VOL. 1, NO. 2

\$2.00

**Super Nim ...  
Connection ...  
... and more!**

## APPLETALKER

Gives Apple II\* the power of speech  
**WITHOUT** hardware costs

The APPLETALKER accepts voice or audio information through the cassette input port, digitizes the information and stores it in numbered tables in your computer's memory for later playback using Apple's\* on-board speaker. You can also SAVE tables to tape for later use. Comes complete with all the routines and instruction you will need. Demo program also supplied.

Apple II\*, Integer 16K, \$15.95

# FASTGAMMON

Backgammon is a two-person game.

In FASTGAMMON the computer is one player (its men are O's) and you are the other (your men are X's).

Whether you are a beginner or an experienced backgammon player, FASTGAMMON can help you improve your game. First of all, you now have an opponent that is always ready and willing to play. There is no substitute for experience — the more games you play the more you learn about backgammon. But there is another unique method by which FASTGAMMON can help you improve your game.

By selecting "2" when the starting message is displayed, the same sequence of rolls that occurred in the game just played (the last game for which you selected "1") will occur again.

## HOW GOOD IS FASTGAMMON?

We make no claims that FASTGAMMON plays at an expert level. In fact, good players will notice obvious mistakes that the computer makes from time to time. The game of backgammon has many subtleties, and the algorithm programmed into version 1 of FASTGAMMON is a fairly simple one. There is an advantage that the computer has, however, over human players — the computer never forgets what it "knows". Due to oversights, distractions, or haste, human players often forget what they know. This fact is the edge that makes FASTGAMMON competitive against good players.

## VISICALC\*

$$e=mc^2$$

Now you can dispense with pencil, paper and calculator — instead you can have an “electronic sheet” to do your calculations, projections, planning!

Calculate sales projections, income taxes, personal budget, cost estimates, engineering changes — even balance your checkbook. Visicalc is partitioned into a matrix of rows and columns. At each position in this matrix you can define a title, formula, or number. By writing on your “electronic sheet” you can set up individualized charts, tables, and records. For example, you can design your own sales forecasting format to assist in making the important “What if?” business decisions.

What would happen if sales increased by 10%?

What if delivery time were decreased by 2 weeks?

What would be the result if I produced 500 widgets this month instead of 600? What if I produced 700?

Let Visicalc assist you in performing these calculations and save you countless hours.

Visicalc requires 32K Apple II with one disk drive. **\$150.00**

# EDITORIAL

I've owned my APPLE II\* computer for over two years now and one fact has never ceased to amaze me: the proliferation of good software. From BREAK-OUT and STAR TREK, which consumed hours of my time 2 years ago, to SPACE INVADERS and ADVENTURE games which consume my spare time today.

Decent software has been written by eight year old children, by octogenarians, by men and women alike. And, by good software, I don't mean simple Tic-Tic-Toe games. I mean well-thought-out and documented programs. Programs that can maintain your bank accounts, your address book, help compose letters, assist in business planning, teach languages or sciences, and entertain.

The point that I'm trying to make is that it is not difficult to do a good programming job — if you really want to. The easiest way to begin is to write a program on something you are very familiar with. Determine what it is you really want the program to do. Chart out the logic flow of your idea. Try to disassemble the program into independent logical blocks. Only when you have thoroughly thought out your task should you begin with the actual coding. The coding phase of your program should be the shortest task of all if you are well organized.

No program is without those isidious little bugs that seem to appear when they were not expected. Many articles have been written on techniques to de-bug a program. SoftSide: Apple Version, will run a short piece in a future issue. But for now let me recommend reviewing the logic flow and trying the program with parameters that will give known answers. More later.

Okay, the program is completed. All known bugs have been exterminated and it runs beautifully. You are very proud, and rightly so! But now what? I've got a suggestion. Share it with others who might also appreciate it. An easy way to do this would be to send the program and whatever documentation you have on it to SoftSide: Apple Version.

We will review the program and, if there is sufficient appeal, publish it in a future issue. Of course you will get the proper credit for your hard labors. We will even pay you for the privilege of publishing your program. But the biggest reward is seeing your name above a published program.

You can contact me about your program at the SoftSide address.

**MDW**

**FROM:**

# **Synergistic Software**

## **HIGH ADVENTURE**

**Wilderness Crusade** -- Free the kingdom of Draconia from the Evil Necromancer! Your party must overcome obstacles, defeat hostile inhabitants, survive natural hazards, explore tombs, temples, castles, and ruins, in search of gold and magical devices.

**48K Integer; Cassette \$14.95, Disk \$17.50.**

**Dungeon Campaign** --Direct an expeditionary force into an underground labyrinth. Catacombs filled with treasures and hazards, poisonous vapors, evil sorcerers, stairways, pitfalls and an incredible assortment of MONSTERS.

16K Integer; Cassette \$12.50, Disk \$14.95. Both adventures on disk. 48K Integer, \$29.95.

## WORKHORSE

**Mailing List Database** -- Entry and storage of a list of names with associated addresses, cities, states, zip codes, phone numbers, comments, and code designations. List, search, edit, print labels; convert prior mailing lists. Up to 225 records can be loaded on line at any time.

48K AppleSoft, Disk \$34.50.

## PROGRAMMER'S DELIGHT

**Higher Graphics** -- A complete set of shape generation, manipulation and utilization tools for the programmer. Quickly and easily, you add sophisticated graphic displays and effects to your programs. Shape Maker, Table Combiner, Screen Creator, 4 shape tables, 3 high-res displays, and the machine language graphics routines required to produce high resolution graphics on the Apple II.

48K, Integer Basic, Disk \$24.95.

# **SUPERNIM SUPERNIM SUPERNIM SUPERNIM SUPERNIM SUPERNIM SUPERNIM SUPERNIM**

**by Dr. Jerry Dubnoff**

SUPERNIM is a game of skill and derring-do, a masterpiece of give and take. The man and machine alternate turns removing pieces from the screen display. From 1-3 pieces may be removed. However, if more than one, they must be taken adjacently, horizontally or vertically. The player with the last piece on the board wins.

With roots stretching into the middle ages, NIM has become a traditional computer game. However, it is normally only played in one dimension. SUPERNIM, by adding a second dimension, is a great deal more challenging.

Ideally, SUPERNIM will run in APPLE II\* systems having FIRMWARE, APPLESOFT\*, and 16K free memory. It should run, also, in 24K systems with APPLESOFT\* in RAM.

SUPERNIM will amuse and challenge you. As Ali Haho, ancient Arabian Nimist and philosopher once said:

"May you pick the last camel and be aboard his  
back five minutes before it occurs to him to spit."

**SUPERNIM is a winner!**

## **FORTÉ** **ENJOY MAKING YOUR OWN** **BEAUTIFUL MUSIC!**

FORTÉ is an interpretive language devoted to the playing of music, which allows the operator to use the music playing capabilities of the Apple II<sup>®</sup> in a way that, up until now, required hours of tedious calculations and coding. Now, with FORTÉ, all the hard work is done for you.

Programs written in FORTÉ are as easy to enter, list and edit as are programs written in APPLE'S<sup>®</sup> INTEGER BASIC.

Play music from the computer speaker, or from the cassette output for recording to a high fidelity music system plugged into the output port.

Programs easily saved onto cassette or disk and can be listed to a printer for hardcopy documentation.

FORTÉ was developed to be easy and fun for the beginner, yet capable of handling the most complex passages the veteran can devise! **16K, \$19.95**

**WHO WILL TAKE  
COMPLETE CONTROL  
OF THE EARTH?**

## **GLOBAL WAR**

Features a highly detailed projective map of the earth's continents divided into forty regions. The computer assigns each player a portion of the regions and starting armies. The players can allocate armies to specific regions or attack another player's territory. The object of the game is to take control of the Earth. An adult strategy game for two to nine players. Complete with instruction manual and rule book.

## TEXT Mode

The last executable line of your program should reset the computer to its original state. For example, if you were in graphics mode, your last line should return you to text mode.

**In AppleSoft\*, you could use this line:**

```
999 TEXT : HOME : END
```

**A more general case for AppleSoft\* and Integer BASIC is this line:**

```
999 TEXT : CALL-936 : END
```

## BELL

You can make the output of your program more interactive and more interesting by using the BELL (Control G) in your PRINT statements. Signal an input by prompting the user with one or more BELLS. One way to arrest attention is to place a control-G between each letter.

---

# RND (THOUGHTS)

---

When you load a BASIC program into the Apple computer you will hear two beeps (if it is a good load). These two beeps mean something significant.

There are actually two loads taking place. The first tells the computer the length of the BASIC program to follow. This is the dip in the pitch that you hear before the main program load. Now the computer knows how much data to expect and if it will fit within your system requirements.

The second beep signifies the second (BASIC program) load.

With a monitor load (i.e., 300.500R) you have already told the computer how much data to expect and, therefore, you only hear one beep.

---

There are a number of ways available to you to improve your programming skills — outside of reading SoftSide: Apple Version, of course.

First is your local computer store. Your dealer probably has programming classes in session right now, or would

be interested in forming a class if you expressed an interest. In addition, there are a number of good books on programming that he probably stocks. Ask him for his recommendation.

Then there are the Apple computer clubs that have sprung up all over the nation. The biggest one is A.P.P.L.E., located at 8710 Salty Drive NW, Olympia, WA 98502. They publish a newsletter entitled 'Call-A.P.P.L.E.' that is chock full of interesting items and programming hints. My recommendation is to join A.P.P.L.E. But don't overlook any local computer club that may be able to offer you assistance.

A number of independent newsletters are on the market today. I will present a review of the ones I am familiar with in a later issue.

Finally, there are the computer magazines. Names like Byte, Personal Computing, Creative Computing, and Recreational Computing should become household words to you. Since I subscribe to all of them, I feel permitted to offer my comments. Byte is hardware

(equipment) oriented and somewhat too technical for the beginner (although it does have the largest circulation.) Creative Computing has a good mix of articles. I look forward to receiving my issue each month. Personal Computing has interesting software articles and is easy to read. Recreational Computing is full of software to enter into your computer. It started as a newspaper and was the first computer publication I read. So I owe my loyalty to Recreational Computing. Considering all the time I spend with my Apple, my wife has a different opinion!

Do you have any suggestions concerning programming or the Apple Computer? Why not write them down and send them to SoftSide: Apple Version; attention: Editor. Whatever is bothering you is surely bothering many people. And we can help by publishing your letter with the answer to your problem. Give us a try!

If you would like to write an article for SoftSide: Apple Version, please send it in. Mark it attention: Editor. If your article has appeal to the SoftSide - Apple audience, we will publish it and pay you for it. The same goes for programs. Let me hear from you.

---

## SoftSide?

### What happened to AppleSeed?

After one issue, we have changed our name! A change of ownership? What happened? Actually, we were contacted by Apple Computer Company and politely requested to avoid their trademarked Name. We were happy to oblige.

SoftSide is a familiar name. It is shared by a sister publication for the TRS-80 that is highly respected as the best source of personal applications software for that computer. Now the Apple edition can share that same enthusiasm.

We would also like to invite you to visit our retail store at 6 South Street, Milford, N.H., if you are nearby. And at your local computer store, watch for our RamWare label on fine programs, coming soon!

**George Blank, Editor in Chief**

Note: Apple and Apple II are trademarks of the Apple Computer Company, Cupertino, CA, which has no connection with SoftSide Publications.

Elementary Math is a lo-res Graphics program with sound to assist the youngsters in their addition drills. It is for children in kindergarten through grade two or three. The program has a number of remark statements to assist the parent in modifying the program to suit individual needs.

A SoftSide exclusive!

## ESCAPE

Exciting 3-D adventure with special graphics that place you inside a maze of hallways. Find your way out by following the clues of people you meet inside. But be careful . . . the liars will not hesitate to give you false maps and compasses. It's hard to quit this game! Rated as the number 1 Apple\* program by the Marin Computer Center.

**Cassette, 16K, \$12.95**

**TANK WAR** is a state-of-the-art shootout for two players with dramatic sound and graphics. Players choose the style and size of their tank. Steer your tank with the game paddles to pursue and outmaneuver your opponent. Fire two types of missiles to disable and destroy the enemy. Damage speed and chosen tank size all interact for maximum interest. (16K) \$12.95

**MAZE GAME**, the original and still the best maze game for APPLE II\* users. Set the size and difficulty level of your maze and watch as it is randomly generated. Every maze is different. Special graphics place you inside a colorful 3-D maze. Player options include getting a maze map, having a compass available, and leaving retraceable footprints on the maze floor. Our most popular game and a challenge for the solitary player of all ages. (16K) \$12.95

**SIDE SHOWS** is a collection of six exciting games selected for their originality, ease of operation and imaginative use of the Apple.\*Includes the Apple Tree, Safecracker, Pip Shoot, Minelayer, Blockade and Quadripong. In the Apple Tree two players use the paddles to catch randomly falling apples. In Blockade and Minelayer, try to surround your opponent with a moving wall or mine field. Pip Shoot can be played by two or more and the object is to shoot down as many "pips" as possible. Quadripong is four wall pong with varying ball speed and sound. Use the paddle carefully to be first to open the safe in Safecracker. (8K) \$12.95

**UNCLE SAM'S JIGSAW** is an educational geography game featuring a detailed drawing of the United States. Each of the 48 continental United States must be recognized by its shape and location in a high resolution map of the U.S. The student gets two points for each state he names from shape alone, one point when recognition requires shape and location. Education in its most enjoyable form. Requires AP-PLESOFT\*board and 32K (\$12.95)

**ELECTRIC CRAYON** utilizes the 15 brilliant colors of low resolution graphics to turn your Apple\* into a radiant color display, resembling a moving neon sign. Easily draw and animate color figures directly from the keyboard. Your drawings can be saved on tape and recalled later. Includes documentation. (8K) \$17.95

# PYRAMID OF DOOM

by Scott Adams

On a trek through the vast uncharted center of the Sahara Desert in search of a missing explorer, you come upon a pyramid recently exposed by the shifting sands. Will you be able to collect its treasures and escape? Or will you join its denizens for that long eternal sleep?

24 K Machine Language Cassette \$14.95

Want to know what adventure is before you part with that much money? Try the Adventure Sampler! Adventure 0 is a mini version of Adventure 1, offering hours (instead of weeks) of challenge for only \$5.95.

Warning; This program may be addictive, leading to prolonged and habitual adventuring.

## Eliminating Bad Seeds

There is a fundamental law of science that has spilled over into the publishing field: If anything can go wrong, it will!

In the first issue of APPLESEED we printed a program titled 'Digital Clock' and attributed it to the editor. Well, the editor DID NOT write this program. My name was added, and the program published by mistake and I can only apologize to the author — whomever he/she may be.

Again, my sincere apology to the author of this program.

THE EDITOR

### WORMS?

After this issue was ready to go to press, we were informed of errors in the Dog Star Adventure listing in issue one. Corrections will appear in issue three.

# U-DRAW II™

## COMPLETE GRAPHICS PACKAGE FOR THE APPLE II™

Create a figure and rotate, expand, contract or move it anywhere on your video screen with a few simple keystrokes. Save individual figures or complete drawings on disk and recall them later. U-DRAW II automatically builds and edits multi-figure shape tables that are directly transferable to your BASIC programs. You won't find better graphics capabilities at 10 times the price!

## DR. MEMORY

DR. MEMORY, Disk Word Processor allows the user to insert, delete, change, find, merge and block move text. DR. MEMORY controls left and right margins, inter-line spacing, end-of-page eject, automatic paragraphing, right margin justification, and paragraph indentation. With DR. MEMORY, you can also print UPPER and lower case characters without the need for any additional hardware. This is a highly efficient assembly language program that occupies less than 4k and can be operated at normal typing speeds. DR. MEMORY includes a separate documentation manual plus on-line "Help" reference.

## APPILOT EDU-DISK

APPILOT is an Apple II\* version of the standard C.A.I. language PILOT. APPILOT is a dialogue-oriented language and includes color graphic commands, a musical mini language and disk commands for lesson segmentation. Designed for "Turnkey" operation, APPILOT includes a program editor, program interpreter and extensive on-line HELP lessons to instruct the user on all aspects of program development. Manual included.

# MUSICAL SCALES

by Roger Wagner

Roger Wagner's program, *Musical Scales*, was one of his first programs. Since that time, Roger has formed his own software company: Southwestern Data Systems. SDS produces some excellent utility and graphics programs (see the ads in this issue of *SoftSide: Apple Version*.)

This program will teach you the musical scales in an interesting and enjoyable manner. It uses lo-res graphics and sound to produce the musical notes.

This is an excellent program for the children to use. It will teach them the scales plus get them interested in programming.

## **SUPER-TEXT 48K, \$99.95**

The most innovative word processor available on any personal micro-computer! Includes features previously found only on high-cost word processing systems.

**Advanced multiple paging system allows you to view two text screens simultaneously. You may keep notes or instructions on one text screen while you edit on the other.** •

**Character-oriented editor with complete cursor controls. Move cursor to any position in the text with a minimum of keystrokes.** •

**Built-in floating point math and automatic tabbing facilitate the preparation of all manual reports including financial reports, insurance forms, real estate settlements . . . anything!** •

### **COMPARE THESE INCREDIBLE FEATURES:**

**EDITING** - Full floating cursor. Cursor control - left, right, up, down or to center of screen. Add or insert a character, word or line. Automatic carriage return eliminates a word breaking at the end of the screen line. Delete a character, word, line or screen. Automatic on-screen tabbing and right or left justification of columns. Unlimited text movement. Scroll either a page or a line forward or back. Move to the beginning or end of the text or screen. Move to the last change made in the text. Move to a block marker. Global search and replace (selective or all). Block operations - copy, delete or save to disk. Select multiple or single screen mode. **ADVANCED FILE HANDLING** - Requires only two keystrokes to load or save a file to disk. The file name does not have to be entered which eliminates misspelling and "FILE NOT FOUND" errors. Save entire text or portion of to disk. Complete file merging capabilities. **MATH** - Automatic column totals. Formula computations. User selectable number of decimal positions. Automatically switches to scientific notation when necessary. 14 significant digits.

**PRINT CONTROLS** - Upper and lower case printing without additional hardware. Automatic paragraph indentation. Single or double space printing. Selectable right justification of text. Variable page length and width. Automatic page numbering. Selectable chapter-relative page numbering. Automatic print tabbing. Right or left justification of columnar data. Single sheet or continuous form printing. Superscripting and subscripting. Underscoring. Line centering. Automatic link and printing of multiple text files.

**MUSE**<sup>TM</sup>  
THE LEADER IN QUALITY SOFTWARE

Bring the excitement of Major League baseball to your APPLE II.\* **BASEBALL** is a high resolution action game with outstanding player control. Strikes and outs are tallied and a scoreboard is displayed after every batter. So get up to bat, watch out for those slow pitches, hit the ball and hope that the opposing team doesn't catch it. A challenging game and a must for sports fans.  
**Cassette, 16K, Applesoft\*, \$14.95**

## APPEN-I TEXT EDITOR

A real text editor for cassette based APPLE-II\* computers. Insert, delete or change lines of text in the computer's memory. A 'FIND' command will locate all occurrences of a specified text string. Save your text on tape and recall it later or merge it with another file. 1001 uses in the home - menus, birthdates, addresses and phone numbers, appointments, etc. Easily links to your printer. Complete with easy-to-understand user's guide.

# **SORT**

Sort is a utility program to assist you in reorganizing words or strings. You enter your strings one by one and this program will sort them in ascending order. You determine at what position in each string to sort on. For example, you can sort on the second through the fifth position in each string if you desire.

The sort routine is written as a subroutine to permit you to utilize it in one of your own programs that may need a sort function.

# PROGRAMMING TIPS

## The VOCAL Apple.

The Apple II has a built in speaker that permits excellent interaction between the user and the program it is running. In this article, let's discuss how to make the Apple more vocal and responsive.

Type in this short Integer program:

```
100 GOSUB 260
110 X = RND(100) : Y = RND(100)
120 PRINT "HOW MUCH IS ";X;" PLUS ";Y;
130 INPUT ANSWER
140 IF ANSWER = X + Y THEN 200
150 POKE 0,90 : POKE 1,100 : CALL 2
160 POKE 0,100: POKE 1,100 : CALL 2
170 POKE 0,255: POKE 1,255 : CALL 2
180 PRINT "WRONG! TRY AGAIN."
190 GOTO 120
200 POKE 0,20 : POKE 1,60 : CALL 2
210 POKE 0,30 : POKE 1,60 : CALL 2
220 POKE 0,40 : POKE 1,60 : CALL 2
230 POKE 0,50 : POKE 1,60 : CALL 2
240 POKE 0,30 : POKE 1,255 : CALL 2
250 GOTO 110
260 POKE 2,173 : POKE 3,48 : POKE 4,192
270 POKE 5,136 : POKE 6,208: POKE 7,4
280 POKE 8,198 : POKE 9,1 : POKE 10,240
290 POKE 11,8 : POKE 12,202:POKE 13,208
300 POKE 14,246: POKE 15,166:POKE 16,0
310 POKE 17,76 : POKE 18,2 : POKE 19,0
320 POKE 20,96 )
```

Line 100 starts off this program by branching to a subroutine at line 260.

Lines 260 - 320 put a short machine language program into the Apple's memory. This program will make the Apple more vocal when this subroutine is run. Machine language programs are accessed by the CALL statement; in our case we are CALLING a routine beginning at memory location 2.

Line 110 generates 2 RaNDom numbers for us to add.

Line 120 asks for the answer. If we are correct we branch to line 200 to hear a fanfare. If we are wrong we drop down to line 150 to hear a 'raspberry'. Then back to line 120 to try again.

To exit this program type (CTRL-C) and (RETURN).

When you are finished trying out this program. DELEte lines 110 - 250. This will leave only lines 100 and 260 - 320.

Now try your hand at generating music by typing in the following lines:

```
110 INPUT "ENTER PITCH ";P
120 INPUT "ENTER DURATION ";D
130 POKE 0,P ; POKE 1,D ; CALL 2
140 GOTO 110
```

You can put this short routine in your programs to generate music and to make your Apple more vocal.

# MISSION Impossible adventure

by Scott Adams

Good Morning, your mission today is to . . . and so it begins: will you be able to complete the assignment in time? Or is the world's first automated nuclear reactor doomed? This one's well-named — it's **hard**. Plenty of suspense for real-life drama in simulation!

## THE MUSIC BOX

Cassette, 8K, \$12.95

Start the MUSIC BOX and your APPLE comes alive with sound and color. Play it as a three octave instrument or type in a song and the music box will play it for you! A brilliant full color light show accompanies the music. Standard musical notation includes sharps and flats, note time, rests, dotted notes and tempo. All notes can be easily returned from the keyboard to produce special sound effects. Comes with two songs and documentation that explains basic musical notation.

# PROGRAMMING TIPS

If you read last month's programming tip, you now have some familiarity with the Apple II editing capabilities using the ESC-A,B,C, or D combination. Let's go a step further.

As a reminder:

ESC-A	cursor right	ESC-C	cursor down
ESC-B	cursor left	ESC-D	cursor up

Type in the following line (> = Integer Basic)

```
10 PRINT "THE APPLESEED MAGAZINE  
PRESENTS PROGRAMMING TIPS."  
20 END
```

Note the mistake in the word 'programming'. We are going to correct this mistake without typing in the complete line.

Now list line 10. You should see the following:

```
10 PRINT "THE APPLESEED MAGAZINE PR  
ESENTS PROGRAMMING TIPS."
```

Using the ESC editing keys, put the cursor over the 1 and use the right arrow to copy the entire line (press the arrow and the REPT key) up to the error. Type in RA to make the correction in the word programming.

Now if you list line 10 you should see the following:

```
10 PRINT "THE APPLESEED MAGAZINE PR  
ESENTS PROGRAMMING TIPS."
```

It doesn't look much different than the original, but wait. Now run the program. It should say:

```
THE APPLESEED MAGAZINE PR ESENTS PROGRAMMING TIPS.
```

The reason this happened is that you copied over a number of blank spaces when you used the right arrow and the REPT key.

The Apple II presents 40 characters in a line and when you run the cursor all the way to the end and back down again, you copied into memory these blank spaces. The cure is simple!

Before you do any editing, clear the screen and then type in POKE 33,33 (RETURN). This tells the Apple to restrict the screen width to 33 characters. Now do all the correcting you want and don't worry about those unwanted blank spaces.

When you are completed, return the Apple to its original state by typing POKE 33,40 (RETURN), or type in TEXT (RETURN).

We will discuss the screen width and length (called the screen window) in a further PROGRAMMING TIPS column.
