Pascal III: Changing text modes

=====

The Write and Writeln procedures are unable to send the necessary control sequences to change the text mode to 40 columns black and white; use the Unitwrite procedure instead. The correct syntax is:

```
Program Demo;
Var ans :String;

Procedure Control (number:integer);
Var tryit :CHAR;
Begin
    tryit := CHR (number);
    Unitwrite (1, tryit, 1, , 12);
End;

Begin
    Control (16);
    Control (0);
    Readln (ANS);
End.
```
