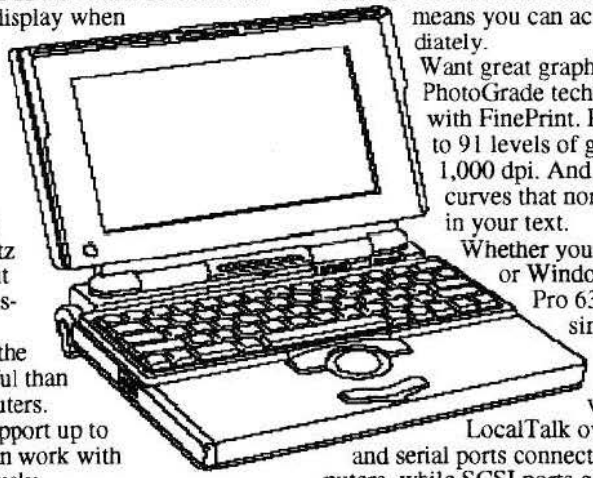
NEW MACS NEW PRINTERS

With the Mac PowerBook 165c,

the impact and appeal of a bright, vivid color display is now available on a portable Macintosh computer. The PowerBook 165c delivers the processing speed, flexibility, and convenience you need—all in a package that weighs just seven pounds and fits into a briefcase.

The Macintosh PowerBook 165c features a backlit passive-matrix display that gives you 256 brilliant colors. And you can also connect to a larger display when you're not on the go. Just connect the PowerBook 165c to almost any Apple display, or even VGA and SuperVGA displays, and expand your workspace.



The Macintosh PowerBook 165c takes advantage of a 68030 processor running at 33 megahertz and a powerful floating-point unit (FPU) to provide superior processing power for even the most demanding applications. In fact, the PowerBook 165c is more powerful than many mainstream desktop computers. And the PowerBook 165c can support up to 14 megabytes of RAM so you can work with multiple applications simultaneously.

With the Macintosh PowerBook 165c, you'll find all the connections you need to work anywhere. AppleTalk networking is built in, so you can connect to the AppleTalk network and receive your electronic mail, have access to servers, or share files—even if you're halfway around the world. And there are seven built-in ports for plug-and-play access to peripherals such as modems, scanners, and external storage drives.

See New Macs: Continued on Page 3

The Apple LaserWriter Pro 630

provides unsurpassed print quality for your work group needs in the most demanding Macintosh or Windows computing environments. In fact, no other printer in this class offers image quality so impressive.

With true, 600 dots-per-inch (dpi) resolution, the LaserWriter Pro 630 lets you print text at four times the resolution of conventional laser printers. In many cases, this means you can achieve camera-ready results immediately.

Want great graphics and images? See what Apple's PhotoGrade technology can show you at 300 dpi with FinePrint. PhotoGrade allows you to print up to 91 levels of gray—that's the equivalent of 1,000 dpi. And FinePrint smooths out lines and curves that normally appear jagged in your text.

Whether you work with Macintosh, MS-DOS, or Windows computers, the LaserWriter Pro 630 provides the plug-and-play simplicity you need for increased productivity. Connect easily into high-speed EtherTalk networks via built-in Ethernet, or tap into LocalTalk over an AppleTalk network. Parallel and serial ports connect you to DOS and Windows computers, while SCSI ports give you the option of attaching an internal or external hard drive for large-capacity font storage. All ports stay active so you can send documents to any port without having to change a single setting.

For added flexibility, the LaserWriter Pro 630 comes with two paper trays and an expandable array of options including a 500-sheet feeder and a 75-envelope feeder. With a total paper-handling capacity of 850 sheets, the LaserWriter Pro 630 packs many features into a compact design and gives you much more in print quality and power.

4 SALE.....9
Minutes of the February Meeting.....10

Minutes *Continued from Page 10*

Continuing in his role as Apple II Beagle Buddy, Jim Clark has the upgrade to *TimeOut Grammar* available for interested members at a cost of only $3.00, a royalty paid to Quality Computers. Though Beagle Bros is no more the Beagle Buddy program lives on through Quality Computers. In response to a question from member Mel Ellis as to the latest version of *UltraMacros* (3.1 is the latest version), Jim advised that the latest version numbers of the entire TimeOut series would be in the February newsletter (See Hints & Tips).

Jim reminisced that when RNAUG started in 1986, 99% of the membership had Apple IIs and the Mac SIG was started to attract more members. Today, 29% of teh members have an Apple II, 48% have a Mac, 18% have both, and 5% have both a Mac and a MeSsyDOS PC. Among the RNAUG officers, 20% have an Apple II, 20% have a Mac, and 60% have both.

Several offers have been made available to RNAUG members including two new magazines. For the Apple II, there is a subscription handout for Quality Computer's new *II Alive*. For the Mac, there is the *Mac Home Journal*. Also for the Mac, Ventura Press is offering their *MacArcade* collection of games to user group members for $20.00, 30% off the retail price. Jim Clark got the original deadline of 1 March extended to 1 April so that we could get the coupon into the newsletter.

RNAUG reaped a windfall of $580.00 thanks to FedSoft Corp., makers of *FedForms*, and some alert thinking by officers Jim Clark and Don Wilder. It seems that Jim's office at USAREUR headquarters got a copy of the demo disk from RNAUG, liked the forms, and ordered 116 copies. Tech Rep Don noticed that with the registration came an offer to donate $5.00 to a supporting user group with every registration returned. After checking with the Office of the Staff Judge Advocate, RNAUG was entered on all 116 registration cards. The result — a check for $580.00.

One of the first actions taken to put that money to good use for the membership, was a motion to renew RNAUG's subscription to *The AppleWorks Educator*, at a cost of $35.00 per year. The *Educator* provides us a much needed source of Apple II articles and information for the newsletter. The motion was approved by a majority vote.

In a correction to *Clif Notes* in the January newsletter, it was pointed out that Apple's simplified interface for the Mac, *At Ease*, can indeed save to a hard drive. It can also save to a hard drive and add new buttons to access the new files.

Jim Clark closed the general session by summarized the discussions of a recent officers meeting which included several proposals to purchase items for the membership. The members present approved the expenditure of up to $200.00 for more Apple coffee mugs as door prizes. Member Alex Hermannn offered to check on the most current styles and pricing. Also under discussion was the purchase of either 1) a regular, large hard drive; 2) a removable hard drive; or 3) a CD-drive to revitalize RNAUG's public domain library. MacSIG Chair Ned Langston prepared an analysis of the choices and provided it to the other officers for further review.

In the Apple II session, Jim Clark and Alex Siegfried discussed upgrade options for the Apple IIc such as adding RAM memory with Applied Engineering's Z-RAM Ultra 3 or a faster processor like a 4 or 8 MHz ZIP-CHIP. Also discussed were desktop publishing with *Publish-It! 4*, and using the TimeOut series of programs with *AppleWorks*. (The latter convinced new member Larry Saunders that it was high time to upgrade to *AppleWorks* 3.0. He had been using version 1.1) Member Nathan Slate, a IIGS owner, discussed his use of *BeagleWrite GS*, an Apple II program with a very Mac-like graphical interface. Alex had high praise for WestCode Software's *PointLess 2.0*, a significant upgrade with increased speed. *PointLess* brings TrueType font technology to the Apple IIGS.

In the Mac session, Mike Vargo demonstrated several CD-ROMs on his new Mac IIvx with built-in CD-ROM drive. Included were two living books—*Grandma & Me*, and *Arthur's Teacher Troubles*—, the *AppleLink CD-ROM*, and the *Apple Reference Presentation Library*. And the upgraded *QuickTime 1.5* showed off its improved video capabilities.

New Macs *Continued from Page 1*

Macintosh Centris 610 provides an

affordable way to take advantage of the power of the 68040 microprocessor: the Apple Macintosh Centris 610 desktop personal computer. Like all Macintosh Centris computers, the Macintosh Centris 610 delivers the high performance you need to get the job done in a demanding environment, while giving you the flexibility to configure your system to meet your needs today and tomorrow.

Up to two times as fast as the Macintosh IIvx and IIci, the Macintosh Centris 610 has the horsepower to handle sophisticated graphics and multi-media applications as well as mainstream business programs. And the Macintosh Centris 610 supports up to 68 megabytes of RAM, so you can work with multiple applications simultaneously.

The Macintosh Centris 610 provides built-in support for all Apple displays. What's more, the Macintosh Centris 610 is equipped with 512K of on-board video RAM (expandable to 1,024K), so you get more colors than ever from your display without having to purchase an additional video card.

The Macintosh Centris 610 gives you flexibility and choice. You can choose an internal hard disk with storage capacity from 80- to 500-MB, opt for on-board Ethernet networking, add an internal CD-ROM drive, install a NuBus or processor-direct card, and even connect two displays. A high-speed SCSI interface lets you add additional peripherals, such as scanners or high-volume storage devices. And AppleTalk networking is built in.

Macintosh Centris 650

Designed for performance and flexibility, the Apple Macintosh Centris 650 is the most expandable Macintosh Centris computer. Like all Macintosh Centris models, the Macintosh Centris 650 is ideal for mainstream business and professional users.

Based on the fast, 25-megahertz Motorola 68040 CPU, the Macintosh Centris 650 provides affordable high performance. The Macintosh Centris 650 comes with 4 megabytes of RAM and a built-in 8K cache for speed up to 2.5 times that of the Macintosh IIci and IIvx. For increased performance, you can expand memory up to 132 megabytes or add an optional math coprocessor.

You can use the Macintosh Centris 650's expandablity to set up a system that meets your exact needs, or to increase your computing power as your needs grow. Customize your system by adding NuBus expansion cards in the three expansion slots provided, or with an on-board networking capability add an Ethernet option. The Macintosh Centris 650 comes standard with an internal hard drive, and its high-speed SCSI interface lets you add additional high-volume storage devices, such as the AppleCD 300i internal CD ROM drive, so you can run CD-ROM applications in brilliant color.

Apple Macintosh Color Classic

Brilliant color, plus the convenience and affordability of a Macintosh Classic computer, makes the Apple Macintosh Color Classic the ultimate personal Macintosh. The Color Classic adds a crisp, high-resolution, 256-color Trinitron display to the familiar Macintosh Classic all-in-one design. Now you can run Macintosh applications in dazzling color—on a computer that's easy to set up and move from room to room.

The Macintosh Color Classic adds a new level of expandability to the Macintosh Classic line. It provides easy access to the logic board for upgrades. An expansion slot lets you add standard Macintosh LC processor-direct cards such as the Apple IIe Card, Apple Ethernet LC networking card, or even an NTSC video-out card. You can expand memory up to 10 megabytes, or install a video memory upgrade to display over 32,000 colors.

The Macintosh Color Classic also offers innovations in ease of use. Screen and volume controls are located on the front of the computer, so they are easy to adjust. The power switch is located on the keyboard, and built-in software prevents you from accidentally turning the computer off. For energy conservation, the Color Classic includes a program to put the computer in a power-conserving standby mode when you aren't using it.

Like all Macintosh Classic computers, the Macintosh Color Classic is easy to set up. Because system software is installed at the factory, you simply plug in the computer and begin your work. You can run any of the thousands of available Macintosh applications. And the Color Classic, with its built-in QuickTime software and support for optional SCSI CD-ROM drives, is ideal for colorful multimedia applications and Photo CD technology.

New Printers *Continued from Page 1*

With the LaserWriter Pro 600

laser printing in Macintosh and Windows computing environments never looked better in terms of work group value and performance. Its impressive print quality and paper-handling capabilities help you produce consistent, superior results—page after page. And the LaserWriter Pro 600's new, compact design packs many features into a small size.

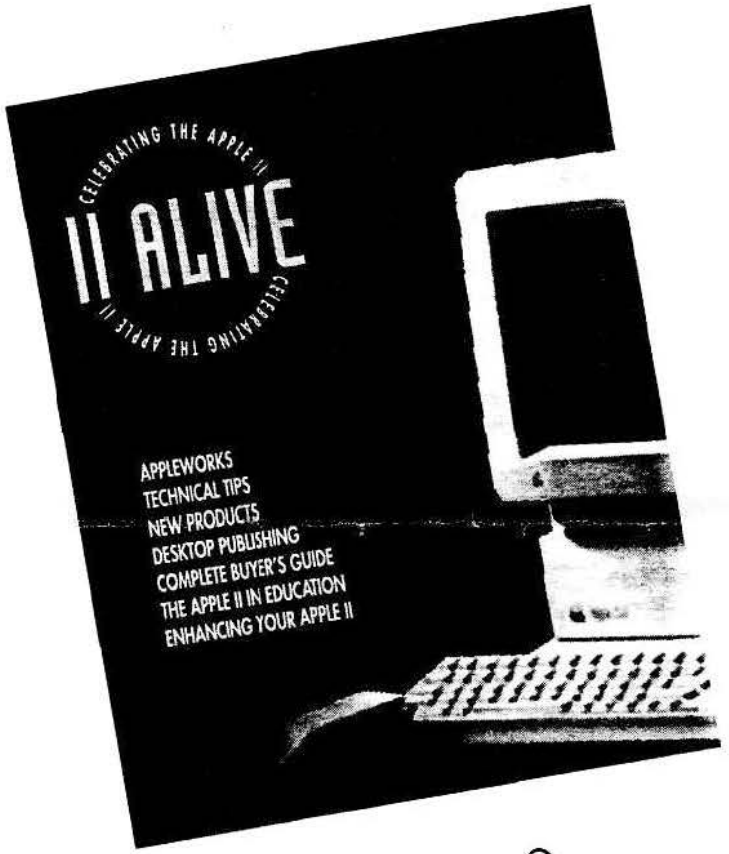
Whether you work with Macintosh, MS-DOS or Windows computers, the LaserWriter Pro 600 provides the plug-and-play simplicity you need for greater productivity. It comes with built-in LocalTalk for easy connection to an AppleTalk network system, as well as parallel and serial ports for connection to DOS and Windows computers. All ports stay active so you can send documents to any port without having to change a single setting.

The LaserWriter Pro 600 comes with two paper trays and options that include a 500-sheet paper cassette and a 75-envelope feeder. That brings total paper capacity to 850 sheets.

At 300 dots-per-inch (dpi) resolution, Apple's FinePrint technology takes the curves or jagged edges out of your text to give you crisp, clean output. You can also choose from the 64 TrueType fonts in the Apple Font Library. In addition, the LaserWriter Pro 600 includes the latest version of Adobe PostScript Level 2 software.

To enhance graphic images and text, try Apple's PhotoGrade technology. With the PhotoGrade Upgrade Kit, you can print images with more than 91 levels of gray—the equivalent of 1,000 dpi—or print at 600 dpi to get high-quality text.

All Apple II. No Compromise.



FREE VIDEO WITH PAID SUBSCRIPTION

THE RUMORS

The Apple II is dead. The Apple II is outdated. The Apple II is not supported.

THE FACTS

Hundreds of new software titles are published for the Apple II every year—from shareware to major commercial products. AppleWorks is the biggest selling, most widely used program of all time. More than 50% of computers used in American schools are Apple IIs. The Apple II can do everything that comparable computers can do. **There is now a magazine dedicated to this marvelous machine.**

II ALIVE

II Alive covers the world of the Apple II. AppleWorks. Shareware. Technical Tips. Multimedia. System 6. Education. New Products. Desktop Publishing. Programming. Reviews. It's all there. All Apple II. No compromise. It's the kind of support you'll only find in *II Alive*.

HOW TO GET II ALIVE

One year of *II Alive* (6 issues) is only $19.95 and comes with the free video about the Apple II called "Celebrating the Magic." Satisfaction is guaranteed. You can cancel any time for a full refund. Even if you do, you can keep the video. Order yours today.

I want II Alive

- ❑ I will get 1 year (6 issues) for $19.95
- ❑ I will get the free Apple II video.
- ❑ I can cancel at any time and get a full refund.

BUGS and TIPS

by Hank Lavagnini

MS Works Bug (Mac)— There is a conflict between Works 3.0 and SuperBoomerang 3.0.2 from the NOW Utilities collection. When you start Works and at the opening dialog box you select **New** (or if you cancel the dialog and select **New** from the **File** menu) Works will quit with the message "..the application "unknown" has unexpectedly quit...type 2 error". The solution is to upgrade SuperBoomerang to 4.0.1.

MS Works Tip (Mac)—If you find that the Spelling Checker in MS Works 3.0 doesn't always suggest alternative spellings, go to the Spelling dialog box and press **Options**. In that dialog, check the option for **Always Suggest**.

Adobe Type Manager Upgrade (Mac)—Adobe has a $7.50 upgrade to take ATM to version 3.0 which supports the new Fonts folder System 7.1. Call 800-521-1976, ext 4400, or fax 303-792-2231.

PhoneNet Talk Upgrade (Mac)—Farallon announced on 07-Dec-92 the availability of version 3.0 of their PhoneNet Talk software. Upgrades are available free to orders purchased after 15-Oct-92. Farallon—800/678-5075.

Likewise (Mac)—This little $129 network utility from Apple hasn't gotten a lot of press, but I've heard good things about it. Quite simply, **Likewise** allows you to set up multiple Macs over a network with identical files and system settings, a task many network administrators want to do. Apple says **Likewise...**

* Configures an entire classroom at the click of a button.
* Downloads system and application programs to all Macintosh computers at once.
* More affordable and more precisely focused than sophisticated network management software.
* Easily selects network zones for configuration.
* Can update system files from a remote location.
* Allows automatic restart or shutdown after transfer.
* Administrator can update Client's system files, change Client systems to new settings, or rename all Client hard disks.
* Compatible with any AppleTalk network using LocalTalk or Ethernet.

[Info from Adam Engst in TidBITS. Contact Apple Computer, Inc. at 800/950-2442]

TypeStyler Upgrade (Mac)—A new version of Broderbund's TypeStyler program which DOES work with System 7.1's Fonts Folder is now available. Call Broderbund at 1-800-521-6263 to order (it's the voice mail option #4 for upgrades); upgrade price from version 2.0 is $10 plus $2.50 shipping for version 2.0.2.

Above articles reprinted with permission from TidBITS, copyright Adam & Tonya Engst. TidBITS is a free, weekly electronic newsletter that covers the computer industry with emphasis on the Macintosh and electronic communications.

Copying AppleWorks 2.0 (Apple II)—When making working copies, you must accept the default volume name of /APPLEWORKS for both the Startup disk and the Program disk. If you change the volume name to something else, the program will not boot properly. When the system utility formats the disk and asks for the volume name, just press RETURN to accept the defaul name.

VENTANA
PRESS
NEWS

Dear Macintosh User Group Manager,

You included "having more fun with my computer" in your New Year's Resolutions, right? Okay, even if you didn't, there's still time — and Ventana Press is here to help.

"Nasties!"

Crack open ***MacArcade: Don Rittner's Top Shareware Game Picks***, and prepare for epic battles with flying nasties and treacherous journeys in your paper airplane! In addition to listing the top 40 shareware games for Systems 6 & 7, ***MacArcade*** includes ten great games on two disks, ready to pop into your computer and play.

MacArcade thoroughly explains the wonderful world of shareware, freeware and beerware programs and guides you to their sources on America Online, GEnie and CompuServe. The introduction gives details on subscribing to these services and the necessary hardware and software configurations. An appendix includes advice on where to find games on disks.

MacArcade: Don Rittner's Top Shareware Game Picks
200 pages, 2 disks
suggested retail price: $27.95

"Shoot-'em-up!"

Hackers in your group or teenagers in your home will find inspiration in the shareware authors' own stories of their games' evolutions which accompany game descriptions, hardware requirements and playing tips. And Rittner invites readers to suggest games for inclusion in future editions of ***MacArcade*** by filling in the card at the back of the book.

"Nasties!"

Special Offer to User Groups

While the book pays for itself at the retail price with the savings in quarters you no longer spend at video arcades, Ventana Press is offering *MacArcade* at the following special price to user groups: **until March 1, 1993, user group members can purchase single copies of *MacArcade* at 30% off the retail price.** To take advantage of this special price of $20, fill in the coupon on the reverse and mail it to Ventana Press, P.O. Box 2468, Chapel Hill, NC 27515, or FAX 919/942-1140, by March 1, 1993. Please feel free to distribute this coupon to your members.

Mailing Address:
P.O. Box 2468
Chapel Hill, NC 27515

Phone 919/942 0220
FAX 919/942 1140

Courier Address:
110 E. Main Street
Carrboro, NC 27510

(Of course, all Ventana titles, including *The Mac Shareware 500, The Official America Online Membership Kit & Tour Guide, The System 7 Book, Looking Good in Print* and *Voodoo DOS*, are always available at Ventana's standing discount to user groups: 50% off for orders of ten or more units and 20% off for single orders. Titles may be mixed, and the user group name must accompany the order.)

We hope we've helped with your New Year's Resolutions. When you take a break from having fun, give us a call!

Sincerely,

Diane Lennox

Minutes of February Meeting

Ramstein Expo Coming; RNAUG reaps Windfall

Mark Twain Village, Heidelberg—February 11, 1993 RNAUG President Jim Clark opened the February meeting to a full house of 31 members and 7 guests. He reminded all that the next meeting will be on 11 Mar 93, 7 PM, Room 263, Heidelberg High School and that Sunday, 14 February is Valentine's Day — a good opportunity to boot up a program like Print Shop and design a special card for someone special to you. Earlier, Treasurer Paul Kostelnik did brisk business selling disks and ribbons, renewing memberships and signing up new members. Member Mike Vargo handed out copies of a new 16 page Apple brochure titled, *An Introduction to Macintosh: Why Do People Chose Macintosh*, which includes information about the entire Mac line to include the new LCIII and the Centris series.

The Ramstein Air Base Community Recreation Center will host a computer information EXPO on Saturday, 3 Apr 93, 10 AM to 5 PM. Many vendors will be there and are free to sell their products. Apple retailer AMEXTRA will be there but the EXPO is not just Apple specific. RNAUG has been invited to participate and offered the use of a table or two at no charge. Member Alex Herman, who will be working at the AMEXTRA display, did ask for about 100 extra copies of the *RNAUG Newsletter* and membership applications to hand out. Alex felt the *RNAUG Newsletter* is the best he had seen in Europe of any computer club.

Several members complimented the colors used in the January issue of the *RNAUG Newsletter* and asked how it was done. Newsletter originals are printed out by Secretary/Editor Hank Lavagnini on his Hewlett-Packard DeskWriter C inkjet printer. The black and white pages, including the black and white parts of the title page were then reproduced on a copier. The copies of the front page were then run through the printer again to add the color objects. This is a very time consuming process and we won't be doing it on a regular basis. Jim did offer to see if we couldn't have color mailing labels for February.

The RNAUG membership database is back up to 106 records (including 11 honorary and 5 temporary memberships) but we have received only 62 regular annual renewals to date. Jim ask that members who have not renewed do so if they wish to continue receiving the newsletter and other benefits. The honorary and temporary memberships are only for the purpose of receiving the newsletter or other RNAUG information. Memberships not renewed will be deleted for April.

Jim ran down the price list and reminded all of our reinking service for black ImageWiter I and II ribbons. Member John Wothe, who is providing the service, held up a jumbo poster to reemphasize the point. As RNAUG's reinker is showing it's age by getting ever slower, John has been using his own reinker. A new reinker may be called for.
