

# THE APPLE INTERFACE MANUAL

## **THE APPLE INTERFACE MANUAL**

The Apple Interface Manual contains information on the following:

- switch settings
- pin outs
- necessary driver settings
- interface cables

We have given you the facts on all possible connections between the different Apple products, and have suggested configurations to help you to get the equipment up and running quickly and easily.

We hope the Apple Interface Manual will help you to speed up the process of installing Apple equipment and to cut back on those expensive, time-consuming telephone calls to Apple.

Reproduced compliments of Apple Technical Support, Cupertino, California.

October 20th 1984

Compiled by Clive Girling and Ian Summerfield.

## Parallel/Centronics Card

Part # 820-0005-01 (Discontinued)

These two cards although different in name are virtually identical apart from those differences outlined below.

### Pin Outs (same for both cards)

<u>20 Pin Header</u>	<u>Signal Name</u>
1 .....	Ground - Pin 1 and 20 must be used.
2 .....	ACK (Handshake)
8 .....	Strobe
10 .....	DP0 (LSB)
11 .....	DP1
12 .....	DP2
13 .....	DP3
14 .....	DP4
15 .....	DP5
16 .....	DP6
17 .....	DP7 (MSB)
20 .....	Ground - Pin 1 and 20 must be used.

Note: The differences between the two cards are as follows.

Centronics: The Centronics card is supplied with the PROM P9 (341-0019) installed and does NOT add a linefeed after carriage return. The Jumper block is pre-configured for negative STROBE and positive acknowledge (ACK) signals.

Parallel: The Parallel card is supplied with the PROM P1 (341-0005) installed and does add a linefeed after carriage return. With this card you must wire the jumper block yourself. For further information please refer to page 6 of the manual.

# Apple Communications Interface

Part # 670-X003 (Discontinued)

## Pin Outs

<u>DB-25 Connector</u>	<u>Signal Name</u>
2 .....	Transmit Data (Tx)
3 .....	Receive Data (Rx)
4 .....	Request To Send (Permanently high)
5 .....	Clear To Send (Permanently high)
7 .....	Signal Ground

Note: This card does not have any hardware handshaking. It can therefore only be used at slow baud rates.

# *Apple //c Interface Ports*

## *Contents*

<b>Page</b>	<b>Description</b>
B.2 . . . . .	Serial Ports
B.3 . . . . .	Video Port

## Printer & Communication Ports

### Pin Outs

The Serial ports on the //c are standard 5 pin DIN, however, they are **not** labelled as standard DIN. So when looking at the back of the //c we have pin outs as follows:-

<u>5 Pin DIN</u>	<u>Position</u>	<u>Signal Name</u>
1 . . . . .	4 O'Clock	... Data Terminal Ready
2 . . . . .	5 O'Clock	... Transmit Data
3 . . . . .	6 O'Clock	... Ground
4 . . . . .	7 O'Clock	... Receive
5 . . . . .	8 O'Clock	... Data Set Ready

**Note:** The serial ports on an Apple //c are essentially identical, the pin connections being the same on both. The main difference being the printer port is preconfigured for 9600 baud and the communication port is preconfigured for 300 baud. The printer port appears to software as slot 1, the communication port as slot 2. The settings of these ports can be changed with the Apple //c System Utilities disk. Please see the System Utilities manual for precise details.

### Characteristics at Startup

After power-up, the printer firmware sets the configuration given below:

9600 baud	8 data bits	No parity bits
2 stop bits	80 chars per line	LF after CR
Command character is CTRL-I		

## Video Port

This port requires an external PAL modulator to connect to a TV set. It is **NOT** an RGB port, to connect to an RGB monitor an external piece of hardware is required.

### Pin Outs

15 Pin Connector	Signal	Description
1	TEXT	Video text signal from GLU
2	14M	14MHZ Timing signal from master oscillator
3	SYNC	Display synchronisation signal from IOU pin 39.
4	SEGB	Display Vertical counter bit from IOU pin 4.
5	1VSOUND	1v sound signal.
6	LDPS	Video shift Register load enable.
7	WNDW	Active area display blanking.
8	+12V	Regulated +12v.
9	PRAS	Ram row address strobe.
10	GR	Graphics mode enable.
11	SEROUT	serialised character generator output.
12	NTSC	Composite NTSC video signal.
13	GND	Ground.
14	VIDD7	Causes half dot shift if high.
15	CREF	Colour reference signal.

# *Apple /// Interfaces*

## *Contents*

<b>Page</b>	<b>Description</b>
C.2 . . . . .	Serial Card ///
C.2 . . . . .	Serial Port
C.4 . . . . .	Parallel Interface Card (UPIC)
C.6 . . . . .	Colour Video Port

## Port C: RS-232-C Serial Interface & Serial Card 3.

### Pin Outs

<u>DB-25 Connector</u>	<u>Signal Name</u>
1 .....	Shield Ground
2 .....	Transmit Data (Tx)
3 .....	Receive Data (Rx)
4 .....	Request To Send (RTS)
5 .....	Clear To Send (CTS)
6 .....	Data Set Ready (DSR)
7 .....	Signal Ground
8 .....	Data Carrier Detect (DCD)
20 .....	Data Terminal Ready (DTR)

**Note:** Serial Card 3 has a modem eliminator button, when this button is "in" the above pin outs are correct. If the button is "out" this has the effect of a modem eliminator cable being installed (see page G.2).

## Port C: RS-232-C Serial Interface & Serial Card 3.

The following table explains how to configure the driver for the RS232 port using System Utilities, remember on the Serial Card 3 driver to set the slot number.

### Data Configuration Block

	\$00	\$01	\$02	\$03	\$04	\$05	\$06	\$07	\$08	\$09	\$0A	\$0B
<b>Baud Rate:</b>

ETX/ACK			H			\$40	\$03	\$06			\$50	\$00
HW Handshake			R			\$00			\$0F	\$04		\$00

### Delays (bytes \$02...\$04).

Using this driver to connect to a printer may require that you set delay times while the printer advances to a new line or the top of a new page. These delays are given in the range \$00...\$FF characters. The RS232 driver will wait for the time taken to transmit the amount of characters specified before it sends the following character.

# Universal Parallel Interface Card (UPIC)

Part# 670-0017 Order# A3B0002

## Pin Outs

### 20 Pin Connector

Pin Number	Signal	Pin Number	Signal
1	Signal Ground	11	Port A output D01

19	Port B input D15	39	Signal ground
20	Port A output D00	40	Signal ground

## Universal Parallel Interface Card (UPIC)

### Data configuration block

Commonly used configurations for the driver .PRINTER on the SOS 1.3 Update diskette are listed in the following table.

Printer	Device configuration block (DCB) values				
	ERRMASK	ERRSTAT	AUTOLF	CTRLWRD	TIMEOUT
	00	01	02	03	04
Centronics 779/700	E0	C0	40	00	0A
Centronics 730/737	C0	C0	00	00	5A
Anadex DP-8000	E0	C0	00	00	5A
Printronic P300	E0	C0	00	00	0A
C.Itoh 8510A	E8	C8	40	00	0A
IDS 440/445/460	60	40	00	00	5A
Epson MX-80	E8	C8	00	00	0A
TI 810	E8	C0	00	00	0A
Any printer connected with Apple ][ cable	00	00	00	00	0A

For further information on the Data Configuration Block please refer to page 19 onwards of the Universal Parallel Interface card manual.

**NOTE:** The driver .PARALLEL is used for two way communications i.e. for input and output, when using the 40 pin connector. This driver has a three byte configuration block. Please refer to pages 29 onwards in the manual for more information.

## Colour Video Port

### Pin Outs

DB-15 Connector	Signal Name
1 .....	Shield Ground
2 .....	XRGB4 - One of 4 RGB outputs. This (and pins 5, 9 & 10) is a TTL output with instantaneous colour information. A linear-weighted sum of these four signals will form a true 16 colour RGB video signal.
3 .....	SYNCH - Composite negative sync signal.
4 .....	PDI - Not used
5 .....	XRGB1 - See pin 2
6 .....	GND - Power & Signal Ground
7 .....	-5V - Maximum load 200 mA
8 .....	+12V - Maximum load 500 mA
9 .....	XRGB2 - See pin 2
10 .....	XRGB8 - See pin 2
11 .....	BWVID - NTSC B&W Composite video with negative going sync, 1 volt peak to peak into a 75 ohm load.
12 .....	NTSC - NTSC Colour video with negative going sync, 1 volt peak to peak into a 75 ohm load.
13 .....	GND - Power & Signal Ground
14 .....	-12V - Maximum load 200 mA
15 .....	+5V - Maximum load 1 Amp.

**Note:** All power supply ratings assume that no peripheral cards are installed in the system. If there are cards in the system, the current drawn by those cards counts as part of the total current available for each supply.

# *Macintosh Interface Ports*

## *Contents*

Page	Description
D.2 . . . . .	Serial Ports

# Macintosh Communications

## Connectors

### RS422

The following pin connections apply to both the communications and printer interface ports.

#### Pin Outs

DB9 Connector	RS232 Signal Name	RS422 Signal Name
1	Chassis Ground	Ground
2		+5V
3	Signal Ground	Ground
4		Tx+
5	Transmit Data (Tx)	Tx-
6		+12V
7	Handshake (DSR)	Handshake
8		Rx+
9	Receive Data (Rx)	Rx-

**Note:** Macintosh uses pin 7 as an input when communicating to printers in order to determine whether the printer is ready to receive data (hardware handshaking). Macintosh uses software handshaking for connecting to remote computers/terminals.

# *Lisa Interface Ports*

## *Contents*

<b>Page</b>	<b>Description</b>
E.2 . . . . .	Serial Ports

## Lisa Serial Ports

### Pin Outs

DB-25 Connector	In/Out	Serial A - Signal Name	Serial B - Signal Name
1	..... - ..	Protective Ground	Protective Ground
2	..... OUT .	Transmit data	Transmit Data
3	..... IN ..	Receive data	Receive Data
4	..... OUT .	Request To Send	Not connected
5	..... IN ..	Clear To Send	Not connected
6	..... IN ..	Data Set Ready	Data Set Ready
7	..... - ..	Signal Ground	Signal Ground
8	..... IN ..	Data Carrier Detect	Not connected
15	..... IN ..	Transmit Clock	Not connected
17	..... IN ..	Receive Clock	Not connected
19	..... IN ..	Not connected	Receive Data Minus
20	..... OUT .	Data Terminal Ready	Data Terminal Ready
24	..... OUT .	Transmitter Clock	Not connected

**Note:** Lisa Office System software (e.g. LisaTerminal) uses full duplex, asynchronous communication lines. The lines are attached to Serial A or Serial B on the back of the Lisa. Serial A and Serial B are 25-pin connectors that meet the requirements of EIA specification RS-232-C.

Serial A and B are wired differently. The Serial A connector is wired for full modem control signals. Serial B is wired with a special crystal oscillator that allows it to get all the common baud rates. Serial A uses the system clock and, as a result, cannot generate 3600 and 19200 baud.
