PINPOINT'S PRODUCTIVITY SOFTWARE FAMILY
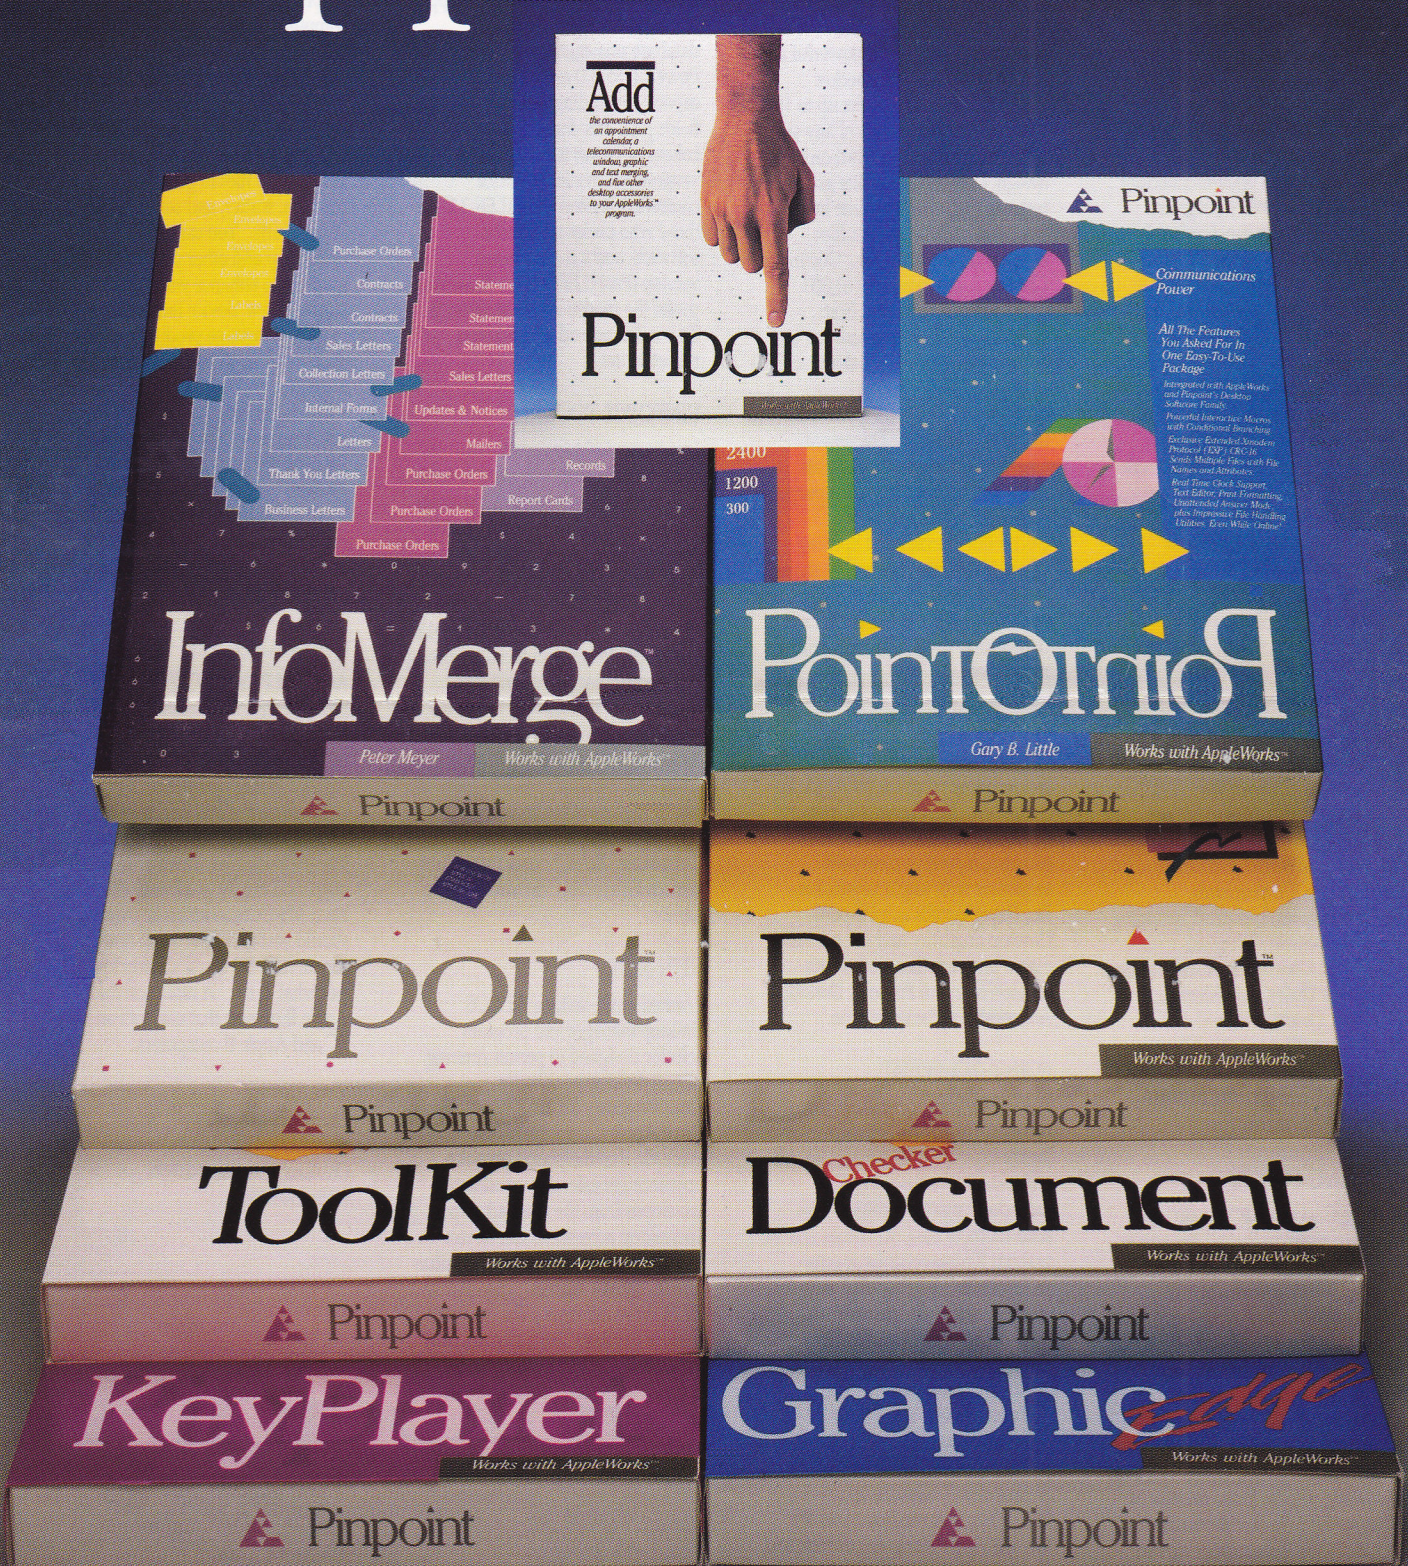

We know of no other Apple II software company delivering a more complete productivity solution: from our family of pop-up desktop accessories to our powerful stand-alone programs like InfoMerge and Point-to-Point.

With Pinpoint's open-architecture software family, every program, indeed most every function has been carefully considered to save you time, effort and frustration. More importantly, our software has been designed in step with AppleWorks itself — the world's best-selling Apple II productivity program. In fact, most of our programs can share data files with AppleWorks so you'll never have to retype or reenter your work a second time!

Look for our fine Apple II productivity programs at your favorite computer retailer:

PINPOINT DESKTOP ACCESSORIES

Our flagship program. Now works with AppleWorks, AppleWriter and WordPerfect!

No other single piece of software does more to improve the performance and productivity of AppleWorks, AppleWriter, ProDOS BASIC, WordPerfect and other selected ProDOS programs.

Eight applications in all, including the Appointment Calendar, Calculator, Communications Window, Telephone Dialer, GraphMerge, Notepad, QuickLabel, and Typewriter. The open-architecture design of Pinpoint Desktop Accessories lets you add additional accessories anytime.

SPELLING CHECKER

Spelling Checker is a "pop-up" spell checking program that allows you to check your work while you write. Without wasting time rebooting AppleWorks or disturbing your work, Spelling Checker checks for misspelled words against a comprehensive 61,000-word dictionary, as well as an unlimited-capacity personal dictionary created from commonly used words (not a set of spelling rules as is the practice of other spelling checker dictionaries). Includes special features of interest to teachers. Without a doubt, this is the quickest, most convenient way to produce your own letter-perfect work.

DOCUMENT CHECKER

The fastest professional spelling checker for AppleWorks, Apple-Writer and ASCII text files. Document Checker is a powerful and lightning-fast spelling checker program that batch checks up to 16 AppleWorks documents of any size. Through its exclusive word cache design, Document Checker greatly reduces spell checking time by storing all words from all files checked during a session. Document Checker uses a powerful 61,000-word dictionary created from common words in frequent use (not a set of spelling rules as is the practice of other spelling checker dictionaries). Also, the personal dictionary feature of Document Checker allows you to create an unlimited number of special purpose dictionaries. Because both Document Checker and Spelling Checker can interchangeably share the same Personal Dictionary you will most likely want to use them both depending on your current writing assignment.

KEYPLAYER

The most comprehensive macro key and scripting program for Apple II computers. KeyPlayer is a "pop-up" macro key program that replaces complex, repetitive command sequences with single keystrokes. KeyPlayer installs as a Pinpoint Desktop accessory and is the ONLY macro program that works with AppleWorks and Pinpoint Desktop Accessories at the same time.

POINT-TO-POINT

This professional communications software for Apple II computers is highly sophisticated, yet easy to use. Point-to-Point's exclusive EXP Extended Xmodem Protocol can send multiple files, file names and all, without file conversions or error-prone renaming. Powerful auto log-on macros, simultaneous downloading with a print option, and real-time clock support round out this outstanding program's offerings.

Point-to-Point is the only communications program that lets you use all 8 Pinpoint Desktop Accessories — all at the touch of a key. Plus, Point-to-Point uses the familiar AppleWorks commands and filecard user interface.

PROFILER 2.2 and 3.0

This high-capacity database manager and report writer for Apple II computers is the complete database management solution. Powerful 65,000 record x 250 field capacity, including free-text comment fields plus free-form or handy columnar report formats. Two versions are available: cursor controlled version (ProFILER 2.2) for those who prefer traditional software, and a mouse based version (ProFILER 3.0) for those who prefer the mouse interface, faster B-Tree indexing and an enhanced report writer.

PINPOINT TOOLKIT

Eight new desktop accessories including the tools you need to write accessories all your own. Customize your Pinpoint Desktop Accessories program with the Accessory Mover, format new disk or copy files with the pop-up ProDOS Filer, and add things up with the Programmer's Calculator with tape. When you feel like writing desktop accessories, or any new program for that matter, you'll find the Memory Window, Video Resource Editor, and the Resource Converter invaluable power tools. It also includes source code and software examples for the Telephone Dialer, Screen Print Utility and an Enhanced Calendar Printing utility.

RUN-RUN

Limited multi-tasking ProDOS desktop manager and program selector designed to permit running of two desktop accessories simultaneously for 128K single disk drive Apple II computers. For example, dial the phone from the appointment calendar, or address envelopes from the notepad. Up to 16 desktop accessories can be run from RunRun's main menu. RunRun also includes a high-capacity disk and RAM drive manager. The program selector displays files by name, date, type, or size. To run any selected application, simply point and select, then press RETURN.

GRAPHIC EDGE

State of the art presentation graphics system for Apple II computers that produces top quality color slides, laser print-outs, colorful charts and graphs and convincing word charts. GraphicEdge starts as a charting and graphing program that works from AppleWorks spreadsheet files to generate line, pie, area, scatter, and several kinds of bar charts. You can then add Print Shop and other popular graphics to enhance your presentations. New 'device independent' graphics language produces color slides with up to two million pixel resolution and one million colors, Apple LaserWriter or H-P LaserJet presentation graphics, plus support for a variety of color printers and plotters.

Pinpoint Publishing also supplies production services for color slides and laser print-outs at reasonable cost and with express mail delivery.

COMMAND.COM

Add IBM PC's MS-DOS commands to ProDOS for a new world of power and the convenience of the world's most popular operating system without giving up full ProDOS compatibility. Now selectively copy files, customize your system with helpful batch files, direct or redirect output on the fly — all with simple to learn MS-DOS commands. And, should you ever have to sit down and run an IBM PC you'll already know just what to do. A real boon for Apple II owners that use both an IBM PC and Apple II computers.
