Apple III QuickFile: Converting Data to Macintosh

=====

This article last reviewed: 25 March 1988

One method of moving Apple III QuickFile data to a Macintosh involves AppleWorks running on an Apple II with both a 5.25" disk drive and a 3.5" disk drive.

1. Because Apple III SOS and Apple II ProDOS are file-compatible, AppleWorks running on an Apple II can read QuickFile files from an Apple III's 5.25" disk.
2. The AppleWorks files can then be saved to a 3.5 disk.
3. A Macintosh running AFE (Apple File Exchange) can then read, via AFE's Works-to-Works transporter, the files into Microsoft Works.
