UCSD) p-system for the Apple II family of computers. Develop software in Pascal that will run on any Apple II.

\$55.00

MON+ Debugger (BWII-04)

The Byte Works

MON+ supports forty commands for debugging assembly language programs. You can trace programs step by step, or let particular subroutines run at full speed. A disassembler lets you examine the program as you debug it. MON+ also lets you assign names to locations, so that you can use the same symbolic names when debugging a program that were used when the program was written. When an error is found, you can often fix it from MON+ using either hexadecimal numbers, as with the Apple monitor, or with a powerful built in miniassembler. If you never make a mistake, you really don't need this program. The rest of us shouldn't be without it!

\$20.00

ORCA/M Floating Point Libraries (BWII-06)

The Byte Works

This package gives you macro and subroutine library support for IEEE format single and double precision numbers. Operations include add, subtract, multiply, divide, sine, cosine, arc tangent, natural log and exponent, formatted input and output, square root, absolute value, sign function, and conversions between floating point and integer numbers. Source code is included.

\$20.00

ORCA/M Macro Assembler 4.1 (BWII-03)

The Byte Works

This package is a complete assembly language development system for 8 bit Apple II computers complete with assembler, linker, editor, and a Unix-like operating environment.

\$35.00

ORCA/M O/S Source (BWII-05)

The Byte Works

This package consists of four disks packed with source code for key parts of the ORCA/M system. Included is the source code for the operating system (ORCA.SYSTEM and ORCA.HOST), the subroutine libraries, and the XREF utility. With the operating system source code, you can add drivers for hardware that is not currently supported by ORCA, and cause ORCA to automatically load the drivers. It is also possible to configure clock cards for slots other than slot 2. The subroutine library source code lets you customize the library junctions, as well as explore them for a more complete understanding of the system. The XREF utility gives you an example of a utility written specifically to run under ORCA/M. It demonstrates the concepts needed to stop and ask for a disk that is not on line, and to read and parse the command line.

\$20.00

The MPW IIGS Collection (SYND-02)

Syndicomm

The MPW IIGS Collection is a complete set of all the Apple IIGS compilers and tools that operate within the Macintosh Programmer's Workshop (MPW) environment. With these tools, and a copy of Apple's free MPW package, you can write Apple IIGS software using your Macintosh computer. All on one CD-ROM.

\$90.00

MPW IIGS ORCA/C (BWGS-24)

The Byte Works

For years, ORCA/C has been the leader in C compilers for native development on the Apple IIGS. Now it's also the standard for cross development from the Macintosh! MPW IIGS ORCA/C is a port of ORCA/C 2.0.3 to Apple's MPW environment on the Macintosh computer. You compile from the Macintosh, then run the programs from System 6.0.1 on an Apple IIGS or Apple IIGS emulator on your Macintosh. Take advantage of your Macintosh computer's blazing speed and large screen to ease Apple IIGS software development!

\$60.00

Opus II: The Software (OPUS-01)

The Byte Works

Here's the complete collection of Byte Works software! You get all of the ORCA products, both 8 bit and 16 bit. You get all of the Quick Click products. You get our educational programs, our learn to program courses, our toolbox programming courses... everything!

\$95.00

HyperMover (APDA-30)

Apple Computer

HyperMover is what you need to move HyperCard stacks between the IIGS and the Macintosh or back. The package Includes one GS/OS and one Mac disk. HyperMover requires HyperCard IIGS and HyperCard for Macintosh. It does not translate X commands, but all other parts of your stacks will be transferred from one machine to the other.

\$10.00

MPW IIGS Assembler (APDA-16)

Apple Computer

This is the current release of the Macintosh-to-Apple IIGS Cross-Development Suite Assembler, the full-featured macro assembler that runs in the MPW environment. It generates code for five processors: 65816, 6502, 65C02, NCRXC021 and Mitsubishi 740 microcontroller. Object modules created with this assembler can be linked with MPW IIGS ORCA/C, MPW IIGS C, or MPW IIGS Pascal object modules.

\$50.00

MPW IIGS C (APDA-17)

Apple Computer

MPW IIGS C v 1.0.2 contains the Cross-Development Suite C compiler for the Apple IIGS and offers full Kernighan and Richie implementation of the C language. It runs under MPW on a Macintosh computer. Note: If you want ANSI C compatibility, get MPW IIGS ORCA/C instead!

\$60.00

MPW IIGS Pascal (APDA-18)

Apple Computer

This is the beta version of the Pascal compiler for the MPW-Apple IIGS Cross-Development Suite. It runs under MPW on a Macintosh computer. The compiler creates code that executes directly on an Apple IIGS computer. It is based on and uses syntax almost identical with that of MPW Pascal 3.0. Unlike MPW Pascal, however, object-oriented programming is not supported. This is the same version of Pascal used to create Apple's HyperCard IIGS software.

\$60.00

MPW IIGS Tools 1.3 (APDA-19)

Apple Computer

You can create Apple IIGS versions of your Macintosh products with MPW IIGS. The cornerstone of the MPW IIGS Cross-Development Suite is MPW IIGS Tools. If you're familiar with MPW, you'll feel right at home with MPW IIGS because the tools are modeled after their MPW counterparts. This product contains the MPW IIGS Tools that are essential to accessing the new features of Apple IIGS System Disk 5.0.4 and revisions to several existing MPW IIGS tools.

\$45.00

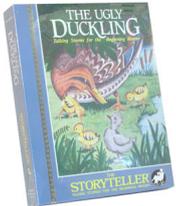

Voyager I (BWII-07)

The Byte Works

A complete tour of the solar system on your 8-bit Apple II computer. Includes a handy printed booklet about the software as well as a single 5.25-inch disk.

\$10.00

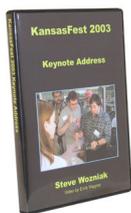

Ugly Duckling Talking Storybook (BWGS-01)

The Byte Works

The Ugly Duckling Talking Storybook tells the tale of the Ugly Duckling. With graphics and a talking narrator, this is a fun way for your child to learn to read on your Apple IIs!

\$15.00

KansasFest 2003 Keynote DVD (SYND-16)

Syndicomm

The keynote address at KansasFest 2003 was a special event, with Apple II inventor and Apple Computer, Inc. cofounder Steve Wozniak giving a fascinating and humorous two-hour address that delighted the audience. Syndicomm is pleased to present the entire address, including the question and answer session following it, on DVD, complete with chapter selection so you can quickly find your favorite anecdote.

\$10.00

Esprit de Apple Corps (GBIT-01)

Gamebits

Esprit de Apple Corps is a two-disc set of multimedia files specifically for the Apple II. Over 4,500 MOD song files, 10,000 graphic files, games, sounds, and more are included in this archive. The collection was originally compiled by Russell Nielson and made available on 24 Zip disks, each one retailing at \$15. The entire collection, originally a \$360 value, is now on CD-ROM for only \$25, which includes shipping - "well worth the meager investment," wrote Juiced.GS.

\$25.00

KFest 2001 Multimedia CD-ROM Pack (SYND-08)

Syndicomm

This two CD-ROM set is chock full of photos and QuickTime movies from the 2001 KansasFest Apple II event. Includes video of all the sessions and presentations, the celebrity roast of Max Jones, and more.

\$20.00

DOS 3.3 System Master (APDA-22d)

Apple Computer

This 5.25-inch diskette is the Apple II DOS 3.3 System Master. No documentation is included; if you want the DOS User's Manual as well, please order item number APDA-22.

\$2.00

Apple II AppleShare Setup (APDA-35)

Apple Computer

This disk provides everything you need to configure your Apple II to boot over an AppleTalk network.

\$15.00

Apple II High-Speed SCSI Card Utilities (APDA-21)

Apple Computer

These utilities let users perform backups, format, and partition their SCSI devices, and allow developers to develop applications that make use of the various SCSI drivers Apple Computer provides (hard disk, CD-ROM, scanner, tape backup). This package is for developers who want to license the SCSI software and for those who want to develop applications that use the High-Speed SCSI card or the SCSI drivers. Additionally, it is provided for APDA customers who own the previous SCSI card and want to use this new software.

\$19.00

Apple IIGS System 5.0.4 (APDA-33)

Apple Computer

This is an older and smaller version of the 16 bit operating system for the Apple IIGS. See APDA-47 for the latest version; we recommend version 5.0.4 only if your Apple IIGS has less than 2 MB of memory or has no hard disk drive. These two disks contain all of the software you need to actually run your Apple IIGS. The documentation is technical documentation, describing in detail the changes, bug fixes and additions made to System 5.0.4 compared to System 5.0.2.

\$8.00

Apple IIGS System 5.0.4 (disks only) (APDA-33d)

Apple Computer

This is an older and smaller version of the 16 bit operating system for the Apple IIGS. See APDA-47 for the latest version; we recommend version 5.0.4 only if your Apple IIGS has less than 2 MB of memory or has no hard disk drive. These two disks contain all of the software you need to actually run your Apple IIGS. The documentation is technical documentation, describing in detail the changes, bug fixes and additions made to System 5.0.4 compared to System 5.0.2.

\$4.00

Apple IIgs System 6.0.1 (APDA-47)

Apple Computer

This is the latest 16 bit operating system for Apple IIGS computers, on six disks that contain all of the software you need to actually run your Apple IIGS. The documentation is technical documentation, describing in detail the changes, bug fixes and additions made to System 6.0.1 compared to it's predecessor, System 6.0.

\$15.00

Apple IIgs System 6.0.1 (disks only) (APDA-47d)

Apple Computer

This is the latest 16 bit operating system for Apple IIGS computers, on six disks that contain all of the software you need to actually run your Apple IIGS. There is no documentation included.

\$12.00

DOS 3.3 with User's Manual (APDA-22)

Apple Computer

This manual and disk are designed to get you started using the DOS 3.3 operating system, which works on all Apple II computers with 16-sector Disk II drives (in other words, pretty much all of them). The manual is an authorized reproduction of Apple's DOS 3.3 User Manual.

\$20.00

ProDOS 8 System Disks (APDA-02)

Apple Computer

Apple II ProDOS 8 for 8-bit Apple II computers. This package includes the latest versions of ProDOS for all 8-bit Apple II computers on both 3.5" and 5.25" disks.

\$14.00

OK-Writer (CD-ROM) (SYND-19)

Syndicomm

OK-Writer is a word processor for children designed from the ground up for Mac OS X 10.3 or later. With easy-to-use buttons and fun sound effects, as well as the ability to read stories aloud, OK-Writer will draw children into the wonderful world of creative writing. Then, as your child grows, OK-Writer grows with them. They can learn to use more powerful features such as spell checking and find and replace.

\$10.00

Spectrum 2.5.3 Upgrade Diskette (EWEN-06)

Ewen Wannop

This diskette will upgrade your copy of Spectrum 2.2 or later to version 2.5.3. If you don't already own Spectrum, you want EWEN-03.

\$5.00

Spectrum Deluxe CD-ROM (EWEN-04)

Ewen Wannop

Written by British author Ewen Wannop, Spectrum is an easy-to-use yet powerful and comprehensive IIGS desktop telecommunications program that permits users to dial up a local BBS, to log onto an employer's remote computer, or to access the far reaches of cyberspace via a local Internet Service Provider.

\$30.00

Spectrum Automated Mailer (EWEN-05)

Ewen Wannop

Spectrum Automated Mailer, known affectionately as SAM, is a sophisticated and comprehensive suite of scripts for Spectrum v2.3 that provides an elegant but easy way for Internet-connected IIGS users to send outgoing e-mail to an SMTP mail server and to receive incoming e-mail from multiple POP3 servers.

\$10.00

Spectrum (Four Diskettes) (EWEN-03)

Ewen Wannop

Written by British author Ewen Wannop, Spectrum is an easy-to-use yet powerful and comprehensive IIGS desktop telecommunications program that permits users to dial up a local BBS, to log onto an employer's remote computer, or to access the far reaches of cyberspace via a local Internet Service Provider.

\$30.00

Spectrum Internet Suite (MISC-08)

Geoff Weiss

Spectrum Internet Suite (SIS) provides a point-and-shoot web browser to Apple IIGS users. While it doesn't integrate graphics support, or support JavaScript, it does do a nice job of rendering web pages on the IIGS screen. Use your mouse to navigate the web at last! With support for bookmarks, sending email, and much more, SIS brings the Apple II into the Internet age! Requires the Spectrum telecommunications program by Ewen Wannop.

\$15.00

EGOed (RSSF-01)

Ross Falconer

EGOed 2.0 is a top-notch word processing New Desk Accessory (NDA) for the Apple IIgs. With EGOed, you can pop up windows to edit a wide assortment of document formats right within any Apple IIgs desktop application. Edit AppleWorks, AppleWorks GS, text, RTF, and other text document formats quickly and easily, with a wide array of handy editing tools.

\$10.00

Byte Paint (BWII-02)

The Byte Works

Byte Paint is a package of ampersand (&) commands for Applesoft BASIC programmers to use to create double-hires graphics. Also included is a simple paint program, written in Applesoft BASIC using those ampersand commands.

\$10.00

GraphicWriter III Translators (EGOS-02)

EGO Systems, Inc.

This set of translator plugins for the popular GraphicWriter III desktop publishing software from Seven Hills Software adds support for importing AppleWorks GS and RTF word processor documents into your GraphicWriter III page layout document.

\$10.00

HyperCard IIgs (APDA-52)

Apple Computer

This is the complete HyperCard IIgs package, with disks and manuals. There are six 3.5" disks and three books punched for three-ring binders (binders not included).

\$58.00

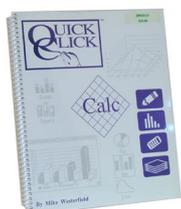

HyperCard IIgs (Disks Only) (APDA-51)

Apple Computer

HyperCard IIgs is the Apple IIgs version of the world-famous hypermedia development system. With HyperCard IIgs, you can create anything from simple point-and-click presentations to complex applications, with an easy-to-learn environment and scripting language. If you only want the HyperCard IIgs disks, this is the product for you.

\$12.00

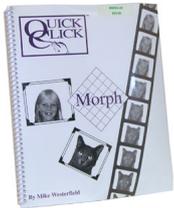

Quick Click Calc (BWGS-21)

The Byte Works

Quick Click Calc is a powerful spreadsheet for the Apple IIGS computer. With complete support for complex mathematical expressions, graphing and charting, fonts, styles, and colors assigned to cells, and much more. It's the most powerful spreadsheet available for the Apple IIGS!

\$35.00

Quick Click Morph (BWGS-22)

The Byte Works

Quick Click Morph is a fun and useful package that lets you create animations of one image morphing into another, right on your Apple IIgs computer!

\$35.00

HyperMover (APDA-30)

Apple Computer

HyperMover is what you need to move HyperCard stacks between the IIGS and the Macintosh or back. The package Includes one GS/OS and one Mac disk. HyperMover requires HyperCard IIGS and HyperCard for Macintosh. It does not translate X commands, but all other parts of your stacks will be transferred from one machine to the other.

\$10.00

PMPFax (PMPR-01)

Parkhurst Micro Products

PMPFax is the fax solution for the Apple IIgs computer. With complete support for both sending and receiving faxes, PMPFax can turn your Apple IIgs into a complete faxing center! You can send faxes by simply printing from any standard desktop application, such as AppleWorks GS, or send a quick fax using the FaxCenter program.

\$35.00

ANSITerm (PMPR-02)

Parkhurst Micro Products

ANSITerm telecommunications software for the Apple IIgs computer provides the most complete ANSI emulation support of any Apple II communications program. With a powerful macro language and complete protocol file transfer support, ANSITerm is a great addition to your telecommunications arsenal!

\$40.00

Softdisk Overdose (SYND-17)

Softdisk, LLC

Softdisk Overdose bundles together Softdisk Supreme, containing the complete collection of all 166 issues of Softdisk magazine with Simply Softdisk G-S, which contains the complete set of Softdisk G-S magazines. Each of these packages sells separately for \$50.

\$100.00

Softdisk Supreme (SYND-12)

Syndicomm

All 166 issues (plus the elusive prototype issue #0) of the 8-bit version of Softdisk magazine, all on one CD-ROM. Each issue's two or four 140K disk sides are on the CD-ROM in DSK and ShrinkIt disk archive format. Also included on the CD-ROM are ASCII text and PDF indices of the programs on each issue's disks. And to top it all off, we include a printed book listing each issue's programs.

\$50.00

Software ---> Softdisk G-S

Softdisk Overdose (SYND-17)

Softdisk, LLC

Softdisk Overdose bundles together Softdisk Supreme, containing the complete collection of all 166 issues of Softdisk magazine with Simply Softdisk G-S, which contains the complete set of Softdisk G-S magazines. Each of these packages sells separately for \$50.

\$100.00

Simply Softdisk G-S (SYND-09)

Softdisk, LLC

Simply Softdisk G-S is a complete collection of all 82 issues of Softdisk G-S, the popular disk-based magazine for Apple IIgs users. With articles and original software on every disk, the Softdisk G-S library is a must-have addition to any Apple IIgs user's library.

\$50.00

Marinetti 3.0b1 TCP/IP Stack (MISC-17)

Richard Bennett

This single 3.5-inch floppy disk contains the installer for Marinetti 3.0b1, the most recent public beta release of the TCP/IP stack for the Apple IIcs. With Marinetti installed, and a modem, LANceGS ethernet card, or access to a MacIP interface, your Apple IIcs can connect to the Internet using a wide variety of programs available elsewhere.

\$4.00

Apple IIc Telecomm Starter Kit (5.25) (MISC-16)

Syndicomm

The Apple IIc Telecomm Starter Kit includes Modem.Mgr telecommunications software preconfigured for an Apple IIc or IIc Plus computer as well as the ShrinkIt utility needed to handle most compressed files you might download while online. This is a must-have first step for new Apple IIc owners that have a modem and want to go online.

\$2.00

Apple IIc Telecomm Starter Kit (3.5) (MISC-15)

Syndicomm

The Apple IIc Telecomm Starter Kit includes Modem.Mgr telecommunications software preconfigured for an Apple IIc or IIc Plus computer as well as the ShrinkIt utility needed to handle most compressed files you might download while online. This is a must-have first step for new Apple IIc owners that have a modem and want to go online.

\$2.00

Apple IIe Telecomm Starter Kit (5.25) (MISC-14)

Syndicomm

The Apple IIe Telecomm Starter Kit includes Modem.Mgr telecommunications software preconfigured for an Apple IIe computer as well as the ShrinkIt utility needed to handle most compressed files you might download while online. This is a must-have first step for new Apple IIe owners that have a modem and want to go online.

\$2.00

Apple IIe Telecomm Starter Kit (3.5) (MISC-13)

Syndicomm

The Apple IIe Telecomm Starter Kit includes Modem.Mgr telecommunications software preconfigured for an Apple IIe computer as well as the ShrinkIt utility needed to handle most compressed files you might download while online. This is a must-have first step for new Apple IIe owners that have a modem and want to go online.

\$2.00

Apple IIgs Telecom Starter Kit (MISC-12)

Syndicomm

The Apple IIgs Telecom Starter Kit contains Modem.Mgr telecommunications software, preconfigured for Apple IIgs computers, as well as the GS-ShrinkIt file compression and expansion utility and other important software you'll need when you go online with the Apple IIgs computer.

\$2.00

ImageMaker (Diskette) (SYND-14)

Syndicomm

ImageMaker is an easy-to-use Apple IIgs utility that lets you turn any GS/OS accessible disk into a disk image in DiskCopy 4.2, DiskCopy 6, raw, or Universal Disk Image (2mg) format. Includes support for batch imaging of floppies; just start the operation and insert a new disk every time the previous one is ejected!

\$5.00

GS ROM Grabber (Diskette) (SYND-07)

Syndicomm

An easy-to-use utility for grabbing the ROM off an Apple IIgs computer and saving it to disk for use in emulators on other platforms. Written by Sarah Shepherd, this is a \$5 shareware program, sold here on her behalf. Shipped on a single 3.5-inch diskette.

\$5.00

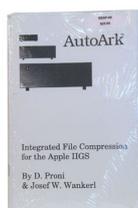

DiskMaker (Diskette) (SYND-04)

Syndicomm

DiskMaker is a utility that lets you write disk images out as disks. With support for standard formats like Universal Disk Image (2mg), DiskCopy 4.2, and DiskCopy 6, and a user-friendly interface, DiskMaker is a handy tool for all Apple IIgs users.

\$5.00

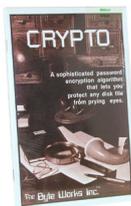

AutoArk (RSSF-02)

Ross Falconer

AutoArk is an automatic software disk compression utility for the Apple IIgs. With AutoArk, you can maximize the use of your hard drive's capacity -- once installed, files are automatically compressed to take up less space, and decompressed when you need to use them in any of your favorite GS/OS programs!

\$25.00

Crypto (BWII-01)

Crypto lets any Apple II computer encrypt files so that they can't be read by unauthorized people. Keep your data safe with Crypto!

\$10.00

Bag of Tricks 2 (MISC-03)

Quality Software

Bag of Tricks 2, by Don Worth and Pieter Lechner, is a great pack of disk utilities for your Apple II computer.

\$20.00

Opus II[: The Software (OPUS-01)

The Byte Works

Here's the complete collection of Byte Works software! You get all of the ORCA products, both 8 bit and 16 bit. You get all of the Quick Click products. You get our educational programs, our learn to program courses, our toolbox programming courses... everything!

\$95.00

Shrink II (RSSF-03)

Ross Falconer

Shrink II½ allows you to compress and decompress Apple II ShrinkIt archives on your Macintosh computer. Also supports Binary II, BinSCII, ARC, and other Apple II archive file formats.

\$15.00

TIFF Reader (BWGS-23)

The Byte Works

This handy utility lets you view TIFF graphic image files on your Apple IIs.

\$10.00

Totally SheppyWare (SYND-01)

Syndicomm

The Totally SheppyWare/Complete Guide to SheppyWare bundle provides all of Eric "Sheppy" Shepherd's software for Apple II, Macintosh, and BeOS systems, all on one CD-ROM. Also included is a printed book, spiral bound, documenting all 50+ products included on the CD!

\$50.00

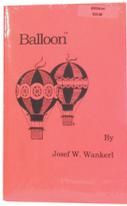

Apple II High-Speed SCSI Card Utilities (APDA-21)

Apple Computer

These utilities let users perform backups, format, and partition their SCSI devices, and allow developers to develop applications that make use of the various SCSI drivers Apple Computer provides (hard disk, CD-ROM, scanner, tape backup). This package is for developers who want to license the SCSI software and for those who want to develop applications that use the High-Speed SCSI card or the SCSI drivers. Additionally, it is provided for APDA customers who own the previous SCSI card and want to use this new software.

\$19.00

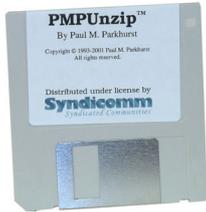

Balloon (EGOS-01)

EGO Systems, Inc.

Balloon is an extra-handy utility for manipulating ShrinkIt files. ShrinkIt is the standard compression format for Apple II files, but Balloon goes a step farther, providing integration with the Apple IIs Finder to quickly and easily compress and uncompress files without launching a separate application.
