HELP WANTED

by Stephen K. Johnson

In March we will again hold our annual open board meeting for the purpose of nominating club officers and board members for 1982. If you would be interested in running for one of the elected offices or one of the board positions we have now, or have an idea for a new position which you might like to fill, please contact Dan Buchler or myself. This is your club and we need new ideas and volunteers to make things happen. Please consider getting more involved in your club so you can learn about your Apple II and it's varied uses. We need you.

MINI'APP'LES

P.O. Box 796
Hopkins, MN 55343

MINI'APP'LES OFFICERS

<i>President</i>	Stephen K. Johnson 6053 Wentworth Ave S. Minneapolis, Minnesota, 55419	869-3447
<i>Past President and Newsletter Editor</i>	Daniel B. Buchler 13516 Grand Avenue S. Burnsville, Minnesota, 55337	890-5051
<i>Vice President</i>	Chuck Thiesfeld 8416 Xerxes, Bloomington, Minnesota, 55431	831-0009 830-5020
<i>Treasurer</i>	Marilyn Thomas 2735 Irving, Minneapolis, Minnesota, 55408	872-7669
<i>Secretary</i>	Ron Androff 1725 Crest Ridge Lane, Eagan, Minnesota, 55122	452-5230

MEMBERS OF THE BOARD

<i>Membership Co-ordinator</i>	Ann Bell 8325 39th Avenue N. New Hope, Minnesota, 55427	544-4505
<i>Software Distr. - Mail and Software Sales</i>	Hugh Kurtzman 11622 Live Oak Dr Minnetonka, Mn., 55343	544-7303
<i>Newsletter Editor</i>	Dan Buchler	890-5051

INFORMATION

This is the Newsletter of Mini'app'les, the Apple II Users' group of the Twin Cities of Minneapolis and St. Paul.

Questions

Please direct questions to appropriate board member or any officer. Technical questions should be directed to one of the Technical Advisers listed here.

Membership

Applications for membership should be directed to the Membership Co-ordinator.

\$12 buys membership for one year. Members receive a subscription to this newsletter and all club benefits.

DOMs

The 3 most recent DOMs (Diskettes of the Month) are available at meetings for \$4/disk or any DOM may be ordered by mail for \$6/disk. Contact Software Sales coord'r.

Newsletter Contributions

Please send contributions directly to the Newsletter Editor. Hard copy binary or text files (ASCII coded) are preferred, but any form will be gratefully accepted. Deadline for publication is the 3rd Wednesday of the month preceding the month in which the item might be included. An article will be printed when space permits if, in the opinion of the Newsletter Editor, it constitutes suitable material for publication.

Advertising rates

Rates are as follows:
Full Page \$30/issue
Half Page \$20/issue

Circulation 850 (approx)

DOM #10

by Ken Slingsby

The DOM for January consists of the entire IAC disk #10, some local contributions and some programs taken from the Mini'App'Les Library. The later was in existence before the DOM began.

From time to time, as space permits, material will be selected from that Library. Please let us know if this practice should be continued. Most of the Library programs on this DOM are from Call-Apple.

The first programs on DOM #10 are locally contributed.

LOGO

Some time ago, Tim Pfaff thought the DOM should have a logo. This logo should be something that becomes a trademark for the organization. This logo is not quite the same as the logo used in the newsletter, so perhaps a separate logo could be adopted for the DOMs. I am not sure how Tim created this logo, but there is an ample supply for some future DOMs. Here is another opportunity for comments.

AUTO PROGRAM

This program will write some of a new program for you. It is an adaptation of a similar program written for the TRS-80. Bill DeCoursey has rewritten it to work for the Apple. The program asks whether the user wants standard program parts to be included in the new program. These standard parts include such things as clear the screen, 'get' input, string array set-ups, etc. The resulting program segment is saved as a text file waiting to be exec'ed into a larger program.

SOFTWARE NOTE

The next group of programs comes from the IAC disk #10. They are a collection of hi-res graphics demos from fellow Apple users in Europe. Some of the file names are beyond me so I will not attempt to explain them all. Suffice it to say that they all can be 'RUN' and all will produce hi-res pictures or displays. Be sure to let the program DA BIN ICH run to its completion.

GAME SOUNDS EDITOR

This program will produce sounds on the Apple speaker in accordance with the user entered values for pitch, duration, rise or fall. The resulting sounds can be used in games of the user's writing.

STRING SWAP DEMO

What happens to the Apple when you write a program to sort string arrays? If you have tried this, you will notice that the sort goes on great for a while, then the computer appears to 'hang' for a minute while it does an automatic FRE. This becomes necessary because the string arrays become defined and swapped. In the process many unused string arrays are left taking up lots of memory. Here is a demonstration of a swapping technique that does not create those unused strings waiting for 'garbage collection'. By Randy Wiggington.

ANAMATION

This short program is a lo-res kalioscope. It is from the library.

ANAMATIONS

Here is a program from the library that will entertain the pre school kids. It is a series of lo-res displays that they find captivating. By R. Bozek.

MEET THE COMPUTER STORY TELLER

The Apple computer can be a great original story teller. If you believe this These programs from the library will get a chuckle anyway. From Personal Computing.

REAL ESTATE PLOT

One of the uses for an Apple could be in selling real estate as this program demonstrates. The original author is unknown. From the library.

SWORDS & SORCERY

This is an adventure program using only the text screen and your imagination. From the library. Written by Bruce Turrie of Belgium.

CALENDAR FOR PRINTER

The free calendars around the first of the year seems to have all but disappeared. With this program and an 80-column printer you can create your own for many years to come. Line 200 may need some adjustment for different printers. From the library. By Phillip Zimmerman.

DISPATCH TABLE LIST

If you do assembly language programming, there may have been times when you have wanted to use some of the routines in the Applesoft ROMs. This program gives the entry points for several of the routines. For further info see the IAC magazine of about a year ago. From the library. Written by Neil Konzen and Val Golding.

NEW PRODUCTS

by Dan Buchler

This is a new column for our newsletter. The club receives a large volume of mail announcing new products, or making an offer to sell something. Most of these announcements are replicated in ads that you can see in the journals. However, some are quite interesting and we will attempt to bring you a glimpse of those without taking too much space. In many cases further information may be obtained by calling a club board member.

CHESS-PROBLEMS

From Finland; a Chess problem solver called ALYBADIX-81. Features are:

- Knows all moves
- Draws the Position in HIRES and prints a title.
- Gives all solutions which have different Black's first moves or White's second move.
- Prints Black's defensive moves if the problem has no solution.
- Prints all moves made by the program.

Several versions are available all of which use the Apple Silentye for printout. Price for each version is \$50.

Chessol/Ilkka Blom
Palosaarentie 13-17 c 27
SF 65200 Vaasa 20
Finland.

64K RAM BOARD

LEGEND has announced a 64K-byte RAM board. That's the equivalent of 4 16k boards on one board. It uses the new 64k-bit dynamic RAMS, so you only need 8 chips. (Incidentally the cost of the 64k-bit RAMS has come down to about \$9 so you may see a lowering in price of these boards from their announced list of \$350 each.) If you buy two of them, you get a Disk Emulator software package that allows you to use the two boards as if they were a single disk drive. The price of two boards and the emulator is \$700. You can also use the emulator with one board where it emulates half-a-disk. The RAM boards are 3 times faster than a disk.

Of course you may use the RAM board just like a Language card too. It uses the same Device Select Address convention as Apple. See 32k Ram board review in November Newsletter.

At least two companies are designing 256k-byte boards which may have to be stored external to the Apple (like DTACK GROUNDED elsewhere in this newsletter)

APPLE PIE Reincarnated

Some of you may know that Programma International went 'down the tubes'. Hayden Software has bought the rights to the Apple Pie Word Processing system which yours truly and many others in the club use and like. Hayden has re-introduced Apple Pie to the market and will offer an enhanced version with a brand new manual (badly needed) in the first quarter '82. The enhanced version will include in addition to the current excellent features of Apple Pie:

- Proportional spacing.
- Use of control characters in justified text.
- Somesort of disk spooling.

MOUNTAIN MUSIC BOARD

Mountain Computer has reduced the price of their Music board from a list of \$545 to \$395. Be careful if you are thinking of buying one as many stores have stock they purchased at the old price! Many of you have seen and heard it at club meetings or at Boody's special meeting in Nov. Byte magazine had an extensive review of it in the July 81 edition. It is a really fantastic piece of hardware.

PASCAL GROUP

by Daniel B. Buchler

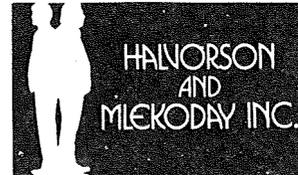

I attended part of the Pascal meeting on Dec 2nd. I want to take this opportunity to thank the Pascal members for helping fold the December newsletter so that it might be mailed for a regular first class stamp without the 9 cent over-size surcharge.

Keith Madonna started the Pascal special interest group about 2 years ago and really does a magnificent job in providing an interesting and educational environment for those who attend the meetings. If you are a Pascal user, or even thinking about becoming one, go to one of those meetings.

(The following program has been donated for use by Mini'app'les members. It is not expected to be available on cassette or disk!)

EPSON PRINTER NEWS

by Daniel B. Buchler

1. Mr Barden, the fellow in North Carolina publishing a newsletter has moved to:
 136 Candlewick Drive
 Wendell, NC 27591
 Information curtesy Joff Morgan, Call A.P.P.L.E.

2. We found a local ribbon re-inker and are trying to get enough ribbons together to try him out. We need 12 ribbons for the first order. After that, he will attempt to stock re-inked ribbons at about \$5 a piece. So, if you have a ribbon you can let go for about 2 weeks to get re-inked please let Dan Buchler know.

Incidently, Al Peterman when he ordered the last batch of ribbons from the Chicago Epson supplier, received a different make of ribbon. They are much more heavily inked than the earlier Epson ribbons. In fact, they are so heavily inked that for the first hour of printing they blotch badly. Also, if you stop printing the ink tends to accumulate

in one place. With use, the ribbon is improving and was OK to print this newsletter. I have seen this exact same phenomenon on ribbons for Teletype 43s.

3. Al Peterman says that the newer versions of the Tractor Feed option from Orange Micro are significantly improved due to the inclusion of an extra support roller above the platen.

4. Anyone contemplating the purchase of an Orange Micro Grappler Interface board should understand the pros and cons.

Pro - it gives you at your finger tip a screen dump and other features.
 Con - you pay alot extra for features that can be had on a disk free of charge and, you get a very non-standard piece of hardware. Programs that use PR#1 will work OK with it, but programs that interface directly with the Apple I/O will not work at all. Examples: the Mini'app'les screen dump (of course you would'nt need it), Buchler's Hiprint and similar things which may come along in the future.

5. At least 2 local dealers are sending personnel to an Epson Maintenance school and are willing to fix Epsoms not purchased from them.

Apple Soft Keys

by Pete Lemay

Function keys are found on many higher priced terminals. They are keys that can be programmed to represent almost anything the user wants. Because they are programmable, they are also called soft keys.

Many of these terminals will also display labels which describe the function of each soft key. The labels are usually displayed on the bottom row (or rows) of the screen, and; in most cases, each label lines up with its corresponding soft key on the keyboard. This allows the user to visually connect the label with the key.

Soft keys can be programmed on the **Apple II**. Special function keys are missing, but any key will serve. I've included an example that uses the numeric keys (1 thru 4). There may not be a direct label-to-key visual correspondence; but, with a small number of soft keys, it is not so important.

The listing shows a program, written in **Applesoft**, that illustrates a way of providing soft keys. The essential procedures are at line numbers 31100, 31200 and 31300. The rest of the program is a demo which shows how to use the procedures. I will describe the procedures in more detail.

Set Up Labels

This procedure, located at 31100, initializes the labels. It is here that you can give visual meaning to each label. This example allows for four labels of eight characters each, but you are not limited to that.

Display Labels

To display the labels, first the cursor is moved to the bottom line. Then INVERSE mode is turned on, each label is printed, and the program is returned to NORMAL mode. POKE 35,23 causes the labels to be locked on the screen while scrolling occurs above them, and the VTAB 1 gets the cursor up out of the locked area of the screen.

Get Results

Finally, in line 31300, we have the routines which input the results of pressing the soft keys. A GET is used, together with a one-character string variable, so that the user does not have to press the return key for each selection. If the key that is pressed is not one of the valid soft keys (1 thru 4 in this case), the GET is repeated. In 31330, the input character is converted to a number for use in the outer program (e.g., line 70). Before returning, the labels are unlocked.

The procedures shown here can be used in any Applesoft program which provides interactive choices to the user. If nothing else, they serve to further illustrate the flexibility of the **Apple**.

APPLE + 68000 = DTACK GROUNDED

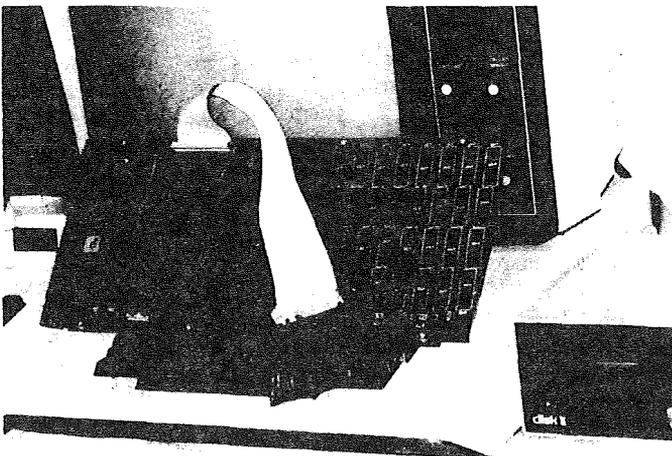

Round 2

Summarizing Dtack's Newsletters 3 thru 5
by Dan Buchler

In the October (81) issue of Mini'app'les, you were introduced to Dtack Grounded (DG). For those of you who didn't see that article, DG is a product forthcoming from Digital Acoustics of Santa Ana, Ca.

The product consists of an Apple Interface board and a large externally mounted P.C. board with a Motorola 68000 16 bit Microcomputer and 4k bytes of on-board memory. The memory is expandable up to 92k bytes (not 16 bit words as reported in last issue) on same board, and up to 16.711 million bytes if you have enough boards and power supplies!

The minimum 4k byte memory system pulls 0.7 amps and may be powered from the Apple itself. Provision is made to separate the 68000 board from the Apple power bus, so an external 5v supply may be, and must be, used for larger memory configurations. DG will not supply that power-supply. The price for the 4k configuration will be \$775. A picture of the configuration is shown below. The 'little' Apple Interface card may be seen with the unpopulated 4k main board. The 68000 MPU is the large IC on the left of the big board.

DG will also market an expansion board (to help you reach 16.711 million bytes). The board will have space for 128k bytes. Since they had space left over (the expansion board is the same size as the main board), they plan to include a "pink marble statuette of a naked lady with a clock for a navel" -- oh; excuse me, DG later modified that to include a real time clock (that works) instead.

To those unfamiliar with the microcomputer industry, the 68000 is the king of micros. It is expected to be the processor for the next generation systems. It is super powerful. Rumours abound that announcements of 68000 based systems are imminent from Tandy and Apple!

In DG's first release which is expected at any moment (in fact you may order one today), the 68000 will perform the Floating Point manipulations. This it can do much more efficiently than can the 6502 in the Apple. Later versions will rely on software support from software houses such as those engaged in compiler writing in order to make greater use of the 68000's capabilities.

Floating point operations are required even in the most mundane internal book-keeping type software such as:

```
FOR I=1 TO 1000:.....: NEXT
```

where the Applesoft Interpreter must perform the equivalent of

```
I = I + 1
```

In order to make the 68000 do these floating point manipulations, DG will provide software which will work in conjunction with a 'language board' (or any upper 16K expansion board). That software will among other things comprise:

- Routines to allow the 6502 to communicate with the 68000.
- The 68000 floating point code.
- Some simple modifications to the RAM (language board) resident Applesoft to link the floating point operations through the communication routines (a) into the 68000 code.

DG will provide an initialization routine (probably written in Applesoft) which will cause the 68000 Floating Point code (item b.) to be transferred

from the 6502 RAM into the 68000 RAM (4k+) so that the whole kaboodle can start working.

DG has published alot of benchmark results using their board on a PET (CBM) with which for some unfathomable reason they decided to initiate development. The PET also utilizes the 6502 MPU and an almost identical version of Microsoft Basic. Because of internal hardware design constraints, the PET Basic is about 15% slower than Applesoft. In those benchmarks, they have extrapolated the speed improvement which might be expected using a compiler such as the one sold by Hayden. Two of their benchmarks were:

```
A B=SQR(3):FOR I=1 TO 5000:A=B/I:NEXT I
B FOR I=1 TO 5000:A=LOG(I):NEXT I
```

	Benchmark_Times*		Speed_Ratio	
	A	B	A	B
Applesoft Interpreter + 6502 FP**	29.3	127.8	1.0	1.0
Interpreter + 68000 FP	17.7	20.9	1.65	6.1
Compiler + 6502 FP	16.2	116.5	1.80	1.1
Compiler + 68000 FP	4.6	9.6	6.4	13.3

**FP=Floating Point
* DG's Interpreter times reduced by 2.6 seconds to allow for improved speed of Apple over PET

Notice that the compiler itself improves throughput by no more than 1.8:1 for the particular benchmarks used here. This is consistant with reviews of compilers reported in Mini'app'les, Softalk, Call A.P.P.L.E, etc. The reason is that a significant portion of the interpreter time (14.8 seconds for Benchmark A) is used up by Interpreter overhead. Thus, a compiler makes most impact in a number cruching application rather than in a logic or text processing application. This is of course the opposite of the impact gained by use of the DG board. For bechmark B, the overall throughput including the compiled code is 13.3:1

Now, DG is encouraging one or more Compiler writers to make a version for an Apple with a DG board. Futher, if that compiler allows variables to be stored in 68000 memory space rather than

in 6502 memory space, then the need to transfer the data from 6502 to 68000 memory and back again is eliminated. In such a situation, the 13.3:1 number above would then become 16.7:1. In such an environment, the 6502 performs the logic and I/O and the 68000 does the computational work (something like the Z80 board).

In closing the subject of speed, it must be noted that many factors effect throughput. A large Applesoft program runs slower, and one with many variables runs slower. The DG board does nothing for that. A compiler will help that situation. The ultimate solution to all of this is to have a compiler which generates 68000 native code leaving the 6502 to do nothing but the I/O. Then, your speed improvements would be maybe two times again. Moreover, if you have a fully populated 68000 board, one can get much more efficient use of memory since the 68000 is a 16 bit machine with a vastly superior instruction set. Again, such a development is not outside the realm of possibility, though DG least of all is making no promises.

According to DG the 68000 is really a neat computer to program in Assembly Language. ".....there is absolutely no comparison whatever in the ease of programming a particular application between it (the 68000) and the 6502. The 68000 wins hands down." However DG recognize that the 68000 is a new machine with alot of new syntax. To help in the education process, DG will provide with their board a menu driven program that 'walks' through the syntax for all the options for a particular instruction.

Well thats the meat of DG'S last 3 installments. Now I await a letter from Hal Hardenbergh, president of DG, telling me I am a 'cur' for mentioning his pink lady!

DOM #10 Continued from page 3.

MUSIC MAKER

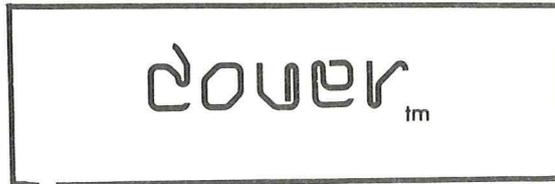

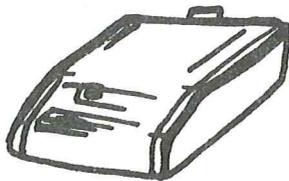

This program will allow you to input simple tunes and play them back thru the Apple's speaker. The sound does not compare with the synthesizers on the market now but neither does the price. Written by Bob Sander-Cederlof. From the library.

Apple /// News

by Keith Madonna

Apple computer has come out with another fine product, called 'PROfile' It is as you may have guessed, a hard disk. Now for a few details:

It can store about 5,013,504 bytes, or simply 5 Megabytes, or about 1200 pages of single-spaced typed text, or as much as 35 conventional floppy diskettes. This storage is accomplished using 4 surfaces (2 platters of 5.25in. diameter), with 153 tracks per surface, 16 sectors per track, and 512 bytes per sector. The drive characteristics are as follows:

- Drive ready to operate from cold start in 60 seconds
- Average seek time 95 milliseconds
- Data transfer rate 5 Megabits/second
- Data may be transferred one byte at a time, or by direct memory access (DMA) at one Megabyte per second. The DMA is accomplished by disconnecting the Apple /// processor, and transferring into memory under of the hard disk processor. The disk I/O speed can be increased by a software change, which disables file verification on writing (default is verify on a write operation).

Now for some dimensional data:

- Height 4.39in.
- Width 17.28in.
- Depth 8.81in.
- Drive weight 11lbs. including power supply which is built into the unit.

The hard disk motor speed is controlled by a built-in card, which maintains a spindle rotation speed of 3600 RPM, plus or minus 1%. On a cold start the disk takes 20 seconds to reach it's operating speed, and an additional 40 seconds to do a check on the surface media, before data can be stored. Thus, nominal start up time is 1 minute. However, if the verify detects an error, various correcting procedures are attempted. An abort will only occur if the system has been unable to bring the system on-line within 3 minutes.

The disk drive also has a mechanical brake to stop it quickly whenever power is removed. This is important only because the heads (4) are in contact with the surface during start-up, and shut-down.

Another important point is the time of in-use hours between failures; that is mean time between failures (MTBF). This is specified as 10,000 hours.

Three pieces of hardware are shipped with the unit:

1. 25 conductor cord.
2. An interface card which plugs into one of four slots in the Apple ///.
3. The hard disk & power supply (all in one unit).

Also two pieces of software come with the disk:

1. A 'PROfile' driver diskette,
2. A demonstration diskette.

By the way, the disk drive cannot be used to store Apple II software in any mode, even emulation mode. Data or programs have to be in Apple /// format to be saved to the hard disk. All new software releases will be made with the new version of S.O.S. 1.1. The cost of the hard disk package is \$3495.

In the flyers sent out by Apple are mentioned two new software packages being released: Applewriter ///, and Mail list manager.

Also about to be released by Apple are:

- A memory board which will boost your total memory capacity to 256k.
- A new Apple /// monitor for \$322 (which comes in black/white or green screen, both non-glare). This monitor is the best I have seen to date.
- Another card for inside the computer; a Universal Parallel card - three parallel cards in one for \$225.

BULLETIN BOARDS

by Daniel B. Buchler

This is an update of information previously printed in Dec, 1980 issue of Mini'app'les. Update information from the BIG APPLE (NYC) (Oct/Nov 81) which in turn had reprinted a list originated by the People's Message System, Santee, CA. This is a 4+ page index of bulletin boards including 3 systems in Europe. Anybody want the numbers?

The following are local (area code 612) bulletin board systems which may be accessed by the general public at no charge. All are privately owned systems, some by individuals at least one by a retail organization.

APPLE MAGAZINES

by Dan Buchler

For the benefit of newcomers to the world of Apple, the following are recommended reading material and are all 100% devoted to Apple.

SOFTALK Free - entirely paid by advertising. Non technical. Reviews, biographies, new products, report on best selling software plus a few educational articles. Lots of ads, particularly for games. To get on the free subscription list, send your name, address and Apple Serial number with a request for subscription to:

Softalk Circulation
11021 Magnolia Blvd.,
North Hollywood,
CA 91601

NIBBLE is a programmers' magazine aimed at beginning and intermediate level. They have published some real excellent software including Word Processors, Home Finance, Data Base Managers, Print Using and other subroutines, High speed sort techniques and last but not least games. Their philosophy is to publish a program and to help the reader understand how to modify the program for his/her own needs.

We also have a Nibble Special Interest group so that if you are a subscriber, you may not have to key in the program, except once and a while when it is your turn to do so. Pick up a copy at your dealer or send \$17.50 for one year (8 issues) to:

Nibble
Box 325
Lincoln
MA 01773

CALL APPLE is the publication of A.P.P.L.E., Apple Puget Sound Programming Library Exchange which has become the largest Apple user group by virtue of their magazine and software. Current membership is in the order of 10,000 (I believe).

Their magazine is the most technical of the Apple publications catering to the intermediate and advanced levels. Their software, which is copyrighted, is exemplified by the Program Line Editor, an editor for use when coding in Applesoft, probably the best of its kind in the

market, and sells to members for \$22.50!

To join, you need \$40 (\$25 one time Apple-Cation plus \$15 annual dues which pays for the magazine! Send to:

CALL APPLE
304 Main Ave S., Suite 300
Renton
WA 98055

APPLE ORCHARD

We sell this at club meetings. It is the official publication of the IAC and caters to beginning/intermediate level.

MINUTES

OCT REGULAR MEETING October 21st 1981

by Ron Androff, Secretary

Meeting was called to order at 7:30 by our president.

OLD BUSINESS. None.

NEW BUSINESS. None.

Meeting was ajourned at 9:15

NOV REGULAR MEETING November 18th, 1981

by Ron Androff, Secretary

Meeting was called to order at 7:40 by our president.

OLD BUSINESS. None.

NEW BUSINESS. None.

Despite the first real blizzard of the year, over one hundred members braved the elements to attend - BRAVO to you all. The program on control devices was presented by Mike Birnbaum. He demonstrated inexpensive ways to control or measure temperature, light, moisture and mechanical position. Thanks to Mike for an excellent presentation.

Meeting was ajourned at 8:06.

STATE OF MINNESOTA

DEPARTMENT OF REVENUE
CENTENNIAL OFFICE BUILDING
SAINT PAUL, MINNESOTA 55145
PHONE: (612) 296-6182

Walter C. June
The Code Room
18216 Ginavale Lane
Eden Prairie, MN 55344

In Re: Account #5461449

Dear Mr. June:

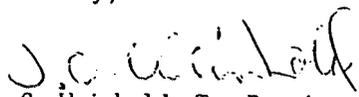

Reference is made to your letter dated January 14, 1980 regarding the Minnesota Sales and Use Tax.

Sales of standard or "canned" computer programs and custom computer programs are not subject to the Minnesota Sales and Use Tax. Such programs are classified as intangible personal property and are therefore exempt from the tax.

Enclosed is a copy of Minnesota Sales and Use Tax Regulation 610 which provides information concerning automatic data processing.

If additional information regarding this matter is required, please contact this office in writing or by calling telephone number (612) 296-6181.

Sincerely,

J. C. Weinhold, Tax Examiner
Sales and Use Tax Division

SFTW SALES TAX

by Dan Buchler

JCW:Sad

Enclosure: Tax S&U 610

As pointed out in last month's newsletter sales tax is not chargeable on Software in the state of Minnesota. Thanks to Roy Dehler of TCTUG we are including herewith a copy of the letter written to the Code Room by the state of Minnesota.

AN EQUAL OPPORTUNITY EMPLOYER

MINI'APP'LES MECC ORDER

MECC disks may be ordered only by Mini'App'Les members who are residents of Minnesota. The diskettes were developed for the Minnesota schools by Minnesota Educational Computing Consortium, a tax-funded agency, and you are not to make copies for non-residents.

We refer non-residents to MECC Publications 612/376-1118.

Speeding Up Correspondence

by Stephen K. Johnson

As announced in this newsletter two months ago, Mini'app'les has a new mailing address. Unfortunately, because four people have access to the post office box and much of our mail isn't labeled as to whom or for what department of Mini'app'les it is intended, mail is opened by whoever checks the box on that day. This may result in a delay handling your correspondence.

To speed things up, we ask that you use the second line of the address to indicate to what department or to whom the mail is directed.

Example:

Mini'app'les
Software Sales Coordinator
P. O. Box 796
Hopkins, MN 55343

Additional possible second lines could be: President, Newsletter Editor, Newsletter Exchange, etc. We request that ALL DISK-OF-THE-MONTH orders, NEWSLETTER EXCHANGES, and General Correspondence be sent to P. O. Box 796. However, several members have sent membership dues to the P. O. Box. This may result in a delay of upto one month in processing your membership. PLEASE continue to send your membership dues to:

Ann Bell
8325 39th Avenue N.
New Hope, MN 55427

Thank you for your cooperation.

CLASSIFIED

IDS Paper Tiger 560 Dot Matrix Printer. 9 wire head, Wide carriage, "Tiger Tracks", New Condition.

\$850 Tim Churchill 890-8771

Terminal Stand - Metal with walnut grain Formica top. 30" by 60" with 18" by 36" offset return. Only 7 months old. Excellent condition.
MUST SELL.

Originally \$700 asking \$400
Carl Savaiano 474-1663

New Parallel Printer Card and Disk Controller Card with switched 3.2 and 3.3 Proms

also
Andex Monitor Video 100 Black and White Monitor.
Reasonable

Warren Ostlund 926-3122

Mountain Computer Clock Card with New Battery - Never used - \$175 Firm.

Herbert Olson Elementary School 831-3666

Centronics 779

\$300 (negotiable)
Hank Stroll 930-5395

Centronics 730 1-a

Printer. Upper case only 100cps, 132cpl. Was modified by CENTRONICS to print 5 European type-fonts. Complete manuals. CHEAP!

Roy Brandt 572-1326

Wanted to Rent:

Centronics 737

Printer for 2 or 3 months.
Roy Brandt 572-1326

PRINTER PAPER

This is not a paid ad but a piece of information supplied by your Editor!

The 'House of Forms' is a new forms supply store owned by Custom Business Forms offering reasonable prices and walk-in availability of printer paper. It is located at:

20 North First Street

Minneapolis, 55401.

Contact Delores Miskowicz, 332-4866

This is just around the corner from Custom Business Forms who are on Hennepin Avenue.

EPSON PRINTERS BMC MONITORS

If you are in the market for an MX-80, an MX-100 or a BMC Monitor, you should contact Al Peterman, who can order those items for you at special club 'bulk' prices.

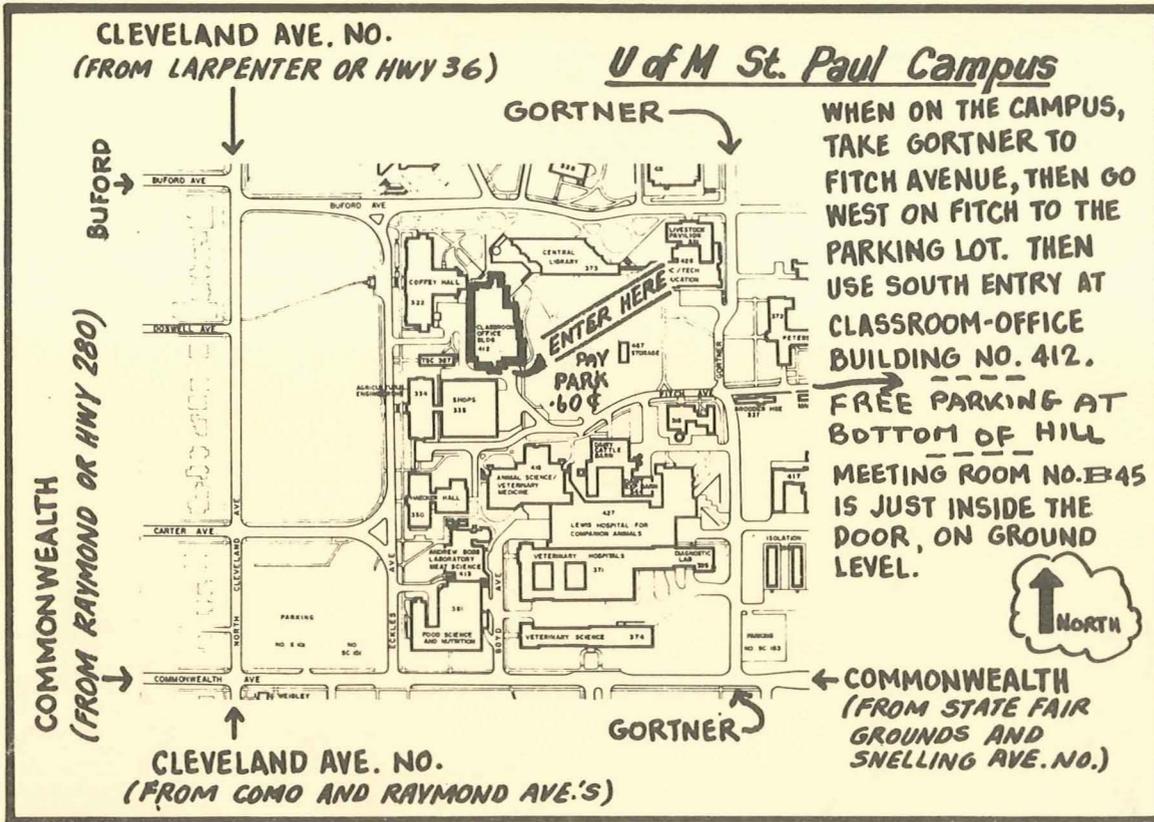

Al Peterman 721-3295

ORDERING DOMs

A reminder that DOMs are available by mail at \$6 each. Send your order to:

MINI'APP'LES DOM's
Box 796
Hopkins, MN 55343

Usually the latest three DOM's are available at club meetings for \$4 each. Because of the volume of disks distributed, they are not tested. Club members are asked to make every effort to get the DOM running. For example, occasionally the DOS on the disk will be bad, but it will catalog OK and one can run the programs. Master Create on your System master disk will fix-up the DOS. Of course, if you have a disk with bad programs, we will cheerfully replace it!
